15. Support of M3P Letter - Spanish Language..... 51

16. Inventory Flow Enhancements:..... 53

17. Security Rights for the request screens..... 60

Enhancement Overview

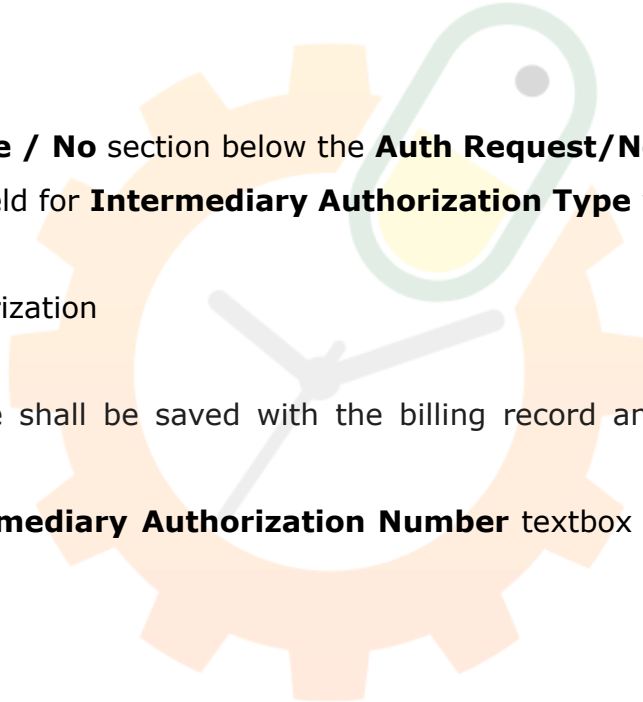

1. Intermediary Authorization Support

This enhancement introduces support for **Intermediary Authorization Type ID (463-EW)** and **Intermediary Authorization Number Submitted (464-EX)** within the NCPDP D.0 claim workflow.

Key Enhancements:

1. Billing Modal Enhancements

- Added a new **Inter. Auth Type / No** section below the **Auth Request/No** field.
- Introduced an autocomplete field for **Intermediary Authorization Type** with the following options:
 - 00 – Not Specified
 - 01 – Intermediary Authorization
 - 99 – Other
- **Behavior:** The selected value shall be saved with the billing record and used to dictate downstream claim transmission logic.
- Added an alphanumeric **Intermediary Authorization Number** textbox supporting up to **11 characters** with validation on maximum length.

Insurance Summary

Insurance *	AETNA	
Claim Priority *	Primary	
Claimed *		\$23.00
Status *	To be claimed	
Other Coverage Code:	00 - Not Specified By Patient	
OCC Override:	☐	
Submission Clarific...		☐
Eligibility Clarificati...		☐
Auth Type:		
Auth Request/No:		
Inter. Auth Type/No:		
Delay Reason Code:	00 - Not Specified	
	01 - Intermediary Authorization	
	99 - Other	
Basic of Reimburse...		00
Basic of Calculation...		00
Incentive Paid:		\$0.00
Copay:		\$0.00

2. Conditional B1 Claim Transmission

- Added support for NCPDP fields:
 - **463-EW – Intermediary Authorization Code**
 - **464-EX – Intermediary Authorization Number Submitted**

- Implemented conditional transmission rules to ensure fields are transmitted only when valid combinations of authorization type and authorization number are provided.

Conditions are:

- When **Inter. Auth Type** is left blank, **463-EW** and **464-EX** are not transmitted, regardless of whether an Inter. Auth No is entered.
- When **Inter. Auth Type** is **00 – Not Specified** and Inter. Auth No is not entered, neither field is transmitted.
- When **Inter. Auth Type** is **00 – Not Specified** and an Inter. Auth No is provided, the claim transmits **463-EW = 00** along with the entered **464-EX** value.
- When **Inter. Auth Type** is **01 – Intermediary Authorization** and an Inter. Auth No is provided, the claim transmits **463-EW = 01** along with the entered **464-EX** value.
- When **Inter. Auth Type** is **99 – Other** and an Inter. Auth No is provided, the claim transmits **463-EW = 99** along with the entered **464-EX** value.
- When **Inter. Auth Type** is **01** or **99** but the Inter. Auth No is left blank, neither **463-EW** nor **464-EX** is transmitted.
- Configured **B2 (Reversal)** claims to never transmit **463-EW** and **464-EX**, irrespective of the values stored in the billing record.
- Prevents transmission when required values are incomplete or invalid.

3. Rx Claim History Enhancements

- Updated request parsing to capture and display **463-EW** and **464-EX** values in Rx Claim History for improved claim traceability.

Claim Details:		
Request Response		
Description	Field	Value
Other Coverage Code	308-C8	00
Originally Prescribed Product/Service Code	445-EA	50228017805
Special Packing Indicator	429-DT	
Originally Prescribed Quantity	446-EB	60.000
Originally Prescribed Product/Service ID Qualifier	453-EJ	(03) - National Drug Code (NDC)
Unit Of Measure	600-28	(EA) - Each
Level of Service	418-DI	(0) - Not Specified
Prior Authorization Type Code	461-EU	
Prior Authorization Number Submitted	462-EV	
Intermediary Authorization Code	463-EW	(01) - Intermediary Authorization
Intermediary Authorization Number Submitted	464-EX	abv00203001
Quantity Prescribed	460-ET	60.000

4. EMC Template Configuration

- Added both fields to the EMC setup templates.
- Configured **B1 Claim Templates** to always transmit these fields when transmission conditions are met.

Default B1 Claim Active Cancel Changes Delete Save

Name* Claim Form Type* Type* Insurance Carrier/Plan/Type*

Default B1 Claim B1 Claim Insurance Plan All

Description	Field	Default Value	Mandatory	Transmit
Prior Authorization Number Submitted	462-EV		☐	☒
Intermediary Authorization Code	463-EW		☐	☒
Intermediary Authorization Number Submitted	464-EX		☐	☒
Quantity Prescribed	460-EI		☐	☒
Pharmacy Service Type	147-U7		☐	☒

- Configured **B2 Reversal Templates** to never transmit these fields, regardless of stored billing data.

Default B2 Claim Active Cancel Changes Delete Save

Name* Claim Form Type* Type* Insurance Carrier/Plan/Type*

Default B2 Claim B2 Claim Insurance Plan All

Description	Field	Default Value	Mandatory	Transmit
Unit Of Measure	600-28		☐	☐
Level of Service	418-DI		☐	☐
Prior Authorization Type Code	461-EU		☐	☐
Intermediary Authorization Code	463-EW		☐	☐
Intermediary Authorization Number Submitted	464-EX		☐	☐
Quantity Prescribed	460-EI		☐	☐

Benefits:

- Compliance:** Enables full alignment with NCPDP D.0 standards for Intermediary Authorization processing.
- Operational Efficiency:** Allows pharmacy staff to handle manual intermediary overrides directly within the standard billing workflow.
- Claim Accuracy:** Uses conditional logic matrices to drop optional/empty elements, eliminating transmission rejection risks due to formatting errors.

- **Traceability:** Simplifies troubleshooting by parsing and displaying clear authorization data trails within Rx Claim History.

2. P&T Approval Process

This enhancement introduces an automated Pharmacy & Therapeutics (P&T) Approval workflow to ensure prescriptions requiring P&T authorization are identified, tracked, and managed throughout the prescription lifecycle. Based on the Drug Bill To Setup configuration at the CFI and insurance level, the system automatically validates existing approvals, creates tracking records when required, links approval documents, and updates prescription status.

Key Enhancements:

1. Drug Bill To Setup

- Added a new **P&T Approval Required** checkbox in the **Drug Bill To Setup** screen.
- The configuration is maintained at the **CFI** and **Insurance** level.
 - I.e For example, if **MUPIROCIN 2% OINTMENT** is configured in the **Drug/CFI** field and **Internal Plan – Clinic Charge** is selected as the insurance, with the **P&T Approval Required** checkbox enabled, then any prescription for **MUPIROCIN 2% OINTMENT** under that insurance will automatically have the **P&T Approval** status set to **Pending**.
 - A single CFI may be associated with multiple NDCs. If a specific **NDC** is entered in the **NDC** field, the P&T approval requirement will apply only to that NDC. However, if the **NDC** field is left blank and only the **Drug/CFI** is configured, the P&T approval requirement will apply to **all NDCs associated with that CFI**.
- When enabled, the system validates P&T approval for prescriptions matching the configured CFI and insurance combination.

- If the P&T approval checkbox is unchecked the Rx won't be marked as P&T pending.

2. Rx Typing

- Added a new **P&T Approval** field in the Prescription (Rx Typing) screen to display the approval status (**Pending** or **Approved**).
- The field is automatically enabled and set to **Pending** when P&T approval is required for the configured CFI and insurance combination; otherwise, it remains disabled.

- Del. Mode *: Ground
- Pharmacy *: (29466) Solvera Retail ...
- ☐ Profile Only
- ☐ Hold
- ☐ Error

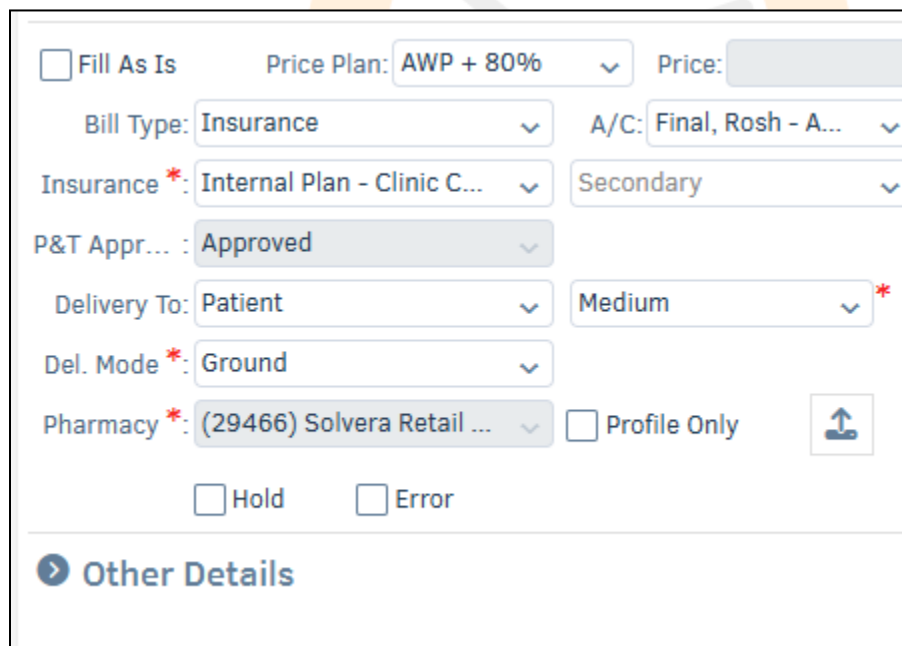

Below the form, there are two expandable sections: "Other Details" and "Summary Section". The "Summary Section" shows the following information:

- Created By: Bhatia, Megha on 07/28/26 10:26 PM
- Last refill Approved on 07/28/26 by ., Jorge
- P&T App. Req. (highlighted with a red box) with a tooltip that says "P&T Approval Required"

- If P&T approval is configured for a drug and that drug is prescribed to the patient but the required insurance is not available with the patient, the prescription is automatically placed on the **Insurance Needed** hold.
 - Billing cannot proceed until the appropriate insurance is added and the P&T approval requirements are satisfied.

- When the consent for the same CFI and insurance already exists with the patient at that time on typing the same prescription the status is auto set to 'Approved' instead of asking for the approval again from the insurance.
 - Users can check if the same CFI exists or not from patient consents > P&T Approval tab.

A screenshot of a prescription form. At the top left is a checkbox labeled "Fill As Is". To its right is "Price Plan:" with a dropdown menu showing "AWP + 80%". Further right is "Price:" with a greyed-out input field. Below these are two rows of dropdown menus: "Bill Type:" with "Insurance" selected, and "A/C:" with "Final, Rosh - A..." selected. The next row is "Insurance *" with "Internal Plan - Clinic C..." selected and a "Secondary" dropdown to its right. Below that is "P&T Appr..." with "Approved" selected. The next row is "Delivery To:" with "Patient" selected and "Medium" selected with an asterisk to its right. Below that is "Del. Mode *" with "Ground" selected. The next row is "Pharmacy *" with "(29466) Solvera Retail ..." selected, a "Profile Only" checkbox, and an upload icon. At the bottom left are "Hold" and "Error" checkboxes. At the bottom is a button with a right arrow and the text "Other Details".

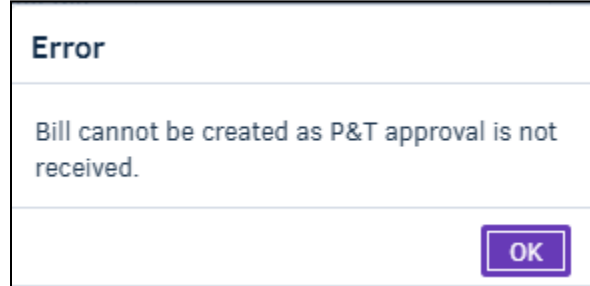

3. Billing Workflow

- **Internal Plan + Electronic Claim Format**

- When the selected insurance is of type **Internal Plan** and the **Claim Format** is **Electronic**, the system allows the prescription claim to be transmitted even if the **P&T Approval** status is **Pending**.
- The claim is transmitted to the internal electronic payer as part of the normal billing workflow.
- Once the claim receives a successful response with a status of **Paid** or **Captured**, the system automatically updates the prescription's **P&T Approval** status from **Pending** to **Approved**.
- If an approved P&T record already exists for the same **Patient + CFI + Insurance**, the prescription is automatically marked as **Approved** during Rx Typing and no additional tracking record is created.

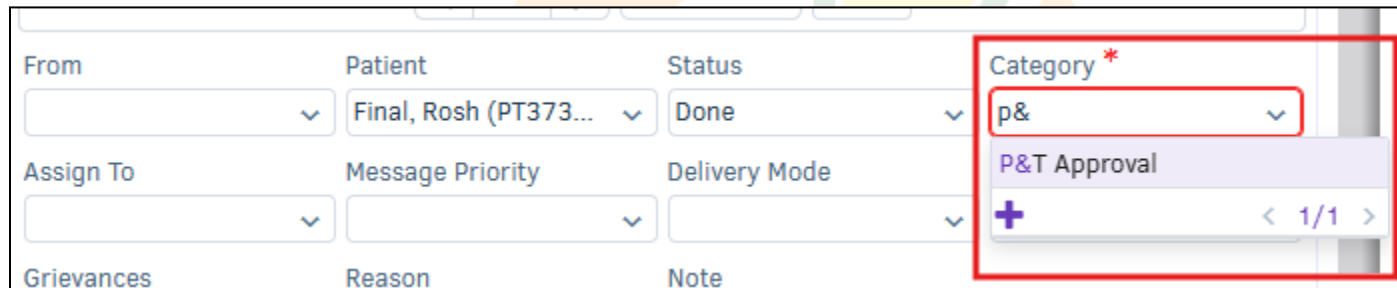

- **Internal Plan + Cash Claim Format**

- When the selected insurance is of type **Internal Plan** and the **Claim Format** is **Cash**, the system does **not** allow bill creation while the **P&T Approval** status is **Pending**.
 - If P&T approval is required and no approved record exists, the prescription remains in **Pending** status and billing is blocked until the approval is obtained.
 - Once the P&T approval status is updated to **Approved** through the **P&T Approval Tracking** screen or by processing a P&T approval document from the Inbox, billing is allowed and users can **manually** create the bill for the same.
 - If the approval is not received and the user manually tries to create the bill the validation will be shown.
- For Insurance other than the Internal Plan it will work as it is working currently without any validation.

4. Inbox Workflow

- Introduced a new **P&T Approval** document category in the Inbox.

A screenshot of a web application's "Inbox" form. The form has several fields: "From" (empty dropdown), "Patient" (dropdown with "Final, Rosh (PT373..." selected), "Status" (dropdown with "Done" selected), "Assign To" (empty dropdown), "Message Priority" (empty dropdown), and "Delivery Mode" (empty dropdown). Below these are three columns: "Grievances", "Reason", and "Note". On the right side, there is a "Category *" dropdown menu. This menu is open, showing a list of categories. The first item is "p&". The second item is "P&T Approval", which is highlighted with a light purple background. Below the list is a plus sign icon and a pagination indicator "< 1/1 >". A red rectangular box highlights the "Category *" dropdown and its open menu.

- Enhanced document processing to allow users to:
 - Users can Import the received approval document and add it in the inbox with category as 'P&T Approval'.
 - Once the patient and the category 'P&T Approval' is added to the document and the user processes it , the window P&T Approval will get opened.

Close

- Introduced a centralized tracking screen displaying:
 - Drug (CFI)
 - Insurance
 - Approval Status
 - Attached Documents
- Automatically creates a tracking record when P&T approval is required and no existing record is available.
 - If the rx is typed and the P&T Pending is received at that time the entry gets created in the P&T approval window.

- Once approval is received through insurance in the case of an internal plan with claim format as electronic it will be marked as approved automatically.
- In the case of insurance type as internal plan and claim format as cash the entry of pending is created and once the approval document is received the status will be marked as approved automatically.

6. Retail Workflow

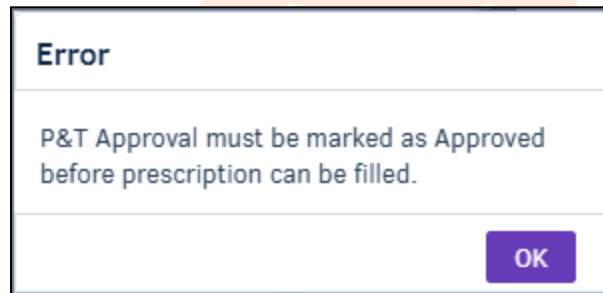

- Having added a filter in the Retail workflow as P&T Approval, users can filter out the data by fetching the data as if they select as pending it will show all the prescriptions with pending approval.

A screenshot of a dropdown menu titled "P&T Approval". The menu is open, showing three options: "All", "Pending", and "Approved". The "All" option is currently selected and highlighted with a blue border.

7. Filing

- If the approval is pending and the user tries to fill the rx it will validate the user that filling is not allowed until P&T approval is received.

A screenshot of an error message dialog box. The title bar says "Error". The main text reads: "P&T Approval must be marked as Approved before prescription can be filled." At the bottom right, there is a blue button labeled "OK".

Benefits:

- **Improved Compliance:** Ensures P&T approval requirements are strictly enforced and tracked.
- **Workflow Automation:** Reduces manual document linking and approval verification for pharmacists.

Scope:**In Scope:**

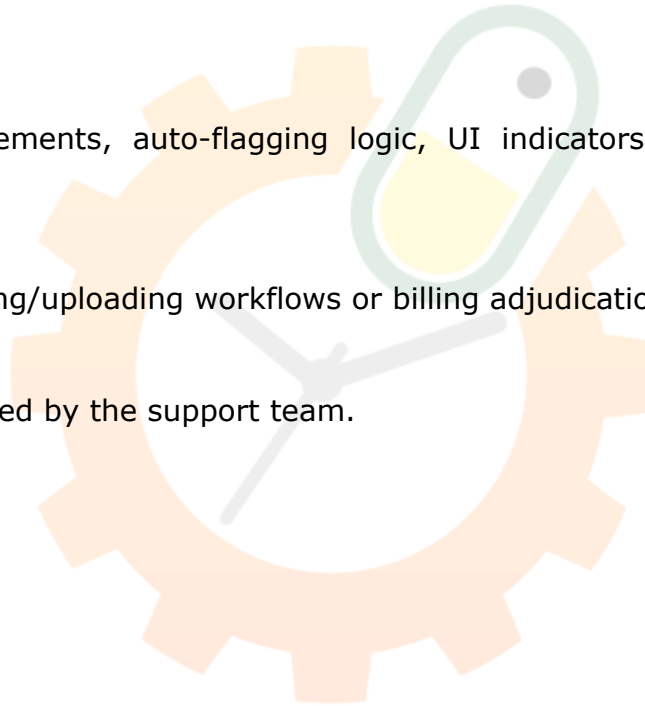

- Drug Bill To Setup enhancements, auto-flagging logic, UI indicators in Typing/PV1, and Patient Profile Dashboard.

Out of Scope:

- Changes to document scanning/uploading workflows or billing adjudication logic.

NOTE:

- Whitelisted drugs will be loaded by the support team.

3. Report: Customer History Report

A new Customer History Report data component has been introduced to support the Claim History Summary Report. This enhancement allows pharmacies to generate configurable customer history reports that provide a printable summary of the copay amount for each prescription.

Key Enhancements:

1. Workflow Setup

- A new data component named **Customer History Report** has been added to **Workflow Setup**.
- To create a report bucket, select **Customer History Report** as the data component while configuring the workflow.

2. Functional Flow

- When a bill is generated with the **Insurance** bill type, a new entry is added to the report.
 - The **Copay Amount** is populated from the **Insurance Receipt**.
 - If no copay is available in the insurance receipt, the copay amount is displayed as **\$0.00**.
- For **Self Pay** bills, if the pharmacy wants to display the patient's financial responsibility in the report, the **Patient Responsible Amount** column must be added to the receipt configuration.
- After an insurance bill is successfully transmitted, the corresponding prescription is automatically included in the report along with its associated **Copay Amount**.
- If the insurance is updated to **Bill Later**, the corresponding prescription associated with that bill is excluded from the report.
- When the report is grouped by **Patient Information**, the selected patient details are displayed immediately below the column headers for each patient group.

- Users can:
 - Reorder report columns.
 - Configure custom display names for columns through **Workflow Setup** or **Filter Criteria**.
- The report displays:
 - **Total Copay** for each patient at the end of that patient's prescription list.
 - **Grand Total Copay** for all patients on the final page of the report.

3. Implementation Team Steps: For Create the Customer History Report

a. Create a Report Bucket

- Navigate to the Workflow Setup → Create/Edit Workflow → Add Bucket.
- Select Customer History Report as the Data Component.

b. Configure Filter Criteria

- Store
- Service From Date (Fill Date)
- Service To Date (Fill Date)
 - For example, First day of the month → Last day of the month

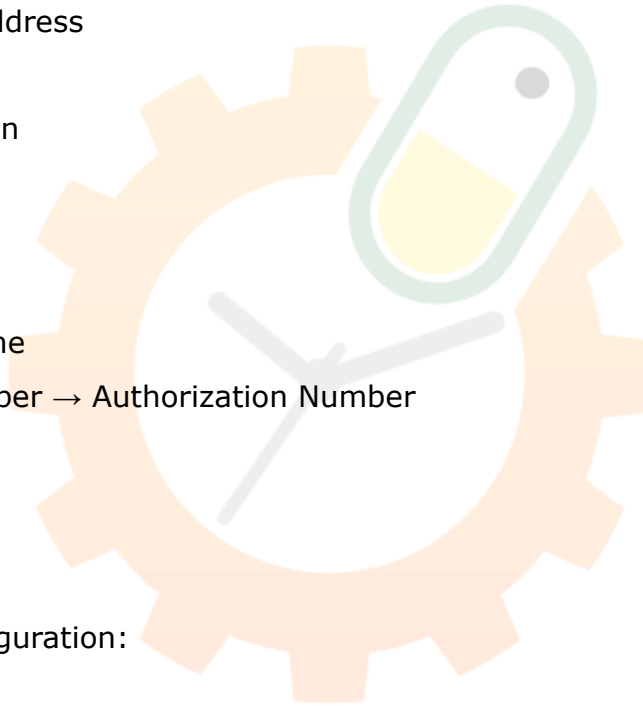

c. Configure Report Columns in Mentioned Order

Add the required columns and configure the following display names as required.

(Format Column Name → Column Display Name)

- Store
- Rx Filled Number → Rx#
- Service Date → Fill Date

- Patient Information → Report For
- Patient Chart Number → Customer ID
- Patient SSN Number → SSN
- Patient Gender → Gender
- Patient Primary Address → Address
- Filled NDC → NDC
- Filled Drug → Drug Description
- Quantity → Qty
- Days Supply
- Copay
- Prescriber → Prescriber's Name
- Insurance Authorization Number → Authorization Number
- Facility Name
- Facility Code

d. Configure Grouping

Add the following grouping configuration:

- **Group By: Patient Info**
- **Aggregate Function: Sum**
- **Aggregate Column: Copay**

e. Configure Sorting: Sorting can be configured based on the client's reporting preference.

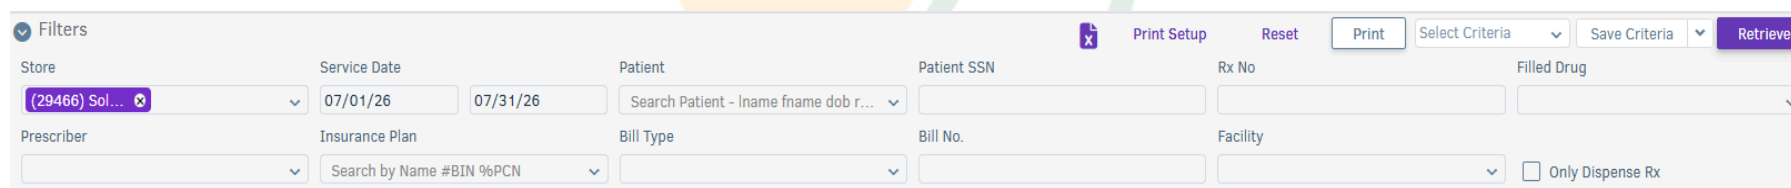

f. Configure Report Header

Include the following applied filter values in the report header

- Service From Date
- Service To Date

4. Available Search Filters

Users can generate the report using any combination of the following filters:

The screenshot shows a search filter interface with the following fields and controls:

- Filters** (dropdown menu)
- Store**: (29466) Sol...
- Service Date**: 07/01/26 to 07/31/26
- Patient**: Search Patient - lname fname dob r...
- Patient SSN**:
- Rx No**:
- Filled Drug**:
- Prescriber**:
- Insurance Plan**: Search by Name #BIN %PCN
- Bill Type**:
- Bill No.**:
- Facility**:
- Only Dispense Rx**: ☐
- Buttons**: Print Setup, Reset, Print, Select Criteria, Save Criteria, Retrieve

Users can define the reporting period by selecting the appropriate **Service Date (Fill Date)** range, such as:

- Weekly
- Monthly
- Yearly
- Custom Date Range

5. Configurable Report Grid

The Customer History Report supports configurable layouts, allowing pharmacies to customize the information displayed according to their operational requirements.

The report supports independent column configuration for:

- **List View** – Displays data within the workflow grid.
- **Print View** – Defines the columns included in the printed report.

- **Export View** – Defines the columns included in exported files.

6. Display Name Configuration

Users can assign custom display names to report columns within the **Filter Criteria** configuration.

- If a custom display name is provided, it is displayed in the **List**, **Print**, and **Export** views.
- If no display name is specified, the system displays the default column name.

7. Copy Column Configuration

To simplify report configuration, users can copy the **List** column layout directly to the **Print** or **Export** layouts by clicking the **Arrow** icon available next to the **List** column configuration.

NOTE: For the Reference of Customer History Report, refer the sample report [Customer History Report](#)

4. Report: Customer History with Plan Paid and More

A new Customer History Report data component has been introduced to support the Claim History with Plan Paid and More Report. This enhancement allows pharmacies to generate configurable **Customer History with Plan Paid and More** reports that provide a printable summary of the Insurance Amount, Insurance Plan Paid and Copay amount for each prescription.

Key Enhancements:

1. Workflow Setup

- A new data component named **Customer History Report** has been added to **Workflow Setup**.
- To create a report bucket, select **Customer History Report** as the data component while configuring the workflow.

2. Functional Flow

- When a bill is generated with the **Insurance** bill type, a new entry is added to the report.
- The **Copay Amount** is populated from the **Insurance Payment Receipt**.
- If the insurance pays the entire claimed amount, the **Copay Amount** is displayed as **\$0.00**.
- The Allowed Amount is calculated as the sum of the Insurance Paid Amount and the Copay Amount.
- The amount paid by the insurance carrier is displayed in the **Insurance Paid** column.
- Once an insurance bill is successfully transmitted, the corresponding prescription is automatically included in the report along with the **Allowed Amount**, **Insurance Paid Amount**, and **Copay Amount** retrieved from the Insurance Payment Receipt.
- If the primary insurance has paid some amount of the total claimed amount and later on some amount transferred to secondary insurance then in the report, a new entry will be updated for secondary insurance in the report.

- If the secondary insurance amount is not transmitted then in the report Insurance Allowed amount, Insurance Paid and Copay amount will be shown \$0.00
- If any insurance get reversed then in the report, all the amount for that insurance will be shown \$0.00
- If the user has deleted any insurance then receipt entry for that prescription with associated bill will get deleted.
- If the insurance is updated to **Bill Later**, the corresponding prescription associated with that bill is excluded from the report.
- The report displays:
 - **Total Insurance Allowed Amount** for each Insurance at the end of that patient's prescription list.
 - **Total Insurance Paid** for each Insurance at the end of that patient's prescription list.
 - **Total Copay** for each Insurance at the end of that patient's prescription list.
 - **Grand Total Copay** for all patients on the final page of the report.

3. Implementation Team Steps: For Create the Customer History Report

a. Create a Report Bucket

- Navigate to the Workflow Setup → Create/Edit Workflow → Add Bucket.
- Select Customer History Report as the Data Component.

b. Configure Filter Criteria

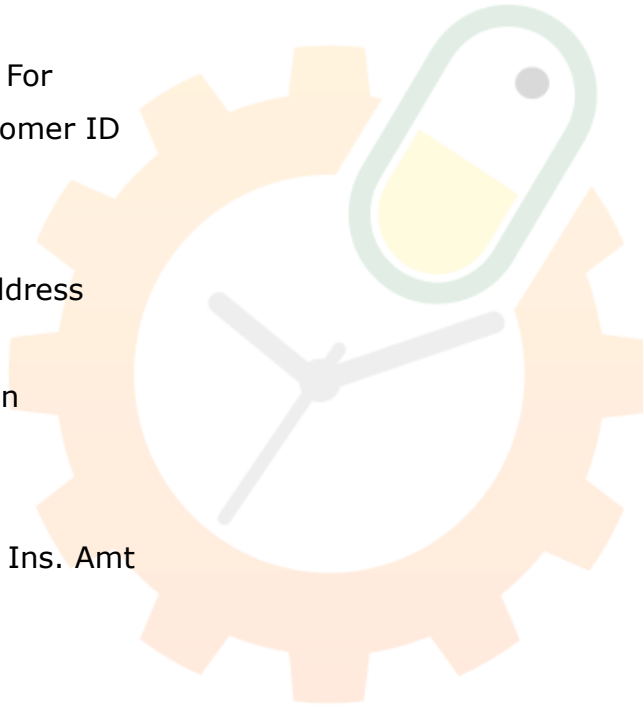

- Store
- Service From Date (Fill Date)
- Service To Date (Fill Date)
 - For example, First day of the month → Last day of the month

c. Configure Report Columns in Mentioned Order

Add the required columns and configure the following display names as required.

(Format Column Name → Column Display Name)

- Store
- Rx Filled Number → Rx & Rf #'s
- Service Date → Fill Date
- Patient Information → Report For
- Patient Chart Number → Customer ID
- Patient SSN Number → SSN
- Patient Gender → Gender
- Patient Primary Address → Address
- Filled NDC → NDC
- Filled Drug → Drug Description
- Quantity → Qty
- Days Supply
- Insurance Allowed Amount → Ins. Amt
- Insurance Paid → Ins. Paid
- Copay
- Prescriber → Prescriber's Name
- Facility Name
- Facility Code → Facility ID#

d. Configure Grouping

Add the following grouping configuration:

- Group By: Patient Info
- Insurance
 - Aggregate Sum → Insurance Paid
 - Aggregate Sum → Insurance Allowed Amount
 - Aggregate Sum → Copay

e. Configure Sorting: Sorting can be configured based on the client's reporting preference.

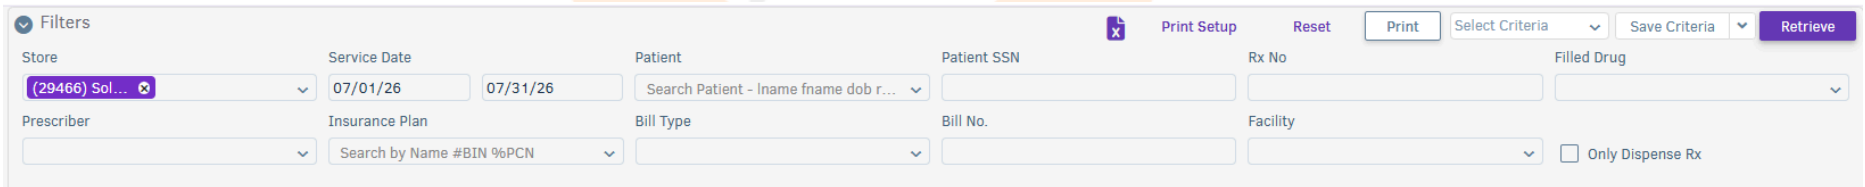

f. Configure Report Header

Include the following applied filter values in the report header

- Service From Date
- Service To Date

4. Available Search Filters

Users can generate the report using any combination of the following filters:

The screenshot shows the 'Filters' section of the DosePacker application. It includes a header with 'Print Setup', 'Reset', 'Print', 'Select Criteria', 'Save Criteria', and 'Retrieve' buttons. The filter fields are organized into two rows:

Store	Service Date	Patient	Patient SSN	Rx No	Filled Drug
(29466) Sol...	07/01/26	07/31/26	Search Patient - lname fname dob r...		
Prescriber	Insurance Plan	Bill Type	Bill No.	Facility	
	Search by Name #BIN %PCN				☐ Only Dispense Rx

Users can define the reporting period by selecting the appropriate **Service Date (Fill Date)** range, such as:

- Weekly
- Monthly
- Yearly

- Custom Date Range

5. Configurable Report Grid

The Customer History Report supports configurable layouts, allowing pharmacies to customize the information displayed according to their operational requirements.

The report supports independent column configuration for:

- **List View** – Displays data within the workflow grid.
- **Print View** – Defines the columns included in the printed report.
- **Export View** – Defines the columns included in exported files.

6. Display Name Configuration

Users can assign custom display names to report columns within the **Filter Criteria** configuration.

- If a custom display name is provided, it is displayed in the **List**, **Print**, and **Export** views.
- If no display name is specified, the system displays the default column name.

7. Copy Column Configuration

To simplify report configuration, users can copy the **List** column layout directly to the **Print** or **Export** layouts by clicking the **Arrow** icon available next to the **List** column configuration.

NOTE: For the Reference of **Customer History with Plan Paid and More**, refer the sample report [Customer History with Plan Paid and More](#)

5. Quick View Patient Visibility Enhancement

To improve patient visibility and streamline workflow efficiency, we have enhanced the **Quick View** to display patients who do not have any prescriptions.

Key Enhancements:

Patients Without Prescriptions in Quick View

- Previously, patients without any prescriptions (No Rx) were not displayed in **Quick View**.
- With this enhancement, patients who do not have any prescriptions will now be displayed:
 - In the **Quick View** bucket.

The screenshot displays the FRxCARE Quick View interface. On the left, a sidebar shows various workflow categories with counts. The 'Quickview' category is highlighted with a red box, showing a count of 3227. The main area displays patient information for Emma Watson (PT37397), including her date of birth (07/04/2007), gender (Female), and insurance status (No Insurance Recorded). Below this, a table titled 'Prescriptions' is shown, which is currently empty. The interface also includes sections for Patient Notes, Rx Notes, and Fill History, all of which are currently empty. The bottom of the screen displays contact information for the pharmacy, including NPI, NABP, and phone/fax numbers.

- On the **Retail Workflow** screen when the **View Type** is selected as **Quick View**.

The screenshot displays the FRxCARE Retail Workflow interface. The 'Workflow' tab is active, and the 'Retail Workflow' sub-tab is selected. The 'View' dropdown menu under 'Drug Schedule' is open, showing 'Quick View' as the selected option. The patient information section shows 'Watson, Ema (PT37397)' with various demographic and clinical details. The 'Prescriptions' section is empty, indicating no records found. The 'Patient Notes' and 'Rx Notes' sections also show no records found. The 'Fill History' section is also empty.

- **Note:** Patients without prescription will not be displayed in any other view type.

Benefits:

- Improves visibility of patients who have not yet been associated with a prescription.
- Enables users to quickly identify and access patient records directly from Quick View

6. Account Payment - Charged Outside FRxCARE checked by default.

The **Account Payment** screen has been enhanced to default select the “Charged Outside FRxCARE” checkbox for all newly created receipts.

Key Enhancements:

- The “Charged Outside FRxCARE” checkbox is now checked by default during new receipt creation in the **Account Payment** Screen.
- This change has been implemented based on client confirmation that **all patient payments are processed outside of FRxCARE** via the Paymentus Portal.
- Users no longer need to manually select this option while creating receipts.
- Users can manually uncheck the checkbox if required before saving the receipt.

7. Label Design Changes

Key Enhancements:

- We have created a label based on the label shared by the FRx team.
- The design is the same as the label which is shared, and we have made enhancement and created a new label design.

- For this we have created a new label named 'FRx Pack Label Template'. A user can use the template to preview, and print the pack label.

Benefits:

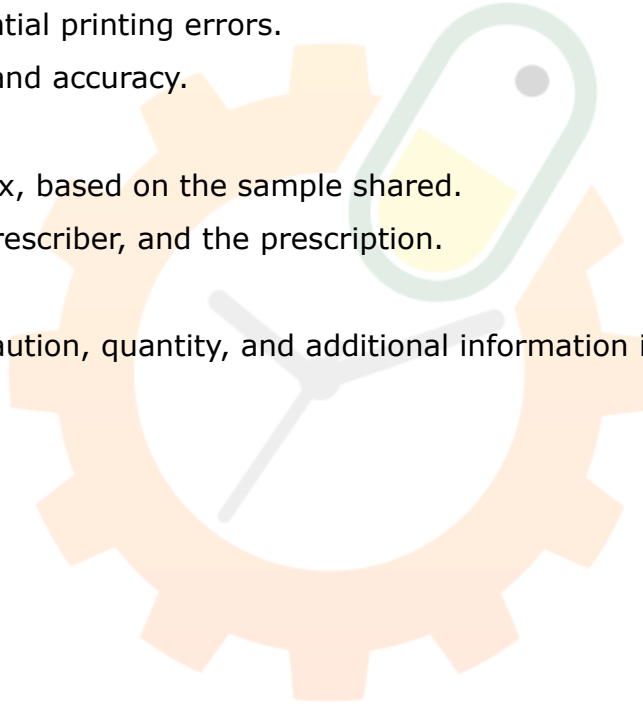

- Standardizes the FRx pack label design.
- Provides a consistent and professional labeling experience.
- Enables users to easily preview and print pack labels.
- Reduces manual effort and potential printing errors.
- Improves operational efficiency and accuracy.

In Scope:

- Pack label changes for the FRx, based on the sample shared.
- Details related to the drug, prescriber, and the prescription.

Upcoming Release:

- Few changes related to the caution, quantity, and additional information in the pack label.
- Remote fill indication

8. Future Hold Start date changes

Key Enhancements:

- We have made an enhancement to restrict the user to add the future date in the hold start date.
- Earlier we were allowing a user to add a future date in the hold start date, now we have added a validation for the future date.

Hold ☒ Hold ☐ Error

Hold Date * 07/29/26 To By: Kahnwald, Jonas

- This will be impacting all the places from where a user can mark the prescription as hold.
- Also, no changes are made in the hold end date, and it will continue to allow the future date and a user can add the future hold end date in it.

9. Queue Splitting Enhancement Based on Additional Criteria

Key Enhancements:

Queue Splitting Based on Delivery To

A new enhancement has been implemented to automatically split queues based on the **Delivery To** field on the prescription (Rx).

Automatic Queue Creation and Splitting

Previously, the system automatically created or split queues based on the following criteria:

- Delivery Priority
- Delivery Mode
- Filling Partner

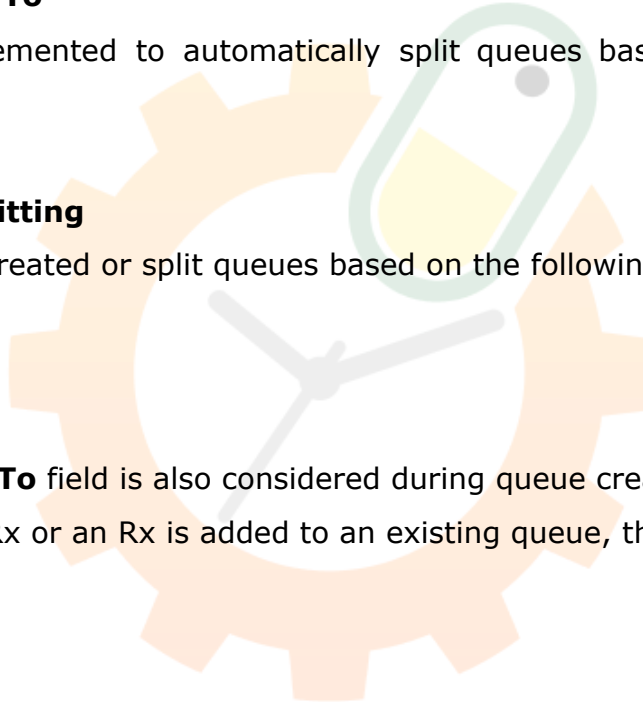

With this enhancement, the **Delivery To** field is also considered during queue creation and queue splitting.

When a new queue is created for an Rx or an Rx is added to an existing queue, the system now evaluates the following criteria:

- Delivery Priority
- Delivery Mode
- Filling Partner
- **Delivery To**

This ensures prescriptions with different **Delivery To** values are automatically grouped into separate queues.

Queue Merge, Move to Queue, and Add to Queue

For manual queue operations, including:

- Queue Merge
- Move to Queue
- Add to Queue

If multiple queues have the **same Filling Partner** but different **Delivery To** values, users will still be able to:

- Merge the queues
- Move prescriptions between queues
- Add prescriptions to existing queues

The **Delivery To** value is not considered during these manual operations.

Queue Creation During Refill Processing:

When a prescription does not already belong to a queue (regardless of whether it has been delivered or not), the system will create a new queue after refill processing based on the following criteria:

- Delivery Priority
- Delivery Mode
- Filling Partner
- Delivery To

This enhancement applies to refill processing initiated from:

- **Retail Workflow >> Quick Actions → Refill**
- **Refill Due window**
- **Inbox >> Refill Request by Facility category**
- **Inbox >> Refill Request by Clinic category**

This ensures consistent queue creation behavior across all refill workflows.

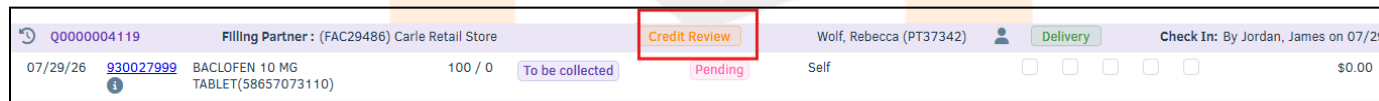

10. Queue Status Enhancement

The Queue Status determination logic has been enhanced to improve visibility of prescription processing stages within a queue. A new **Credit Review** queue status has been introduced, and the queue status evaluation logic has been updated to determine the overall queue status based on the highest-priority transaction status among all prescriptions in the queue.

Key Enhancements:

- **New Queue Status – Credit Review**

- Introduced a new **Credit Review** queue status.
- If a queue contains one or more prescriptions with a transaction status of **Credit Review**, the queue status can now display **Credit Review**, based on the queue status priority.

The screenshot shows a queue status interface with the following details:

- Queue ID: Q0000004119
- Filling Partner: (FAC29486) Carle Retail Store
- Queue Status: **Credit Review** (highlighted in a red box)
- Pharmacist: Wolf, Rebecca (PT37342)
- Delivery Status: Delivery
- Check In: By Jordan, James on 07/29/
- Prescription Details: 07/29/26, 930027999, BACLOFEN 10 MG TABLET(58657073110)
- Quantity: 100 / 0
- Transaction Status: To be collected
- Queue Status: Pending
- Self: Self
- Cost: \$0.00

- **Updated Queue Status Priority Logic**

- The system now determines the queue status using a predefined priority hierarchy of transaction statuses.
- When multiple prescriptions within the same queue have different transaction statuses, the queue status is derived from the **highest-priority** transaction status.
- The priority order has been updated as follows (highest to lowest):
 - Not Billed
 - Billing Pending
 - Billing Error
 - Credit Review

- Not filled.
- Not Checked
- Checked
- Pre Delivery
- Delivery Ready
- Delivery In Progress
- Delivered
- **Examples:**
 - **Example 1:**
 - Rx1 – **Billing Pending**
 - Rx2 – **Credit Review**
 - **Queue Status: Billing Pending**
 - **Example 2:**
 - Rx1 – **Credit Review**
 - Rx2 – **Not Filled**
 - Rx3 – **Checked**
 - **Queue Status: Credit Review**

Scope:

In Scope

- Addition of the **Credit Review** queue status.
- Updated queue status calculation based on transaction status priority.
- Queue status display enhancements across the application.

Out of Scope

- Changes to individual prescription transaction status logic.
- Modifications to the Credit Review workflow or approval process.

11. Patient Relationship Code Enhancement for Family Plan Insurance

To improve claim accuracy and simplify relationship selection, we have enhanced the display of **Patient Relationship Codes** across the **Family Plan Insurance** and **Patient Contacts** workflows. Additionally, the selected relationship will now be mapped to the appropriate **Patient Relationship Code** and transmitted in the claim file to ensure accurate claim processing and compliance with payer requirements.

Key Enhancements:

1. Insurance - Relation to Insured Dropdown:

- In the **Family Plan Insurance** section, the **Relation to Insured** dropdown will now display the corresponding **Patient Relationship Code** alongside each relationship.
- **Example:**
 - Self (1)
 - Spouse (2)
 - Child (3)

Easily identify and select the appropriate re

Type Dropdown:

- Easily identify and select the appropriate re
- Type Dropdown:**

Type Dropdown

- ### Type Dropdown

- Child (3)

Contact *Note: Details in contact must be saved to make changes in guarantor*

Active	Contact *	Contact Type *	Emergency Contact	Phone
☒	tt, tt	(3) Adopted Child	☐	

Guarantor *Note: Details in guarantor must be saved to make*

From Date	To Date	Guarantor	Relationship Category	Active	Care of(C/o)
		Abbott, Hall		☒	

Relationship Code Legend:

- (3) Adopted Child
- (4) Cadaver Donor
- (4) Case Manager
- (3) Child
- (3) Child Where Insured Has No Financial Responsibility
- (4) Dependent of a Minor Dependent
- (4) Disabled Child
- (3) Emancipated Minor
- (4) Employee
- (4) Father
- (3) Foster Child

- This provides a consistent user experience by displaying the relationship code wherever patient relationship information is selected.

3. Patient Contacts –Relation to Dependent Dropdown:

- In the **Patient Contacts** module, under the **Dependent** section, the **Relation to Dependent** dropdown will now display the corresponding **Patient Relationship Code** alongside each relationship.
- **Example:**
 - Self (1)
 - Spouse (2)

- Child (3)

Dependent					
From Date	To Date	Dependent *	Relation With Dependent *	Active	Note
07/07/26	07/31/26	Abbott, Mariana (PT34251)	(3) Adopted Child	☒	

- Displaying the relationship code in this dropdown helps users accurately identify and select the appropriate relationship for dependent records while maintaining consistency throughout the application.

4. Patient Relationship Code Mapping:

- The application will automatically assign the appropriate **Patient Relationship Code** based on the selected patient relationship.
- The mapping is as follows:

Patient Relationship	Patient Relationship Code
Self	1
Spouse	2
Child	3
Stepson	3

Foster Child	3
Adopted Child	3
Child Where Insured Has No Financial Responsibility	3
Emancipated Minor	3
All other relationship types	4

- **Mapping Rules:**

- If the selected relationship is **Self**, the **Patient Relationship Code** will be **1**.
- If the selected relationship is **Spouse**, the **Patient Relationship Code** will be **2**.
- If the selected relationship is **Child, Stepson, Foster Child, Adopted Child, Child Where Insured Has No Financial Responsibility**, or **Emancipated Minor**, the **Patient Relationship Code** will be **3**.
- Any other relationship not listed above will default to **Patient Relationship Code = 4**.

Benefits:

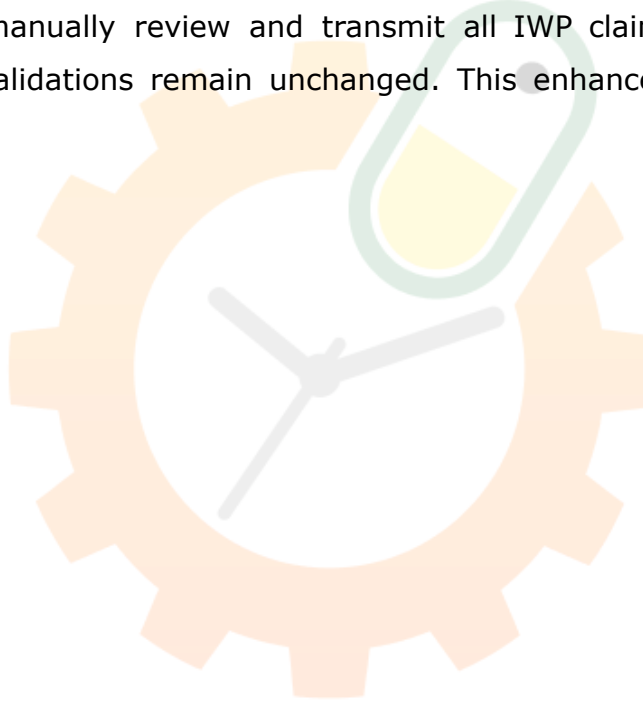

- Displays **Patient Relationship Codes** alongside relationship values in the **Relation to Insured, Contact Type**, and **Relation to Dependent** dropdowns.
- Provides a consistent user experience across **Family Plan Insurance** and **Patient Contacts**.
- Automatically maps patient relationships to standardized claim codes.
- Ensures the correct **Patient Relationship Code** is included in the claim file.

- Reduces the risk of claim rejections due to incorrect or missing patient relationship information.
- Improves overall claim accuracy and compliance with payer requirements.

12. Manual Claim Transmission for IWP Insurance Plans.

Implemented a new **mandatory manual claim review process** for **Insurance Plan Type (IWP)** across all workflows. Automatic claim transmission has been disabled for **Cash, Electronic, and Paper** claim formats regardless of the **Auto Transmit Bills** store configuration. Bills will continue to be created as per the existing workflow; however, users must manually review and transmit all IWP claims. Existing billing, reversal, receipt generation, and other workflow validations remain unchanged. This enhancement was implemented based on a **client-requested requirement**

13. Rename Incoming Call screen to Call Information and Inbox Communication Changes

This enhancement improves the Call Information screen by streamlining communication tracking and Inbox processing while preserving the existing Rx and refill workflows

Key Enhancements:

- Renamed the Incoming Call screen to **Call Information**.

- Added support to record and maintain call details for communication tracking.
- Call Information entries are now automatically marked as "**Done**" by default in the Inbox.

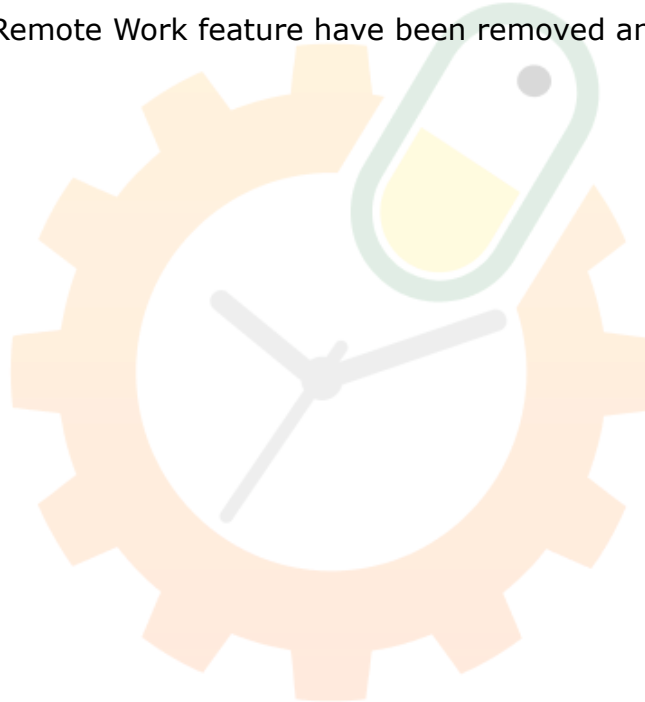

☐		Date Time	Auto	From	Patient	Status	Category
☐		12:30 PM		Acosta, Martin (Acosta, Martin)	test, sam	Done	Other
☐		11:58 AM		Targeryan, Deamon	Process, Refill	Done	Other

- Updated Inbox communication entries to use the **Other category** instead of New Rx.
- Double-clicking / clicking on process a Call Information entry in the Inbox now opens the **Call Information screen** with the left panel displayed in read-only mode, instead of opening the New Rx screen.
- User can take actions from the Right side option from the same call information modal

14. Revert Remote work requirements.

The Remote Work enhancement introduced for the FRx Care MVP has been reverted.

- The Remote Work option will no longer be available at the Profile level.
- The Remote Work option will no longer be available at the User level.
- All validations related to the Remote Work feature have been removed and will no longer be applied.

15. Support of M3P Letter - Spanish Language.

The M3P Letter can be printed from the **Rx Claim** screen for eligible **Medicare Part D** claims that have a latest claim response status of **Paid** or **Captured** with **Approval Code 056**. Previously, the system supported printing the M3P Letter only in English.

Key Enhancements:

The **Print M3P Letter** functionality has been enhanced to support **Spanish** in addition to the existing **English** language. Users can now navigate to **Rx Claim** → **More Options** → **Print M3P Letter** and select either **M3P Letter – English** or **M3P Letter – Spanish** before printing.

Benefits:

- Enables pharmacies to provide the M3P Letter in Spanish, improving communication with Spanish-speaking patients.
- Gives users the flexibility to choose the appropriate letter language at the time of printing.
- Improves accessibility and helps ensure patient communications are available in multiple languages.

Page 52

16. Inventory Flow Enhancements:

This release introduces enhancements to inventory visibility, transaction tracking, purchase order management, and dispensing workflows. These improvements streamline day-to-day operations, strengthen inventory controls, and provide greater transparency across the inventory lifecycle.

Inventory Detail Enhancements:

- Transaction Audit Information:** To improve transaction traceability and support audit requirements, the **Inventory Detail** screen has been enhanced to display the **Note** and **Logged In User** information against every inventory transaction. Users can now easily identify who performed a transaction and view any associated remarks directly from the transaction history, eliminating the need for additional investigation.

- Transaction-wise Segregation: The Inventory Detail screen has been reorganized to provide better visibility into inventory movements. Instead of displaying all transactions in a single list, users can now navigate through dedicated tabs for:
 - **Purchase**
 - **Dispense**
 - **Adjustment**
 - **All Transactions**

Inventory Detail

Purchase Order Enhancements:

- Received Quantity in Purchase Order Details** : A new **Received Quantity** column has been added to the **Purchase Order Details** screen. This column displays the quantity that has been received against each purchase order line, allowing users to easily compare the ordered quantity with the received quantity and monitor pending receipts more effectively.

PO Detail

PO Number: APO00028

Status: Partial Received

Vendor: Amerisource Bergen

Store: VIBRANT CARE PHARMACY INC

Order Date: 07/24/2026

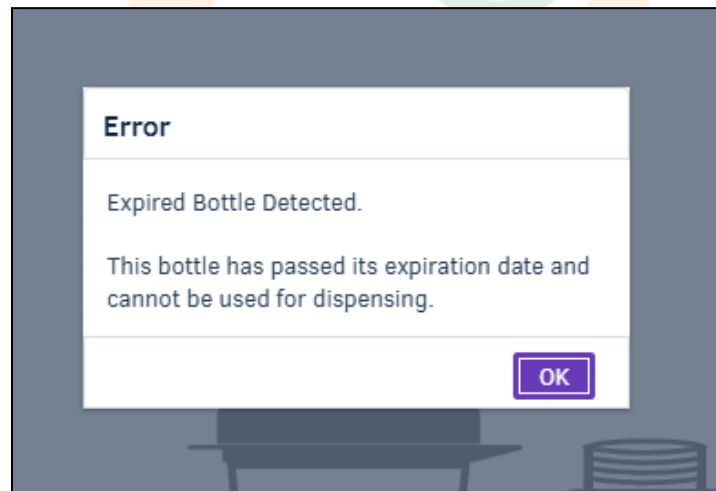

NDC	Drug	Ordered Pack	Ordered Quantity	Received Quantity	Price/Pack	Purchase Cost

00069130510	RETACRIT 2,000 UNIT/ML VIAL	4	20	20	\$23.00	\$92.00

Dispensing Enhancements:

- **Expired Lot Validation During Filling** : A new validation has been introduced during the dispensing workflow to prevent medications from being filled using expired inventory.

When a user scans a bottle during the filling process, the system will verify the lot's expiry date. If the scanned lot has expired, an error message will be displayed, and the user will not be allowed to proceed with filling using that bottle. The user must scan or select a valid, non-expired lot before the dispensing process can continue.

This enhancement strengthens patient safety and ensures compliance with inventory handling standards.

**Drug Adjustment Enhancements:**

- **Deduction Lot Quantity** : To provide greater transparency during dispensing, a new Deduction Lot Qty column has been added adjacent to the Available Lot Qty column in the lot selection grid.

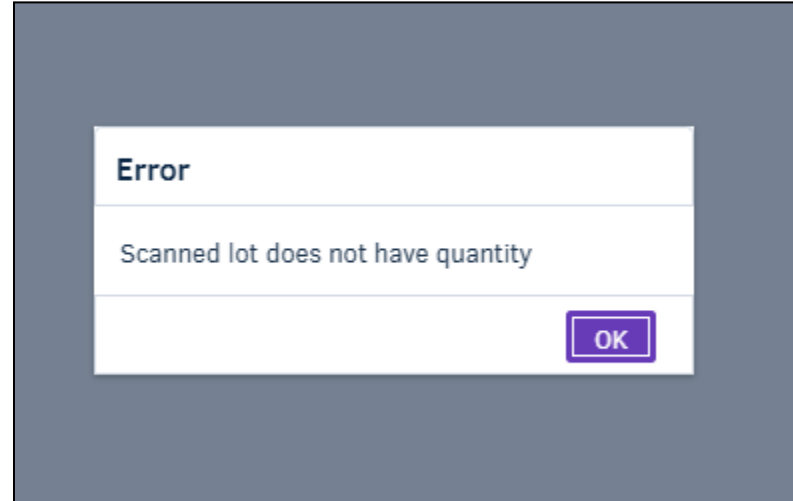

The Deduction Lot Qty column displays the quantity that will be deducted from each selected lot as part of the current adjustment transaction. This allows users to clearly understand how the requested quantity will be allocated across one or more lots before the inventory is updated, making the deduction process easier to review and validate.

Adjustment Date	Drug *	Drug On Hand Qty	Adjustment Type *	Lot Number *	Expiration Date	Available Lot Qty	Deduction Lot Qty *	Note *
07/29/26	ONE-PIECE DRAINABLE POUCH (083950...	15125	Drug Damaged	LOT-65665545111	09/24/26	105	50	Drug Damaged

- A validation has been introduced for the **Deduction Lot Qty** field to ensure accurate inventory deductions. The entered deduction quantity must be **greater than 0** and **less than or equal to the Available Lot Qty**. If either condition is not met, the system will display an error message and prevent the user from proceeding until a valid quantity is entered.

Adjustment Date	Drug *	Drug On Hand Qty	Adjustment Type *	Lot Number *	Expiration Date	Available Lot Qty	Deduction Lot Qty *	Note *
		105				105	106	Drug Damaged

- Zero Lot Quantity Validation for Drug Adjustments:** A new validation has been introduced to prevent adjustments on inventory lots with no available stock. If a user scans a bottle whose Lot Qty is 0, the system will display an error message indicating that the Lot Quantity cannot be zero and will not allow the user to proceed with the drug adjustment. This validation helps prevent invalid inventory adjustments and maintains inventory accuracy.

17. Security Rights for the request screens

We have implemented independent security rights for **Rx Bulk Entry**, **Incoming Rx Entry (Verbal Orders)**, and sensitive billing actions such as **Bill Reversal** and **Transmit**. UI elements are dynamically displayed or restricted based on the user's assigned permissions, ensuring secure and role-based access.

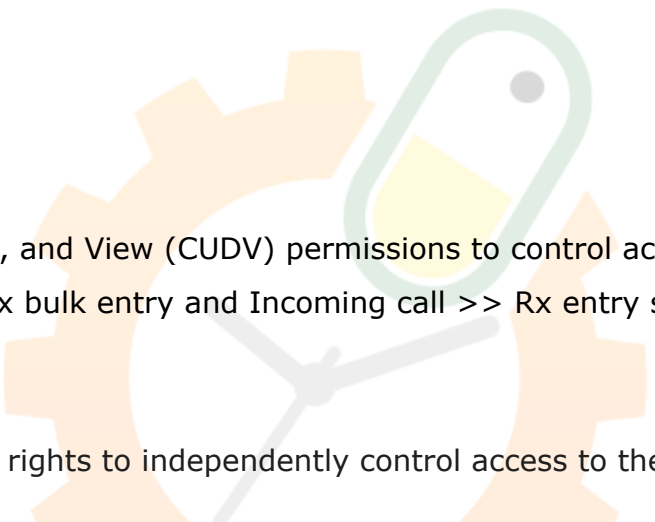

Key Enhancements:

Security Rights Screen

- Added Create, Update, Delete, and View (CUDV) permissions to control access to the Security Rights configuration screen for the Rx bulk entry and Incoming call >> Rx entry screen.

Rx Bulk Entry Screen:

Introduced dedicated security rights to independently control access to the **Rx Bulk Entry** screen.

	☐ Reverse	☒ Transmit	☒ Request Auth	☒ View Claim History
▼ Billing Configuration	☒ View	☒ Create	☒ Update	☒ Delete
☒ Select All	Drug Bill To Setup ☒ View	☒ Create	☒ Update	☒ Delete

MISC Screen:

- Added **Create, Update, Delete, and View (CUDV)** permissions for the MISC screen.
- If **Create** permission is not assigned, the "+" icon is hidden from the MISC screen and all MISC dropdowns.
- If **View** permission is not assigned, users cannot open the MISC screen, while existing MISC dropdown values remain available for selection.
- If **Update/Delete** permissions are not assigned, edit and delete actions are disabled on the MISC screen.
