

Product	FRxCARE
Release Type	Enhancements
Release Version	Release 1
Release Date	08/05/2026

Table of Points

1. Insurance: "Waiting on Appeals" Bucket Insurance Process.....	4
2. FAP Manual Review Workflow for Medicare Part D Claims.....	12
3. FAP Copay Rules screen and Triggers.....	14
4. Patient Changes: Duplicate Check based on EMPI.....	19
5. Patient Changes: Manual Copay Review Trap.....	21
6. Consent Guidelines: Arkansas Patient Relationship Verification Enhancement.....	24
7. Filter status exclusion and new status Inclusion in the retail workflow.....	26
8. Fill Validation Based on Queue Status.....	31
9. Removal of Pickup and Waiting Queue Tabs.....	33
10. Central Fill Status Enhancements.....	34
11. Queue State and Modification Logic.....	39
12. Letters: FL Medicaid Notification Letter.....	43
13. Reports: Customer Rx Listing.....	48
14. Open Credit Component Label Changes and Summary Section (Lisa's Point: Item 25).....	53
15. Eligibility Automation – Patient Insurance Creation & Update.....	55
16. Prescription - Hold Note Enhancement.....	64
17. Lot & vial Expiration date management in filling and labelling.....	65

18. Inbox- Document category as per document type.....	70
19. Inbox- hold option.....	77
20. Inbox: Reply to Emails Option.....	79
21. Inbox: Document attachment to patient received through Email.....	82
22. Fax Transfer Between Store Locations.....	84
23. Account Filter – Display Associated Patients for Guarantor Accounts (Lisa's Point: Item 23).....	87
24. UPS Delivery Workflow.....	89
25. Rx Transfer without PV1 Completion.....	93
26. Rx typing - NDC Display for Prescribed and Fill Drugs.....	95
27. Exclude Rejection Codes Filter Enhancement.....	96
28. DUR Review and Refill Request Processing.....	97
29. Activity Category Setup Enhancement.....	99
30. MS Entra Integration.....	100
31. Queue: DC action on Prescription.....	102
32. Typing: Typist Validations.....	103
33. Vial Label Changes : Discard date , Remote Fill Address , Caution.....	106
34. Patient Refund Check Letter – Print and Refund screen Enhancements.....	108
35. Clinical Bifurcation Drug Mapping Update.....	111
36. Clinical Severity in the Contraindication Check.....	112
37. Same CFI Drug Already Filled on New Prescription to be Shown in Filled Drug Tab.....	114
38. Filtering Through Specific Email Using "From" Value Filter in Inbox.....	117
39. Central Filling Enhancements for Accepted / Rejected Flow.....	119
40. Template: Insurance Not Contracted.....	122
41. Template: Invalid Patient DOB.....	125
42. Template: Terminated Insurance Coverage.....	128
43. Template: Patient HealthWell Program Update.....	131
44. Template: Extra Help Application Status.....	134
45. Template: Unable to Bill Medication (Binder Medications Only).....	137

46. Template: E-Mail/Email/Patient Status Update.....	140
47. Template: Disposal Form/Dispose/Destroy.....	142
48. Template: ECS Enrollment Instructions.....	144
49. Template: No prescription on file.....	146
50. Template: No prescription on file (B2B).....	148
51. Template: Email request for prescription to be held that is not yet received.....	150
52. Template: Refill Denial due to A/R Balance.....	152
53. Feature: OCC Override for COB Segment Generation.....	154
54. Inventory Flow Enhancements:.....	157
55. Inventory : Central fill price consideration Flow.....	164

Enhancement Overview

1. Insurance: "Waiting on Appeals" Bucket Insurance Process

Introduced the **Waiting on Appeals** insurance process to automate the management of **Fresenius Kidney Care (FKC)** claims for **Cinacalcet (Sensipar)** prescriptions. The enhancement automates claim status management, clinic email notifications, patient tagging, prescription hold/unhold processing, and daily claim retransmissions, reducing manual intervention while improving workflow efficiency and claim follow-up.

Key Enhancements:

1. FKC Insurance & Claim Processing

- For the **Internal Plan type 'FKC Plan'** introduced the feature of waiting on appeals.
- Introduced the **"Waiting on Appeals"** custom status, which is automatically assigned when an FKC claim is rejected with **Rejection Code 70** and the additional message **"FKC Responsible Not Clinically Approved"**, and automatically removed when the rejection criteria no longer apply or the claim is paid.

The screenshot displays the 'Insurance Summary' and 'Claim' sections of the DosePacker interface. In the 'Custom Status' dropdown, 'Waiting on Appeals' is selected. In the 'Status' dropdown, 'Rejected' is selected. The 'Claim' section shows two rejection codes: (70) - Product/Service Not Covered and (75) - Prior Authorization Required. The 'Additional Message' section lists 'Approved Message Code: 70, 75' and 'Reference No: 0012345123451'. The 'Payment Summary' section shows 'Insurance Paid: \$0.00', 'Patient Paid: \$0.00', and 'Total Payment: \$0.00'.

2. Automated Clinic Communication

- Implemented automated **Cinacalcet clinic email notifications** that are triggered to the clinic's email upon the first qualifying rejection, with built-in retry logic for failed email deliveries and controlled re-triggering when claim status changes.

Email Re-trigger logic: The email may be triggered again only if the bill subsequently receives

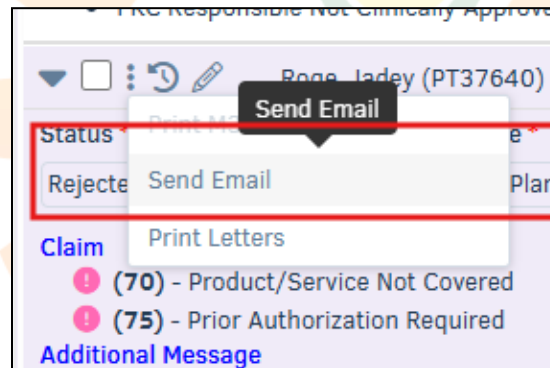

- A different rejection code,
- Different additional message, or

- A status other than Rejected, and later again receives the above rejection condition.

I.e when the claim is first rejected with rejection code as 70 and additional message received as 'FKC Responsible Not Clinically Approved' at that time the custom status in the bill will be set to 'Waiting on Appeals'.

On Retrial if paid status is received the email will not be triggered but on again sending if received the same code 70 and additional message the email will be triggered again.

- Added a **Send Email** option in the **Rx Claim** screen, allowing users to manually send the predefined Cinacalcet email template while editing the email recipients, subject, and content before sending.

- Introduced a new system-defined **Cinacalcet** email/letter template with automatic population of patient, store, clinic, and employee details for standardized communication.
- Users can check the sent email in the communication window.

Patient: Jadey Roge

Patient DOB: 01/01/2001

Medication: Cinacalcet (Sensipar)

We have received a prescription for the above mutual patient. Due to FK Corporate P&T clinical criteria for Cinacalcet (Sensipar), this patient must be reviewed with the prescriber for next steps. Please navigate to the Formulary Exception Request application link in eCC to either:

1. Confirm with prescriber if considering Cinacalcet (Sensipar) TIW in-center administration is an option for this patient.

2. Complete the attestation to confirm the choice of the home prescription by requesting Cinacalcet (Sensipar) Rx.

We will need to place the prescription on hold if you are unable to respond within fourteen (14) days. If the order is needed after (14) days, please call us at 854-213-6977 and we will place the order.

The Cinacalcet Titration Criteria can be found at [FME](#)

Attach Patient Documents

Send

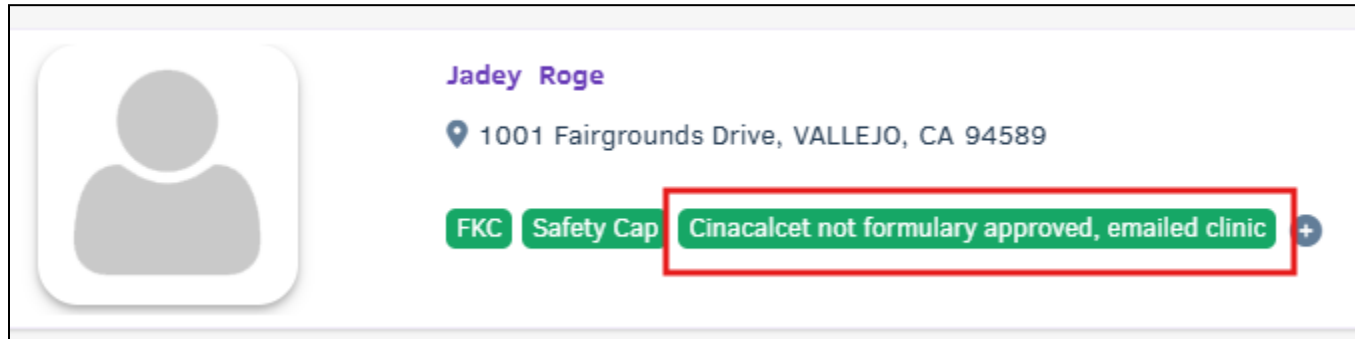

3. Patient Tags & Prescription Hold Automation

- Added system-defined **Patient Tags** to automatically identify prescriptions where the clinic has been notified and where the prescription has been placed on hold after the review period.

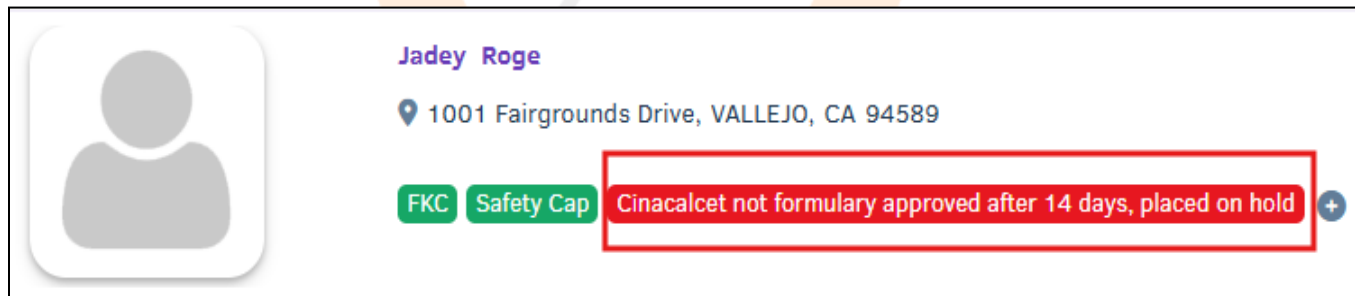

© 2026 DosePacker | All Rights Reserved.

Page 7

Cinacalcet not formulary approved, emailed clinic. - Automatically added when the first time the rejection is received and email is sent.

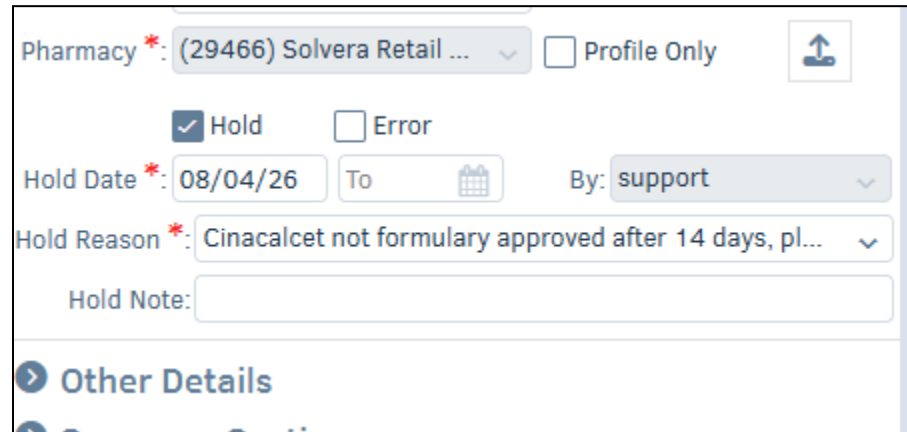

Cinacalcet not formulary approved after 14 days, placed on hold - Automatically added when even after 14 days of rejection the paid status or due to any other reason the 'Waiting on appeals' is not removed.

- The Cinacalcet not formulary approved, emailed clinic gets removed when the 14 days hold tag is added.
- Implemented **automatic prescription hold processing**, placing prescriptions on hold after **14 calendar days** if qualifying FKC claims remain unpaid, while recording the appropriate hold reason

'Cinacalcet not formulary approved after 14 days, placed on hold' and excluding the claim from further automated retransmissions.

The screenshot displays a web form for configuring a prescription hold. The 'Pharmacy' field is set to '(29466) Solvera Retail ...' with a dropdown arrow and a 'Profile Only' checkbox. Below this, the 'Hold' checkbox is checked, and the 'Error' checkbox is unchecked. The 'Hold Date' is set to '08/04/26' with a calendar icon, and the 'By' field is set to 'support' with a dropdown arrow. The 'Hold Reason' is set to 'Cinacalcet not formulary approved after 14 days, pl...' with a dropdown arrow. There is a 'Hold Note' text area below the reason. At the bottom, there is a section titled 'Other Details' with a right-pointing arrow.

If a user manually unholds a prescription without an underlying insurance status change, the next daily scheduled job cycle will re-evaluate the claim and re-apply the Hold if conditions are still met.

- Implemented **automatic prescription unhold** when all applicable FKC claims satisfy the defined unhold conditions below, ensuring prescriptions are restored only when the qualifying rejection no longer exists.
 - The claim receives a Paid status; OR
 - The claim receives a rejection with a rejection code other than 70; OR
 - The claim receives Rejection Code (511-FB) = 70 but the Additional Message Information (526-FQ) is different from "FKC Responsible Not Clinically Approved".
 - Prescription level Hold Reason: "Cinacalcet not formulary approved after 14 days, placed on hold."

4. Workflow & Queue Management

- Introduced the **"Waiting on Appeals"** work bucket, enabling users to quickly identify and manage qualifying prescriptions using the Rx Claim **Custom Status** filter.
- Added system-defined **Custom Status**, **Hold Reason**, and **Letter Template** configurations to ensure standardized workflow across all FRxCare environments.

Benefits:

- **Save Time for Staff:** Shifts pharmacy workers from manual tracking to hands-free automation for emails, patient tags, and prescription holds.
- Instantly groups complex FKC rejections into one clear bucket, speeding up workflow.
- Sends clear, ready-to-use email instructions straight to the clinic, eliminating messy back-and-forth phone calls.

Scope:

In scope:

- Implementation of automated trigger rules for insurance plans configured with **Insurance Plan Type = Internal Plan** and **Internal Plan = FKC Plan**, when the claim receives:
 - Rejection Code (511-FB) = 70 and Additional Message Information (526-FQ) = "FKC Responsible Not Clinically Approved"
- Implementation of the automated "Cinacalcet" email notification and manual option to send the "Cinacalcet" email via the Rx claim screen.
- Automated prescription Hold logic execution after 14 days of non-payment.
- "Waiting on Appeals" bucket creation by selecting the Rx Claim screen, by applying the Custom Status filter→ "Waiting on Appeals".

Out of Scope:

- Removal of the patient tags "Cinacalcet not formulary approved, emailed clinic" or "Cinacalcet not formulary approved after 14 days, placed on hold" - these remain strictly manual processes.
- Rejection Code (511-FB) = 70 with Additional Message Information (526-FQ) = "FKC Responsible Not Clinically Approved" received from any insurance plan / Internal plan other than **"FKC Plan"** is excluded from this automation process.
- Any rejection scenarios other than: Rejection Code (511-FB) = 70; and Additional Message Information (526-FQ) = "FKC Responsible Not Clinically Approved".
- In the upcoming build the automatic bill transmission will be done till 14 days when the rejection code is received reducing manual effort of the user.

2. FAP Manual Review Workflow for Medicare Part D Claims

Implemented a **manual review workflow** for **Financial Assistance Programs (FAP)** claims generated from **Medicare Part D** claim responses. When a paid Medicare Part D claim contains specific **Benefit Stage Qualifier (393-MV)** values and the patient responsibility (copay) is transferred to an FAP insurance plan, the system creates the FAP billing block but prevents automatic claim transmission. The FAP claim remains pending for user review and must be transmitted manually.

Key Enhancements:

1. Medicare Part D Benefit Stage Validation

- Introduced validation for Medicare Part D claim responses containing **Benefit Stage Qualifier (393-MV)** values **01, 02, 03, 50, and 51**.
- Validation is applied only when the latest Medicare Part D claim response is **Paid** or **Captured** and an **FAP insurance plan** exists with the patient.

2. Manual Review Workflow for FAP Claims

- Automatically creates the **FAP insurance billing block** using the existing billing workflow.
- Prevents automatic transmission of the FAP claim when the defined Medicare Part D validation criteria are met.
 - I.e When the store configuration: Auto Transmit Copay to Next Insurance is checked at that time it will create the block of FAP but will not auto transmit the same.
- Keeps the FAP claim pending for **manual review** and allows users to manually transmit the claim after reviewing the Medicare Part D response.

3. Copay Transfer to FAP

- Applied the validation when the **Auto Transmit Copay to Next Insurance** configuration transfers the patient responsibility amount to an FAP insurance plan.
- The manual review workflow also applies when the copay is first transferred to a **Commercial Insurance** plan and subsequently transferred to an **FAP** insurance plan.

4. Retail Workflow Support

- Extended the manual review logic to **Prescription Auto Type, Retail Add Queue, Rx Refill Due, and Alternate NDC** workflows.
- Existing workflows for **Delete Queue, Fill**, claim reversals, receipt generation, and related billing updates continue to function without changes.

Benefits:

- Ensures FAP claims requiring review are not transmitted automatically.
- Improves claim accuracy by requiring user verification before FAP claim submission.
- Preserves existing billing and claim adjudication workflows while introducing controlled manual review.
- Provides consistent processing across Medicare Part D, Retail, Refill, and Copay Transfer workflows.
- Reduces the risk of incorrect FAP claim submissions while maintaining operational flexibility.

3. FAP Copay Rules screen and Triggers.

Enhanced the **Financial Assistance Program (FAP) Auto-Trigger** workflow by introducing Medicare Part D **Low Income Subsidy (LIS)** copay validation. The enhancement automatically detects copay discrepancies and potential FAP billing opportunities based on configured FAP copay rules, while introducing a new **FAP Copay Rules** configuration screen for maintaining expected copay values by store, LIS level, and drug type.

Key Enhancements:

1. New FAP Auto-Trigger Scenarios

- Introduced two new automated FAP auto-trigger scenarios based on **Medicare Part D Low Income Subsidy (LIS)** copay validation:
 - **FAP Billed - Copay Discrepancy** –
 - Automatically assigns the "**FAP Billed - Copay Discrepancy**" custom status when an **FAP insurance plan is billed after a Medicare Part D plan**, the latest approved Medicare Part D eligibility response contains an active **LIS Level (01, 02, or 03)**, and the **patient responsibility (copay)** does not match the configured **FAP Copay Rule**.
 - **FAP Not Billed - Copay Matches FAP Rule** –
 - Automatically assigns the "**FAP Not Billed - Copay Matches FAP Rule**" custom status when an **FAP insurance plan is not billed**, the latest approved Medicare Part D eligibility response contains an active **LIS Level (01, 02, or 03)**, and the **patient responsibility (copay)** exactly matches the configured **FAP Copay Rule**, indicating a potential FAP billing opportunity.
- Auto-trigger validation is performed only when a valid Medicare Part D eligibility response and an applicable FAP copay rule are available

2. Medicare Part D Eligibility Validation

- Added a **365-day eligibility look-back** to identify the latest accepted Medicare Part D eligibility response.
 - I.e Suppose the latest eligibility check does not have LISLIV code but before when eligibility was checked at that time the code was received so that entry will be considered.
- Validates active **LIS Levels (1, 2, or 3)** before executing FAP auto-trigger logic.
- Automatically skips trigger execution when:
 - No approved Medicare Part D eligibility response exists.
 - No active FAP Copay Rule is configured for the applicable Store, LIS Level, Drug Type, and Service Date.
 - The patient responsibility amount is zero or unavailable.

3. FAP Status Management

- Expanded the existing FAP custom status hierarchy by introducing two new system-defined statuses:
 - **FAP Billed - Copay Discrepancy** - The status is set when copay is received from primary insurance and FAP is billed but copay does not match the FAP copay rule.

The screenshot displays the DosePacker software interface. On the left, there are input fields for 'Refill Auth:' (0), 'Bottle Qty:' (56), 'Custom Status:', and 'Narrative:'. The 'Custom Status:' dropdown is open, showing a green button labeled 'FAP Billed - Copay Discre...' with a close icon. Below it, there are two status options: 'B2B Review Required' (orange square) and 'FAP is billed as Primary' (green square). On the right, the 'Insurance Summary' section shows: 'Insurance *:' (AETNA PART D (PCN ME...)), 'Claim Priority *:' (Primary), 'Claimed *:' (\$8.56), 'Status *:' (Paid), and 'Other Coverage Code:' (00 - Not Specified By Patient).

- **FAP Not Billed - Copay Matches FAP Rule** - The status is set when copay is received from primary insurance and FAP is yet not billed but the received copay matches to the FAP copay Rule.

Additional Message

- Integrated the new statuses into the existing FAP status priority framework to ensure only the highest-priority FAP status is assigned to a bill.
 - FAP is billed as Primary
 - FAP After Non-Part D Plan(s)

- FAP Billed - Copay Discrepancy
- FAP Not Billed - Copay Matches FAP Rule
- FAP Plan exists, Claim to FAP Plan

4. FAP Copay Rules Configuration

- Introduced a new **FAP Copay Rules** configuration screen under **Menu → Billing Setup → FAP Copay Rules** to maintain expected FAP copay amounts used by the FAP Auto-Trigger process.

Store	From Date	To Date	LIS Level	Generic Drug - Copay	Brand Drug - Copay
Solvera Retail Pharmacy	08/03/26	08/05/26	LISLIV 1	\$15.51	\$25.51
			LISLIV 2	\$4.00	\$4.00
			LISLIV 3	\$5.51	\$10.51
Solvera Retail Pharmacy	08/01/26	08/02/26	LISLIV 1	\$15.51	\$25.51
			LISLIV 2	\$15.51	\$15.51
			LISLIV 3	\$5.51	\$10.51

- Enables administrators to configure expected copay amounts based on:
 - Store
 - Effective Date Range (From Date / To Date)
 - Medicare Part D LIS Level (1, 2, and 3)
 - Filled Drug Type (Generic and Brand)
- Automatically generates predefined rows for **LIS Levels 1, 2, and 3** whenever a new rule is created, simplifying configuration and ensuring consistency.
- Added support for maintaining separate copay amounts for **Generic** and **Brand** drugs within the same rule.

- Example: When the configuration is done for **LIS Level 1** and for **Generic drugs** the copay is set to **10\$** and for **brand** it is set to **5\$** at that time when a bill is created and patient have FAP insurance at that time if the billed drug is generic and received copay from insurance is exact 10\$ then the status **FAP Not Billed - Copay Matches FAP Rule** will be set.
- And if the copay received is 9\$ or not equal to 10\$ at that time the status: If the FAP plan is **billed**, the system assigns "**FAP Billed - Copay Discrepancy**" will be set.
- Added validations to:
 - Prevent invalid date ranges - Validation that the **From Date** is not later than the **To Date**.
 - Prevent overlapping date ranges for the same store.
 - Support copay values with up to two decimal places, including **\$0.00**
- Configured the logged-in store as the default selection and provided standard search, sorting, and column management capabilities to simplify rule maintenance.
- The configured FAP Copay Rules are automatically referenced by the FAP Auto-Trigger engine to identify **copay discrepancies** and **potential FAP billing opportunities** based on the patient's active Medicare Part D LIS Level and the filled drug type.

Benefits:

- Improves billing accuracy by automatically identifying FAP copay discrepancies before claim submission.
- Helps identify potential FAP billing opportunities based on Medicare Part D LIS copay values.
- Reduces manual effort by automating copay validation against configured business rules.
- Standardizes FAP copay management through configurable store-level copay rules.
- Improves operational efficiency with automatic status assignment and re-evaluation.

4. Patient Changes: Duplicate Check based on EMPI

Added a duplicate patient check during new patient creation. If the system finds patients with matching demographic information, it displays a Patient Matches List for review. Users can choose to merge the new patient with an existing record or continue creating a new patient if no suitable match is found, helping reduce duplicate patient records.

Key Enhancements:

- Introduced an enhanced **duplicate patient** validation during new patient creation.
- When creating a new patient, the system compares the entered **patient demographic** information with existing patient records to identify potential duplicates.
- If matching patient records are found, the system displays a **Patient Matches List** containing the matching patient demographic details for user review.

The following patients are already present in the system. If you want to use an existing patient, click "Select" button or double-click the desired row. To continue creating a new patient, click "Skip & Create New".										
First Name	Last Name	EMPI Code	System Code	MRN	DOB	Gender	SSN	Address	Status	Update Date/Time
NEWTEST	NEWTEST	8002042988	FRXCARE	1500214111	07/31/2007	Male		1234 MAIN ST, LOS ANGELES, CA 90001	Active	08/03/26 09:13 AM
NEWTESTT	NEWTEST	8002042988	FRXCARE	1500214113	07/31/2007	Male		1234 MAIN ST, LOS ANGELES, CA 90001	Active	08/03/26 09:16 AM

- Users can select an existing patient from the **Patient Matches List** and merge the new information with the existing patient record, or proceed with creating a new patient if no suitable match exists.
- The duplicate matching is based on patient demographic information. **EMPI ID is not used as part of the patient matching criteria.**
- This enhancement helps reduce duplicate patient records while providing users the flexibility to merge existing records or create a new patient when appropriate.

Benefits:

- Helps prevent duplicate patient records by prompting users to review similar patient records before creating a new one.
- Makes it easier to maintain accurate patient information by allowing users to merge duplicate records when needed.
- Improves the patient registration process by giving users the option to use an existing record instead of creating a duplicate.

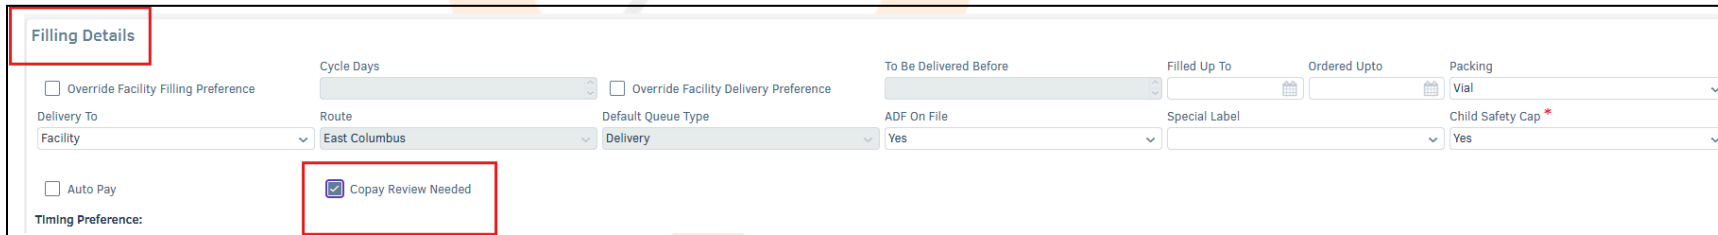

5. Patient Changes: Manual Copay Review Trap

Introduced a new **"Copay Review Needed"** flag in the Patient Profile to support manual financial consent workflows. When enabled, any adjudicated claim with a patient responsibility amount is automatically routed to **Credit Review**, preventing prescription fulfillment until the required patient consent is obtained and the review is completed.

Key Enhancements:

1. Patient Profile Configuration

- Added a new **"Copay Review Needed"** checkbox to the Patient Profile.
- When enabled, all adjudicated bills with a **patient responsibility (copay > \$0)** are automatically routed for manual credit review.
- Positioned the new flag after the **Auto Pay** in Filling Details option in the Patient Demographics.

The screenshot shows the 'Filling Details' section of a patient profile configuration. The 'Filling Details' tab is highlighted with a red box. Below it, the 'Auto Pay' checkbox is unchecked. The 'Copay Review Needed' checkbox is checked and highlighted with a red box. Other fields include Cycle Days, Route (East Columbus), Default Queue Type (Delivery), To Be Delivered Before, Filled Up To, Ordered Upto, Packing (Vial), ADF On File (Yes), Special Label, and Child Safety Cap (Yes).

2. Automated Credit Review Workflow

- Automatically marks eligible bills as **Credit Review**.
 - When a patient has a copay review Needed checkbox checked at that time whenever any bill have copay greater than 0 at that time the bill will be marked as credit review required and the

pharmacy staff obtains the consent from patient and needs to mark it as approved in the consent tab.

- Assigns the **"Credit Review Required"** custom status when a copay is returned.
- Supports pharmacy staff in obtaining financial consent from the patient before processing the prescription.

3. Fulfillment Restrictions

- Prevents prescriptions in **Credit Review** from being filled until the review is completed.
- Allows staff to manually release the bill from Credit Review or cancel the bill if the patient declines the copay by updating the consent.

4. Patient Profile Visibility

- Displays a **"Review Copay"** patient tag whenever the **"Copay Review Needed"** flag is enabled, providing clear visibility to pharmacy staff.

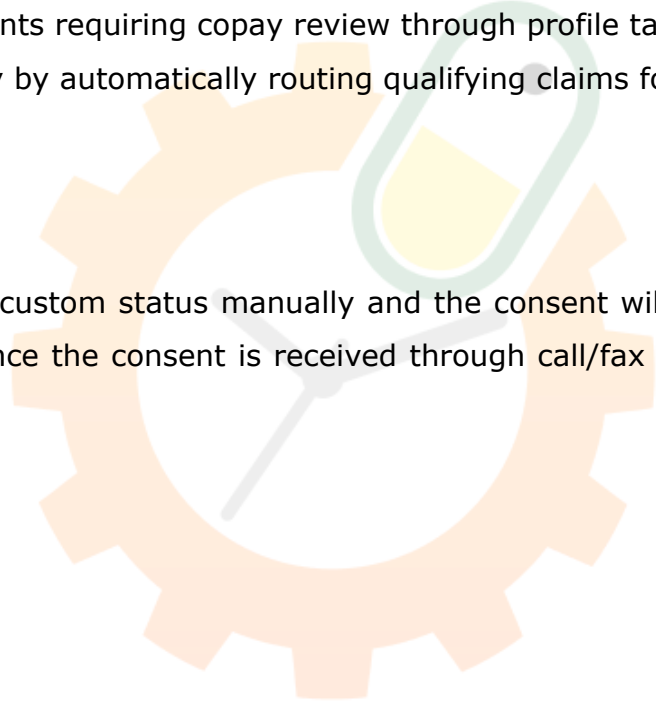

The screenshot displays the DosePacker patient profile interface. At the top, there are three tabs: 'FKC' (green), 'Safety Cap' (green), and 'Review Copay' (orange, highlighted with a red box). Below the tabs is a sidebar menu with options: Dashboard, Demographics (highlighted in purple), Insurance, Contacts, Care Team, Activity, Documents, and Notes & Alerts. The main content area shows various settings. On the right, there is a 'Cycle Days' field. Below it, there are two checkboxes: 'Override Facility Filling Preference' (unchecked) and 'Auto Pay' (unchecked). To the right of these is a 'Route' dropdown menu. At the bottom right, there is a checkbox labeled 'Copay Review Needed' which is checked and highlighted with a red box. Above this checkbox, there is a 'Timing Preference:' label. The interface also includes links for 'Change Patient' and 'Deselect Patient' at the top right.

Benefits:

- Ensures patient financial consent is obtained before prescription fulfillment.
- Reduces the risk of dispensing medications without patient approval of copay responsibilities.
- Provides clear visibility of patients requiring copay review through profile tags and custom statuses.
- Improves workflow consistency by automatically routing qualifying claims for manual review.

Scope:**Future Scope:**

We will allow users to remove the custom status manually and the consent will be blank so that the user don't have to track down the consent once the consent is received through call/fax the user can directly remove the custom status.

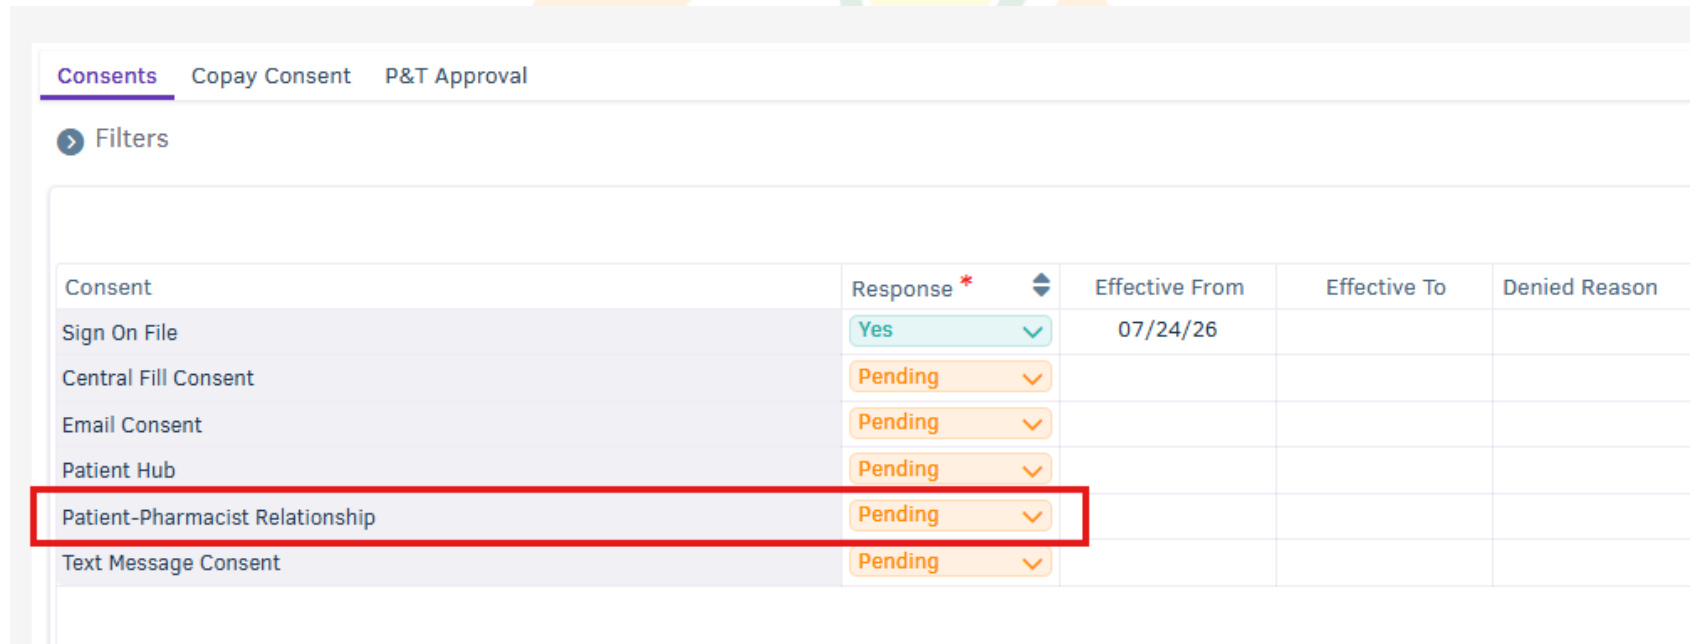

6. Consent Guidelines: Arkansas Patient Relationship Verification Enhancement

To comply with Arkansas state regulations, the system now validates the **Patient-Pharmacist Relationship** consent before allowing prescriptions to be verified for patients whose home address is in Arkansas.

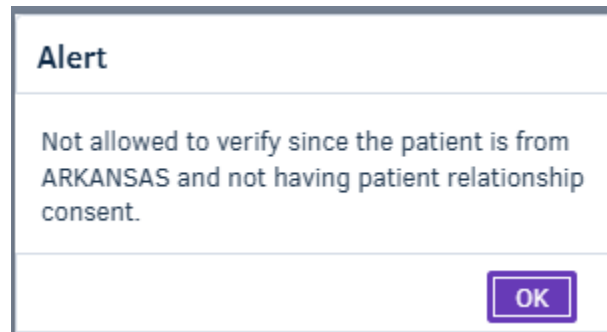

Key Enhancements:

- Added validation during **Rx Verification** for patients with a home address in **Arkansas (AR)**.
- The system checks the existing **Patient-Pharmacist Relationship** consent in the **Patient Profile > Consent** tab.

Consents Copay Consent P&T Approval				
> Filters				
Consent	Response *	Effective From	Effective To	Denied Reason
Sign On File	Yes	07/24/26		
Central Fill Consent	Pending			
Email Consent	Pending			
Patient Hub	Pending			
Patient-Pharmacist Relationship	Pending			
Text Message Consent	Pending			

- Verification is blocked if the consent status is **Pending** or **No**.
- Users will receive the following message when attempting to verify:
 - "Not allowed to verify since the patient is from Arkansas and not having patient relationship consent."

- Verification proceeds normally when the consent status is **Yes**.
- **Patient-Pharmacist Relationship** consent record to be used with the supported response values:
 - Pending
 - No
 - Yes
- The default value will be set to pending, Once the user receives the approval user needs to manually update the consent to Yes.
- Once the consent record is set to Yes the users will be allowed to verify the prescriptions.

Benefits:

- Ensures compliance with Arkansas state regulations requiring a documented pharmacist-patient relationship before prescription verification.
- Prevents unauthorized verification, billing, and dispensing when the required consent has not been obtained.
- Reduces regulatory risk by enforcing mandatory consent validation during the prescription workflow.

7. Filter status exclusion and new status Inclusion in the retail workflow

Key Enhancements:

1. New Queue-Level columns.

- Added the following columns to the **Retail Workflow** screen across all views: Group by Pack, Group by Order, Only Rx, Quick View, Retail Workflow (Default View).
 - Queue No.
 - Delivery Priority
 - Delivery Mode

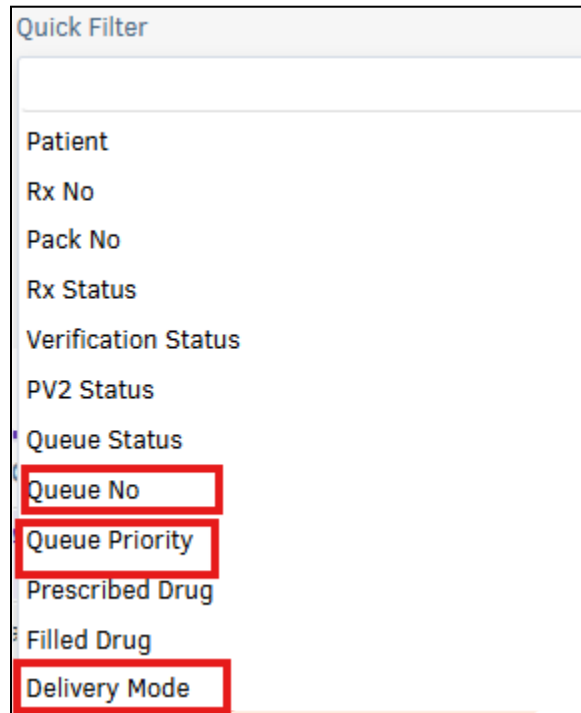

Note: Delivery Priority and Delivery Mode filters and columns use the **queue-level** values.

Ref.	Filled By	Last Billed	Queue No.	Delivery Priority	Delivery Mode
0			Q00000004537	Urgent	Ground
0			Q00000004536	Medium	Ground

2. Quick Filter Enhancements

- Added the following options to the **Quick Filter** across all Retail Workflow views:
 - Queue No.
 - Queue Priority
 - Delivery Mode

Note: Queue Priority and Delivery Mode in the Quick Filter also use the **queue-level** values.

The image shows a 'Quick Filter' dropdown menu. The menu is open, displaying a list of filter options. The options are: Patient, Rx No, Pack No, Rx Status, Verification Status, PV2 Status, Queue Status, Queue No, Queue Priority, Prescribed Drug, Filled Drug, and Delivery Mode. The options 'Queue No', 'Queue Priority', and 'Delivery Mode' are highlighted with red rectangular boxes. The background of the page features a large, faint orange gear icon.

3. Queue Status Updates:

- Added the following **Queue Status** filter options specifically for **Central Filling** transactions:
 - Order Sent
 - Order Cancelled
 - Order Rejected
 - ORder Invalid Response
- Removed the following statuses from the **Queue Status** dropdown:

- Next Delivery
- Generated
- Processed
- Error
- Degenerate

Queue Status

All

Not Filled

Order Cancelled

Order Invalid Response

4. Queue Number Hyperlink

- The Queue No. column is now displayed as a hyperlink. Selecting a Queue Number opens the Edit Queue modal, allowing users to view and update queue details.

- A context menu has been added to the Queue Edit modal, providing access to the **Merge** and **Activity** options.

8. Fill Validation Based on Queue Status

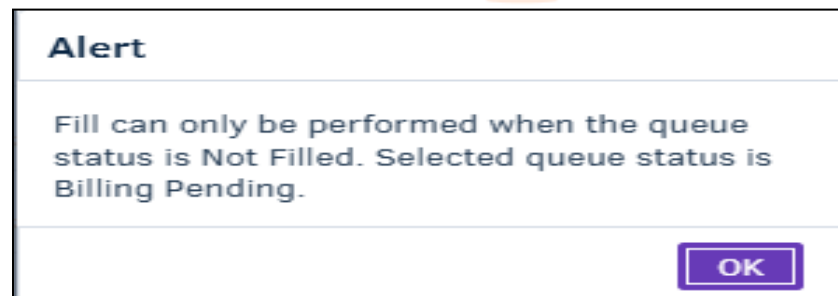

Key Enhancement:

This release introduces new validation logic for Rx filling based on the queue-level status, ensuring that fill actions are performed only when the queue is in the appropriate state.

1. Normal Filling / Remote Filling

The fill process now validates the queue-level status before allowing Rxs to be filled.

- If a queue contains one or more Rxs and **all Rxs are billed**, resulting in a **Not Filled** status for both the Rxs and the queue, users can proceed with the fill operation.
- If any Rx within the queue has a status other than **Not Filled**, the queue status will reflect the appropriate queue status (for example, **Billing Pending**). In this scenario, the fill operation will not be allowed.
- When users click **Fill** for an ineligible queue, the following message is displayed:
"Fill can be performed only when the queue status is 'Not Filled'. The selected queue status is 'Billing Pending'."[Here status billing pending is an example, it will show the status of the queue.]
- Selecting **OK** closes the message, and no further action is performed.

2. Central Filling

The validation logic for Central Filling has also been enhanced to ensure only eligible queues are sent to the designated filling partner.

- If a queue contains one or more Rx's and **any Rx has not been billed**, the queue will **not** be sent for Central Filling.
- A queue is eligible to be sent to the filling partner only when all Rx's in the queue have been billed.
- When all Rx's are billed, the queue status is updated to **Order Sent**.
- If all or one of the Rx's are not billed, the queue status is determined based on the **lowest (minimum) status** among the Rx's in the queue.
- Only queues with an **Order Sent** status can be transmitted to the designated Central Filling partner.

9. Removal of Pickup and Waiting Queue Tabs

Key Enhancement:

To streamline the Retail Workflow for FRx Care, the Pickup and Waiting queue tabs have been removed from the Retail Workflow screen.

- Removed the **Pickup** and **Waiting** queue tabs from the Retail Workflow.
- The Retail Workflow now displays and supports only the **Delivery** queue type along with All and Not in Queue Tab.

The screenshot displays the FRxCARE Retail Workflow interface. At the top, there are two tabs: 'All' and 'Delivery'. The 'Delivery' tab is currently selected and highlighted with a red box. To the right of these tabs, it says 'Not in Queue 0'. Below the tabs is a search bar labeled 'Search Patient'. On the left side, there is a sidebar with a 'Bill, Credit' section showing '10 | 12 | 0 | 3'. The main content area is divided into several sections: 'Patient Info' (showing a patient named Bill, Credit, (PT37658) with MR no.: 123456, Male, DOB 08/06/1958, and a balance of \$221.38), 'Insurance' (listing MEDICALRX1, ADVCRK, and 04000001), 'Allergy' (No Allergies Recorded), 'Diagnosis' (No Diagnosis Recorded), 'Notes & Alerts' (No Notes/Alerts found, with a 'Show seen' link), and 'Vitals' (No Vitals Recorded). At the bottom right, there are two buttons: 'Show All Rx(s)' and 'Profile DUR'. A large, faint gear icon is visible in the background of the page.

10. Central Fill Status Enhancements

Key Enhancements:

This release introduces **Central Filling** functionality for FRx Care, enabling Rx fulfillment through external filling partners and improving queue status management, vendor communication, and billing validations.

Central Filling Workflow:

- If a drug has an external filling partner, the Rx will be considered for Central Filling.
- Once all Rxs in a queue are successfully billed, the queue status will be updated to Order Sent.
- When the queue status is Order Sent, Rx details will be transmitted to the respective filling partner through the vendor.
- The queue status will be updated based on the response received from the filling partner.

▼	☐	00000004530	Due	2 0	08/05/26 09:14 AM	Status: Order Sent	Type: Delivery	Priority: Urgent
☐		930028832	EVEROLIMUS 5 MG TABLET (72603025501)	EVEROLIMUS 5 MG TABLET (72603025501)	B 5 white oblong	08/05/26	08/05/26	12 12

Response Handling:

Acknowledgement (ACK) Response:

- Upon receiving an ACK response from the vendor, the queue status will be updated to **Checked**.
- When the queue status is **Checked**:
 - Pack creation will be performed automatically.
 - PV2 completion will be performed automatically.

- The PV2 user name will be captured as the system user.

▼ ☐ 00000004534	1 0	08/07/26 01:30 PM	Status: Checked	Type: Delivery	Priority: Medium

				12	12

Dispense Response:

- Upon receiving a Dispense response, the queue status will move to **Delivery In Progress**.
- A delivery number will also be generated automatically.
- The system will automatically move the pack through the delivery workflow:
 - Pre-Delivery
 - Delivery Ready
 - Delivery In Progress

▼ ☐ 00000004520	Due	1 0	08/05/26 07:53 AM	Status: Delivery In Progress	Type: Delivery	Priority: Urgent

Order Invalid Response:

- If any issue occurs during file generation or transfer between WebIPS and the filling partner, the queue status will be updated to **Order Invalid Response**.

Billing Validation:

- For queues associated with an external filling partner:

Restricted Billing Actions:

- When the queue status is **Order Sent, Checked, Delivery In Progress, or any subsequent status**, users will not be allowed to:
 - Edit bills
 - Delete bills
 - Reverse bills
- Editing values from the Billing and Rx Claim screens will also be restricted.
- Secondary transfer and secondary insurance reversal will remain allowed. These actions will not impact the bill status.

Allowed Billing Actions:

- When the queue status is **Not Billed, Billing Pending, In Error, Order Rejected, Order Cancelled, or Order Invalid Response**, users can continue to:
 - Edit bills

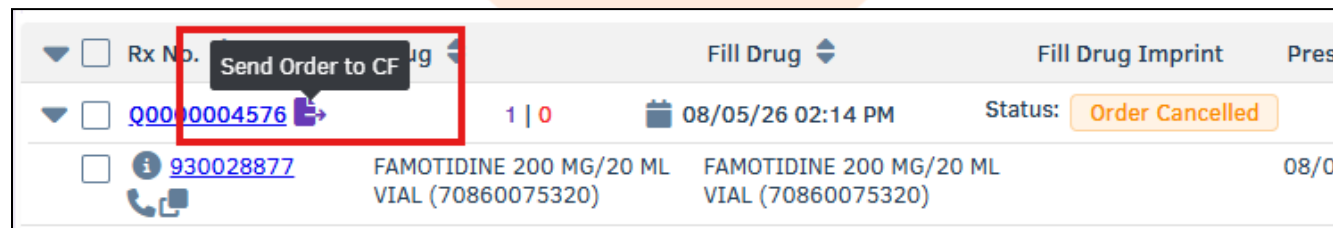

- Delete bills
- Reverse bills as per the existing workflow.

Central Filling Queue Indicator:

- A Central Filling icon will be displayed next to the Queue Number for queues associated with an external filling partner.
- The icon behavior will be based on the queue status and is enabled for
 - Order Cancelled
 - Order Rejected
 - Order Invalid Response

And Disabled for all other queue statuses.

- Hovering over the icon will display:
 - When icon is enabled then on hovering over the icon should display “send order to CF”

Upcoming Release :

- The system currently utilizes order nomenclature due to ongoing integration updates; however, this will be standardized to Queue across all modules in a future release.

11. Queue State and Modification Logic.

Key Enhancements:

This release introduces enhanced validation for Add Rx to Queue, Move to Queue, Merge Queue, and Remove from Queue actions. The system now controls these actions based on the relationship between the Source Store and Filling Partner, along with the current Queue Status.

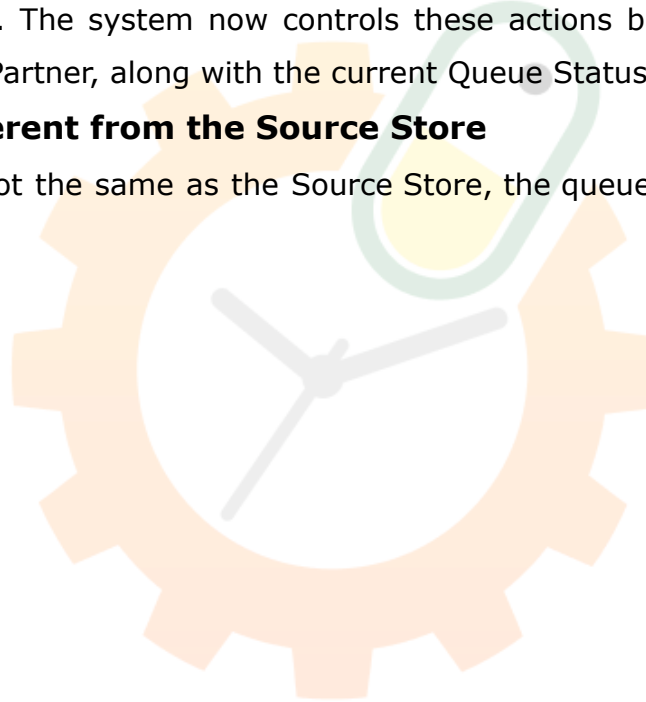

1. Filling Partner is Different from the Source Store

When the Filling Partner is not the same as the Source Store, the queue is considered closed if it is in any of the following statuses:

- Delivery Ready
- Delivery In Progress
- Completed
- Checked
- Partially Checked
- Pre-Delivery
- Order Sent
- Not Checked
- Not Filled

For queues in these statuses:

- Editing queue details is not permitted.

Queue Setup

Queue Type *	Delivery Date and Time *	Delivery Batch
Delivery	08/05/2026 07:53 AM	DB0727410 - Today 07:5...
Priority *	Delivery Mode *	Deliver To
Urgent	Ground	Patient
Filling Partner		
(FAC29532) HealthDyne		
Deliver To Address		
winterfell, LOS ANGELES, CALIFORNIA 90008, US		
☐ Saturday delivery		

Close

- Adding new Rx's to the queue (either manually or automatically) is not permitted.
- **Move to Queue** and **Merge Queue** actions are not permitted.

Alert

The queue cannot be merged because it is currently in Not Filled status

OK

- **Remove from Queue** is not permitted.

▼	☐	Q0000004520	Due	1 0	08/05/26	Send Email	Delivery In Progress	Type: Delivery

	☐					Print Drug Monograph		

2. Filling Partner is the Same as the Source Store.

When the Filling Partner is the same as the Source Store, the queue is considered closed if it is in one of the following statuses:

- Delivery Ready
- Delivery In Progress
- Completed

For queues in these statuses:

- Editing queue details is not permitted.
- Adding new Rx's to the queue (either manually or automatically) is not permitted.
- **Move to Queue** and **Merge Queue** actions are not permitted.
- **Remove from Queue** is not permitted.

3. Filling Partner is the Same as the Source Store

When the Filling Partner is the same as the Source Store and the queue is in one of the following statuses:

- Checked
- Not Checked
- Not Filled
- Pre-Delivery

The following actions are allowed:

- Add Rx's to an existing queue (manually or automatically).
- Perform **Move to Queue** and **Merge Queue** operations.

Queue Number	Queue Type	Date	Status
Q0000004534	Delivery	08/07/26 09:30 AM	Checked

- After a **Move** or **Merge** operation, the queue status is recalculated and updated based on the lowest (minimum) applicable queue status.

4. Applicable Regardless of Filling Partner

The following queue statuses remain editable regardless of whether the **Filling Partner** matches the **Source Store**:

- Not Billed
- In Error
- Credit Review
- Order Cancelled
- OrderRejected
- Order Invalid Response

For queues in these statuses:

- Rxs can be added to the existing queue either manually or automatically.
- **Move to Queue** and **Merge Queue** operations are supported.
- Following a **Move** or **Merge** operation, the queue status is recalculated and updated based on the lowest (minimum) applicable queue status.

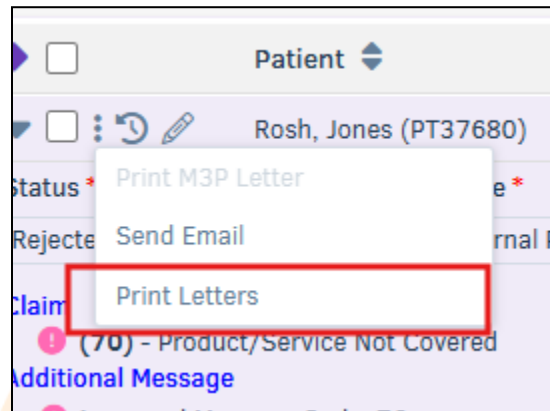

12. Letters: FL Medicaid Notification Letter

Introduced a new **FL Medicaid Notification Letter** workflow to simplify the generation of Florida Medicaid rejection notifications. The enhancement adds a **Print Letters** option in the **Rx Claim** screen, enabling pharmacy staff to manually generate, print, fax, or email the notification letter using a system-defined template while supporting the required **Fair Hearing Act Brochure** for regulatory compliance.

Key Enhancements:

1. Print Letters Option

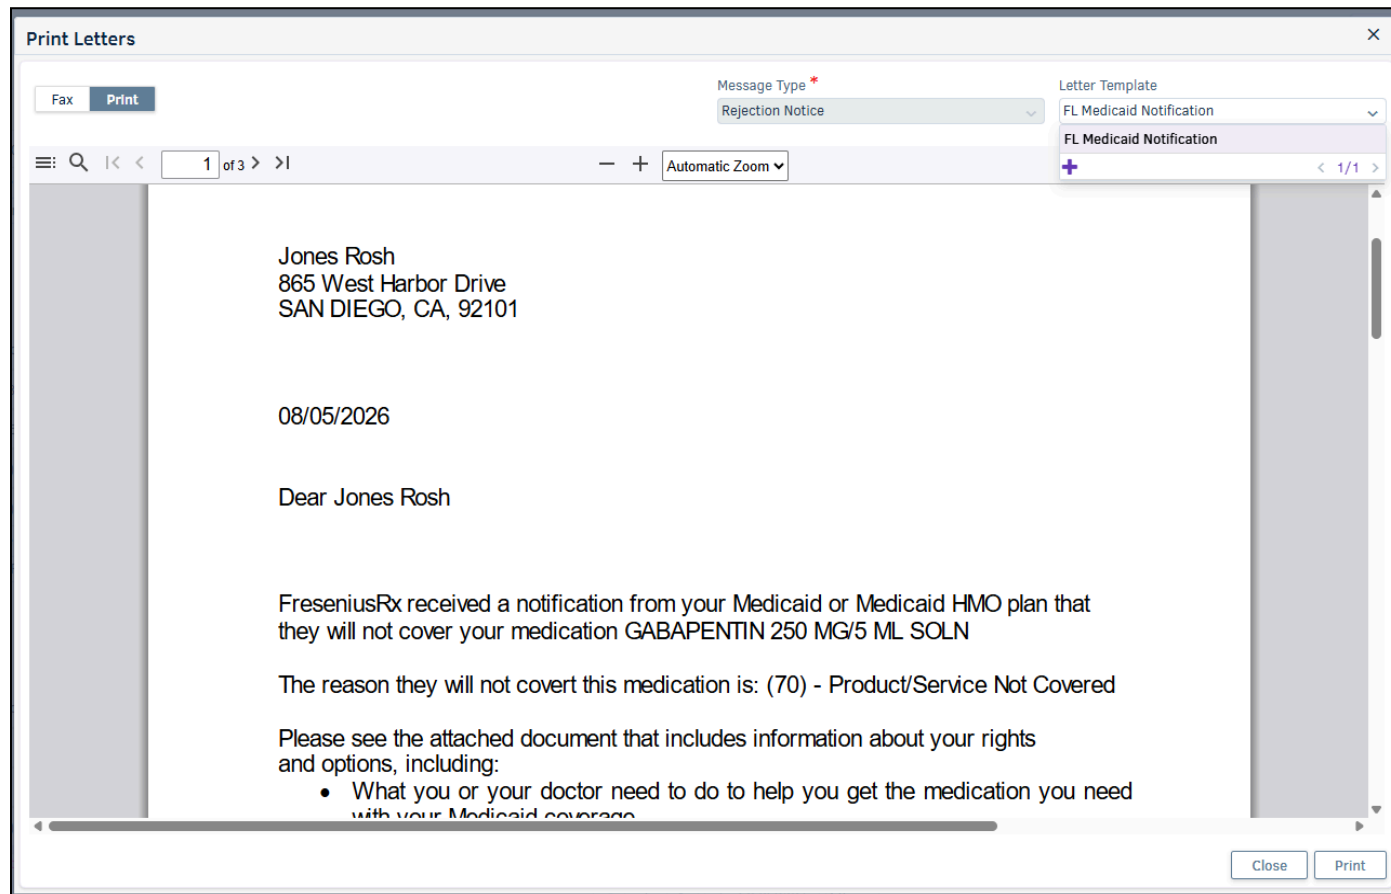

- Added a new **Print Letters** option under **Rx Claim** → **More Options**.
- Enables Insurance Leads and Pharmacy Staff to manually generate the **FL Medicaid Notification Letter**.
- The Print Letters option will be available for all the claims.
 - The system **does not hard-block** or restrict printing based on rejection codes. The Insurance Lead or Pharmacy Staff must manually verify that a qualifying rejection code (70, 56, 69, 52, M1, 40, 76) is present in Claim History → Insurance Response prior to generating the letter.
- Supports manual verification of qualifying Florida Medicaid rejection codes before generating the letter.

2. Automated Letter Population

Once user clicks on the Print Letters option the screen automatically populates the notification letter template as FL Medicaid Notification with:

- Patient name and address
- Current store date
- Drug name
- Rejection reason (for qualifying Florida Medicaid rejection codes)
- Pharmacy contact information
- Automatically attaches the **Fair Hearing Act Brochure** after the details.

3. Email & Fax Support

- Added the **FL Medicaid Notification Letter** as an email template available from **Rx Claim** → **More Options** → **Send Email**.

- When the user selects the template FL medicaid notification letter at that time it auto populates the details and body of the template using the selected template.
- Automatically attaches the **Fair Hearing Act Brochure** when sending the notification via email.
- For **Print** and **Fax**, automatically appends the Fair Hearing Act Brochure to the notification letter as a single document.

4. System-Defined Letter Template

- Introduced a new system-defined **FL Medicaid Notification Letter** template.
- Allows users to edit and save template content while preventing deletion of the system-defined template.

Benefits:

- Streamlines the creation of Florida Medicaid notification letters.
- Improves consistency of patient communications across all pharmacy locations.
- Supports Florida Medicaid regulatory requirements by automatically including the required Fair Hearing Act Brochure.

Scope:

In Scope

- Addition of the **Print Letters** option under **Rx Claim → More Options**.
- Manual generation of the **FL Medicaid Notification Letter**.
- Automatic population of patient, prescription, pharmacy, and rejection details.
- Support for Print, Fax, and Email communication channels.
- Automatic inclusion of the **Fair Hearing Act Brochure** based on the selected communication method.
- Introduction of a system-defined **FL Medicaid Notification Letter** template.

Out of Scope

- Automatic generation of notification letters based on claim rejection codes.
- Restricting or blocking letter generation for non-qualifying rejection codes; verification remains a manual responsibility of pharmacy staff.

13. Reports: Customer Rx Listing

A new Customer History Report data component has been introduced to support the Custom Rx Listing Summary Report. This enhancement allows pharmacies to generate configurable Customer Rx Listing reports that provide a printable summary of each prescription.

Key Enhancements:

1. Workflow Setup

- A new data component named **Customer History Report** has been added to **Workflow Setup**.
- To create a report bucket, select **Customer History Report** as the data component while configuring the workflow.

2. Functional Flow

- When a bill is generated with the **Insurance/bill** then a new entry will be shown in the report .
- If the insurance is updated to **Bill Later**, the corresponding prescription associated with that bill is excluded from the report.
- When the report is grouped by **Patient Information**, the selected patient details are displayed immediately below the column headers for each patient group.
- Users can:
 - Reorder report columns.
 - Configure custom display names for columns through **Workflow Setup** or **Filter Criteria**.
- The report displays:
 - **Total Copay** for each patient at the end of that patient's prescription list.

- **Grand Total Copay** for all patients on the final page of the report.

3. Implementation Team Steps: For Create the Customer History Report

a. Create a Report Bucket

- Navigate to the Workflow Setup → Create/Edit Workflow → Add Bucket.
- Select Customer History Report as the Data Component.

b. Configure Filter Criteria

- Store
- Service From Date (Fill Date)
- Service To Date (Fill Date)
 - For example, First day of the month → Last day of the month

c. Configure Report Columns in Mentioned Order

Add the required columns and configure the following display names as required.

(Format Column Name → Column Display Name)

- Store
- Rx Filled Number → Rx#
- Prescribed Date → Rx Date
- Service Date → Fill Date
- Patient Information → Report For
- Patient Chart Number → Customer ID
- Filled NDC → NDC

- Filled Drug → Drug Description
- Quantity → Qty
- Prescriber → Prescriber's Name
- Insurance Plan → Third Party Plan
- Facility Name
- Facility Code

d. Configure Grouping

Add the following grouping configuration:

- **Group By: Patient Info**

e. Configure Sorting: Sorting can be configured based on the client's reporting preference.

f. Configure Report Header

Include the following applied filter values in the report header

- Service From Date
- Service To Date

4. Available Search Filters

Users can generate the report using any combination of the following filters:

The screenshot displays the 'Filters' section of the DosePacker application. It features a grid of input fields for various search criteria. The 'Store' field is populated with '(29466) Sol...'. The 'Service Date' range is set from '07/01/26' to '07/31/26'. The 'Patient' field has a search prompt 'Search Patient - lname fname dob r...'. The 'Patient SSN' field is empty. The 'Rx No' field is empty. The 'Filled Drug' field is empty. The 'Prescriber' field is empty. The 'Insurance Plan' field has a search prompt 'Search by Name #BIN %PCN'. The 'Bill Type' field is empty. The 'Bill No.' field is empty. The 'Facility' field is empty. There is a checkbox for 'Only Dispense Rx'. At the top right, there are buttons for 'Print Setup', 'Reset', 'Print', 'Select Criteria', 'Save Criteria', and 'Retrieve'.

Store	Service Date	Patient	Patient SSN	Rx No	Filled Drug
(29466) Sol...	07/01/26 - 07/31/26	Search Patient - lname fname dob r...			
Prescriber	Insurance Plan	Bill Type	Bill No.	Facility	
	Search by Name #BIN %PCN				☐ Only Dispense Rx

Users can define the reporting period by selecting the appropriate **Service Date (Fill Date)** range, such as:

- Weekly
- Monthly
- Yearly
- Custom Date Range

5. Configurable Report Grid

The Customer Rx listing Report supports configurable layouts, allowing pharmacies to customize the information displayed according to their operational requirements.

The report supports independent column configuration for:

- **List View** – Displays data within the workflow grid.
- **Print View** – Defines the columns included in the printed report.
- **Export View** – Defines the columns included in exported files.

6. Display Name Configuration

Users can assign custom display names to report columns within the **Filter Criteria** configuration.

- If a custom display name is provided, it is displayed in the **List**, **Print**, and **Export** views.
- If no display name is specified, the system displays the default column name.

7. Copy Column Configuration

To simplify report configuration, users can copy the **List** column layout directly to the **Print** or **Export** layouts by clicking the **Arrow** icon available next to the **List** column configuration.

14. Open Credit Component Label Changes and Summary Section (Lisa's Point: Item 25)

This enhancement improves the **Open Credit** component displayed from the **Patient Ledger** and **Account Receivable** → **Patient OC Detail View** by adding a **Summary** section. This enhancement enables users to quickly view the total payment, reconciled, refund, and open credit amounts without manually calculating totals across multiple pages.

Key Enhancements:

1. Open Credit Component Label Updates

The following column labels will be updated in the **Open Credit** component to improve clarity and consistency:

- Rename **Amount** to **Payment Amt**
- Rename **Applied** to **Reconciled Amt**
- Rename **Refund** to **Refund Amt**

2. Summary Section

A new Summary section will be added at the bottom of the Open Credit component.

The Summary section will display the following totals:

- **Total Payment Amt:** Sum of all Payment Amt values across all records in the grid.
- **Total Reconciled Amt:** Sum of all Reconciled Amt values across all records in the grid.
- **Total Refund Amt:** Sum of all Refund Amt values across all records in the grid.
- **Total OC:** Total Open Credit amount calculated using the existing business logic across all records.

Note:

- Summary values must be calculated using all records in the result set.

- Totals must not change based on pagination and should remain consistent regardless of the page currently being viewed.

[illegible]

15. Eligibility Automation – Patient Insurance Creation & Update

A new Store Configuration setting, **"Create/Update Patient Insurance Details from Eligibility Response,"** has been introduced to automate the management of patient insurance creation.

When this configuration is enabled, the system will automatically create a new insurance plan and patient insurance record or update the existing patient insurance details based on the information received in the Eligibility Response. This enhancement eliminates the need for manual user intervention, improves data accuracy, and streamlines the insurance onboarding and maintenance process by ensuring that patient insurance information remains synchronized with the latest eligibility data.

Key Enhancements:

Store Configurations:

A new Store Configuration option, **"Create/Update Patient Insurance Details from Eligibility Response,"** has been introduced to automate the creation and maintenance of patient insurance information based on the Eligibility Response.

Configuration

- Navigate to **Store Configurations → Other Settings → Create/Update Patient Insurance Details from Eligibility Response.**
- By default, this checkbox is **unchecked.**
- To utilize this feature, **Auto Eligibility** must also be configured under **Store Configurations → Other Settings → Auto Eligibility** by enabling one or more of the following triggers:
 - New Patient Creation
 - First Prescription Creation

- Rejection Codes **68** and **69**

System Behavior

- When both **Auto Eligibility** and **Create/Update Patient Insurance Details from Eligibility Response** are enabled, the system will automatically process the Eligibility Response and create or update patient insurance information without requiring manual user intervention.

Example:

If **Auto Eligibility** is enabled with **New Patient Creation** selected, and the **Create/Update Patient Insurance Details from Eligibility Response** option is also enabled, the system will automatically perform an Eligibility Check whenever a new patient is created. Based on the Eligibility Response, if valid insurance information (such as **BIN** and **PCN**) is received, the system will automatically create the corresponding insurance plan (if it does not already exist) and add the insurance to the patient's insurance profile.

Patient Insurance Creation

After the Insurance Plan has been successfully identified or created, the system will automatically create or update the Patient Insurance record based on the applicable matching criteria, ensuring that the patient's insurance information is synchronized with the latest Eligibility Response.

Create / Update Patient Insurance details from Eligibility Response: ☒

Auto Create/Update FAP Plan from Eligibility: ☒

Auto Create/Update M3P Plan from Claim Response: ☒

Conditions for Insurance Plan Creation and Patient Insurance Creation:

The system will automatically create or update an Insurance Plan and Patient Insurance record only when the following conditions are satisfied:

Eligibility Response Validation

1. The Eligibility Response must contain the **AM21** segment along with the **AN** segment having a value of **"A" (Accepted)**.
2. If the **AM21** segment is present but the **AN** segment contains **"R" (Rejected)**, the system will **not** create or update any Insurance Plan or Patient Insurance record.
3. Both **BIN** and **PCN** values must be present in the Eligibility Response.
4. If either the **BIN** or **PCN** value is missing, the system will not perform any insurance creation or update.

Insurance Plan or Patient Insurance Creation

1. When the Eligibility Response contains a unique combination of **BIN** and **PCN**, the system evaluates the existing Insurance Plan records before performing any action.
 - a. If no matching Insurance Plan exists with received **BIN** and **PCN** number in the system, a new Insurance Plan will be created automatically.
 - b. The received **PCN** value will be used as the **Insurance Plan Name**.
 - c. The received **BIN** and **PCN** values will be stored in the newly created Insurance Plan.
 - d. Once the Insurance Plan is created successfully, the system will automatically associate the newly created plan with the patient's insurance profile by creating a Patient Insurance record.
2. If the **BIN** and **PCN** values received in the Eligibility Response match an existing Insurance Plan, the system will **not** create a new Insurance Plan. Instead, it will evaluate the patient's existing insurance records and perform the appropriate action based on the following conditions:
 - a. No Matching Patient Insurance Found
 - i. If no Patient Insurance record exists with the received **BIN** and **PCN** combination, the system will automatically create a new Patient Insurance record.
 1. The following information will be populated from the Eligibility Response:
 - a. Insurance plan from the matched insurance plan setup
 - b. Member ID
 - c. Group ID
 - d. Effective From Date
 - e. Effective To Date
 2. The newly created Patient Insurance record will be assigned the **Primary** insurance priority.

- b. Single Matching Patient Insurance Found
 - i. If a single Patient Insurance record (either **Active** or **Inactive**) matches the received **BIN** and **PCN** combination, the system will update the existing record with the latest information received in the Eligibility Response, including:
 - 1. Member ID
 - 2. Group ID
 - 3. Effective From Date
 - 4. Effective To Date
- c. Multiple Matching Patient Insurance Records Found
 - i. If multiple Patient Insurance records (either **Active** or **Inactive**) match the received **BIN** and **PCN** combination, the system will identify the **most recently created** Patient Insurance record.
 - ii. The latest matching record will be updated with the insurance information received in the Eligibility Response, including:
 - 1. Member ID
 - 2. Group ID
 - 3. Effective From Date
 - 4. Effective To Date

3. Patient Insurance, Policy Renewal create and update.

- a. **Received Same Effective Date and To Date in the eligibility response:** The Effective Date and To Date in the patient's insurance match the dates received in the eligibility response, the system compares the remaining insurance details.

- i. If any insurance information is different, only those details are updated.
 - ii. The existing policy is retained.
 - iii. No new insurance policy is created.
- b. **Patient Insurance Record Contains a Termination (To) Date:** When an existing Patient Insurance record contains a Termination (To) Date, the system evaluates the policy status against the Effective Date received in the Eligibility Response and performs the appropriate action as described below.
 - i. Existing Policy Has Expired: If the Termination (To) Date of the existing Patient Insurance record is earlier than the Effective Date received in the Eligibility Response:
 - 1. The existing Patient Insurance record will be marked as Inactive.
 - 2. A new Patient Insurance record will be created to represent the renewed policy.
 - 3. The Effective From Date of the new record will be set to the Effective Date received in the Eligibility Response.
 - 4. The Termination (To) Date will be populated with the Termination Date received in the Eligibility Response. If no Termination Date is provided, the field will remain blank.
 - ii. Existing Policy Is Still Active: If the Termination (To) Date of the existing Patient Insurance record is equal to or later than the Effective Date received in the Eligibility Response:
 - 1. The existing Patient Insurance record will remain unchanged.
 - 2. No new Patient Insurance record will be created, as the current policy is considered active and valid.
- c. **Patient Insurance Record Does Not Contain a Termination (To) Date:** When an existing Patient Insurance record does not contain a Termination (To) Date, the system evaluates the

Effective Date received in the Eligibility Response and performs the appropriate action based on the following conditions.

- i. Eligibility Response Does Not Contain an Effective Date
 - 1. No changes will be made to the existing Patient Insurance record.
- ii. Eligibility Response Contains an Effective Date
 - 1. **Existing Policy Started Before the New Effective Date:** If the Effective From Date of the existing Patient Insurance record is earlier than the Effective Date received in the Eligibility Response:
 - a. The existing Patient Insurance record will be updated by setting its Termination (To) Date to one day prior to the new Effective Date.
 - b. The existing Patient Insurance record will be marked as Inactive.
 - c. A new Patient Insurance record will be created and marked as Active.
 - d. The Effective From Date of the new record will be set to the Effective Date received in the Eligibility Response.
 - e. The Termination (To) Date of the new record will be populated with the Termination Date received in the Eligibility Response. If no Termination Date is received, the field will remain blank.
 - 2. **Existing Policy Starts On or After the New Effective Date**
 - a. If the Effective From Date of the existing Patient Insurance record is equal to or later than the Effective Date received in the Eligibility Response:
 - i. No changes will be made to the existing Patient Insurance record.

- ii. No new Patient Insurance record will be created, as the existing policy already covers the applicable effective period.

3. Eligibility Response Does Not Contain an Effective Date

- a. If the Eligibility Response does not include an Effective Date, the system cannot determine the policy coverage period. Therefore:
 - i. The existing Patient Insurance record remains unchanged.
 - ii. No Patient Insurance information is updated.
 - iii. No existing policy is marked as Inactive.
 - iv. No new renewal Patient Insurance record is created.

4. If no insurance information is received in the eligibility response, the user should manually verify eligibility using the following tools/resources:

- a. MedReview
- b. DI
- c. Humana LINET
- d. Documents under Patient Profile
- e. Passport
- f. Medicaid Spreadsheet (if MCO)
- g. EScript Data
- h. Express Scripts
- i. Calling the payer directly

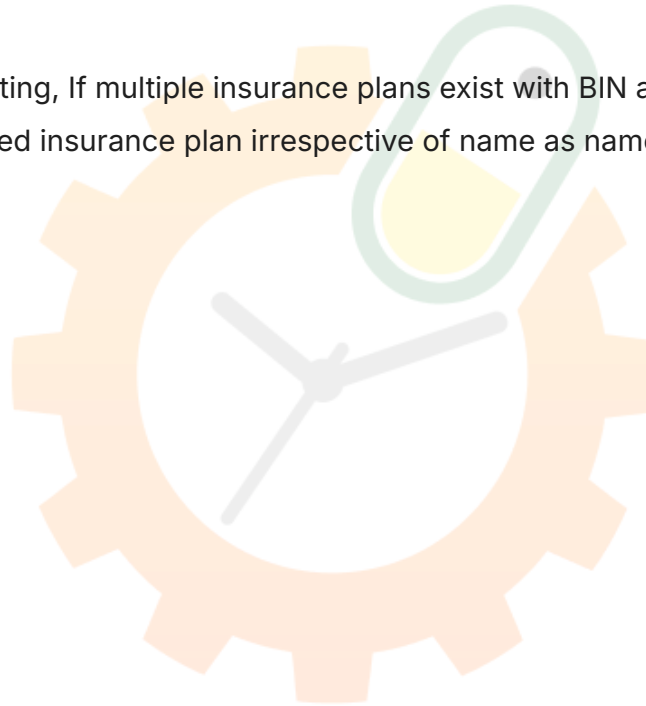

5. Business Benefits

- a. Automates Insurance Plan and Patient Insurance creation and updates from Eligibility Responses.
- b. Reduces manual effort and improves operational efficiency.
- c. Improves the accuracy and consistency of patient insurance data.
- d. Prevents duplicate Insurance Plan creation through BIN and PCN validation.
- e. Automatically renews expired insurance policies based on eligibility information.

- f. Keeps patient insurance records synchronized with the latest Eligibility Response.
- g. Ensures consistent insurance processing using predefined business rules.
- h. Minimizes data entry errors and enhances overall productivity.

Out of Scope

- i. As discussed in the meeting, If multiple insurance plans exist with BIN and PCN in the insurance plan setup, consider the latest created insurance plan irrespective of name as name is not sent in the claim Response.

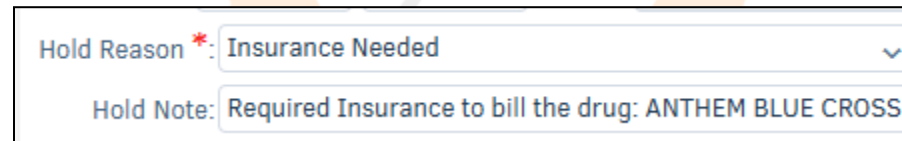

16. Prescription - Hold Note Enhancement

Enhanced the P&T approval workflow by improving the hold note displayed when a prescription is placed on hold due to missing required insurance.

Key Enhancements:

- Updated the hold note generation logic for prescriptions that require **P&T Approval** based on the **Drug Bill to Setup** configuration.
- When a typed drug has a matching **Drug Bill to Setup** configuration, but the required insurance specified in the setup is not available on the prescription, the prescription will continue to be placed on hold as per the existing workflow.
- The hold note has been enhanced to explicitly display the **name of the required insurance** configured in the **Drug Bill to Setup**, enabling users to identify which insurance must be billed to proceed.

The screenshot shows a software interface with two fields. The top field is labeled 'Hold Reason *:' and has a dropdown menu with 'Insurance Needed' selected. The bottom field is labeled 'Hold Note:' and contains the text 'Required Insurance to bill the drug: ANTHEM BLUE CROSS'.

Benefits:

- Provides clearer guidance to pharmacy users by identifying the specific insurance required for P&T processing.
- Reduces confusion and manual investigation when prescriptions are placed on hold.
- Improves workflow efficiency and helps expedite resolution of P&T-related holds.

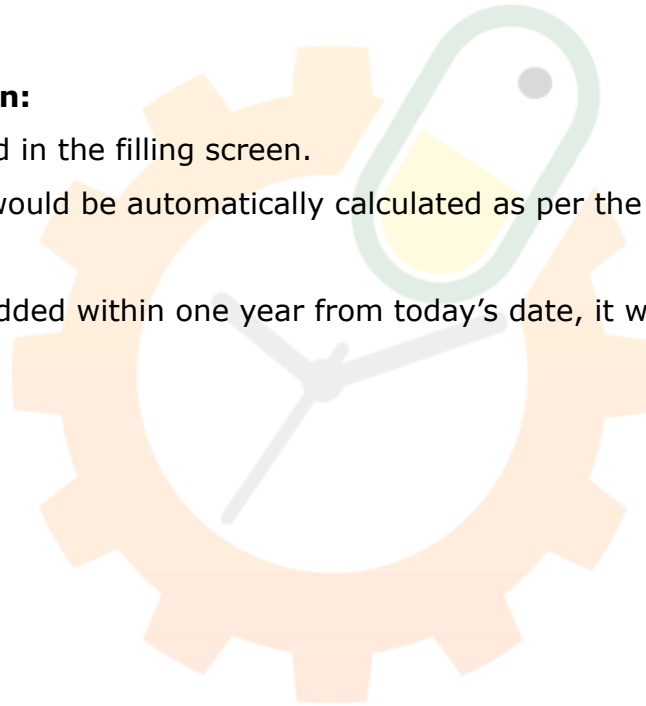

17. Lot & vial Expiration date management in filling and labelling

We have enhanced the filling and labeling workflow to separately track Lot Expiration Date and Vial Expiration Date.

Key Enhancements:

Changes in the Filling Screen:

- We have added a new field in the filling screen.
- The Vial Expiration Date would be automatically calculated as per the date added in the Lot Expiry Date field.
- If the Lot Expiry Date is added within one year from today's date, it will keep the Lot Expiry Date as the Vial Expiration Date.

- Also the field is enabled, so that if a user wants to add another date then he can add another date in the Vial Expiry Date.

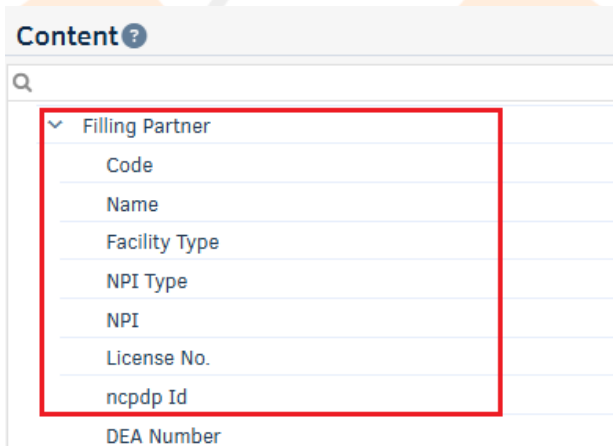

Changes in the Letter Template:

- For the pack label letter template, we have added the same tag: Vial Exp Date.

The screenshot shows a dropdown menu titled 'Content ?' with a search icon. The menu is open, displaying a list of options: 'Filled By Initials', 'Expiry Date', 'Vial Exp Date' (which is highlighted with a red rectangular box), '> Delivery', and '> Patient'.

- If a user uses that tag, it will print the Vial Expiry Date which is added while filling the pack.
- In reference to the sample of the pack label which is shared for the FRx, it would be used for the field: Discard After date.
- Also, we have added a section for the Filling Partner.
- That section will display the details for the store such as name, address and the other details which are being displayed in the store section.

The screenshot shows a dropdown menu titled 'Content ?' with a search icon. The menu is open, displaying a section titled 'Filling Partner' with a dropdown arrow. Below this title, a list of fields is shown, all enclosed within a red rectangular box: 'Code', 'Name', 'Facility Type', 'NPI Type', 'NPI', 'License No.', 'ncdp Id', and 'DEA Number'.

- When the details from the filling section are used in the Pack Label, it will display those details only when the Filling Partner is different from the Source Store.

BRAND IMTIAZ

POISE MICROLINERS

Generic For: Seni Soft Super Underpad

Chew 1 gum until it tingles then park between cheek and gum. When tingle is gone chew again until tingle returns.

NDC# 36000-0398-15

MFG: KIMBERLY-CLARK

Prescriber: SARA JAKA

2 Refills Until 02/08/2028

QTY: 30

Description:

Disp. by: Kahnwald, Jonas

(854)213-6977

CAUTION: Federal law prohibits the transfer of this drug to any person other than the patient for whom it was prescribed.

Discard After: 08/05/2027

Disp: 08/05/2026

Carle Retail Store 151 Farmington Avenue, WATERBURY, CT, 067101739, US

Benefits:

- Enhanced Regulatory Compliance: Automates USP requirements for capping repackaged medication expiration at one year.
- Improved Patient Safety: Ensures "discard dates" are accurately calculated and clearly communicated on labels and correspondence.
- Operational Efficiency: Reduces manual calculation errors by providing automated logic during the filling workflow.

Scope:

In Scope

- Includes modification for the filling screen as well as new field changes for expiry date.
- Filling screen, Label Printing, Letter Templates.

18. Inbox- Document category as per document type

Introduced new Document Categories in the Inbox to improve document organization and integration with Datamart. Documents are automatically routed to the appropriate Patient or Facility folders based on the selected category, making document management simpler and more consistent.

Key Enhancements:

- **Expanded Document Categories**

- Added new document categories for both Patient and Facility documents.
 - New Category for Patients :
 - Deceased Notice, Privacy Notice, Enrollment forms, Assignment of Benefits, Medical Reports, Prior Authorization, ACH/CC Authorization, Fax cover sheet, NSF, CKD patient consent form, Insurance Cards, ADF/enrollment, Proof of delivery, Demographics Information, Medication list, Patient consent Forms, Other
 - New Category for Facility:
 - Facility Worksheet, Clinic License
- Supports commonly used document types such as consent forms, insurance cards, medical reports, enrollment forms, clinic licenses, and facility worksheets.
- Provides better categorization for Inbox documents.
- On Opening the document modal for the patient category system will give the file name and select folder option.
- On opening the document modal for the facility category system will give the File name, facility selection and select folder option.

- **Folder Mapping**

- Patient document categories are automatically saved under the corresponding Patient Documents folder based on the folder selected from the document modal.
- Facility document categories are automatically saved under the default Facility Documents folder based on the facility and folder selected from the document modal.

- **Validations in Inbox:**

- On selection of the facility related category, patient field will get disabled and facility selection field is provided in the document modal
 - Viewing the document modal
 - Select the record and click on process
 - Double click on the record
- On trying to update the mapped category of the message from patient category to facility category system will throw the alert

Confirm

Document is already linked with patient. Would you like to change that to facility and delete the document from the already assigned patient?

- On trying to update the mapped patient in the inbox from patient1 to patient 2 system will throw the validation prompt

Confirm

Document is already linked with patient. Would you like to change the patient and delete the document from the already assigned patient?

Demographic Information	OnBase/Fax2mail	Will Attach to patient profile	patient >> Documents >> Folder : "Demographic Information"
Verbal Rx	FRxCare	N/A	patient >> Documents >> Folder : "Verbal Rx"

Medication List	Email/Fax2mail	Will Attach to patient profile	patient >> Documents >> Folder : "Medication List"
Other	Email/Fax2mail/OnBase	Will Attach to patient profile	patient >> Documents >> Folder : "Other"
Patient Consent Forms	OnBase	Will Attach to patient profile	patient >> Documents >> Folder : "EScript"
New Rx (Part of Category in NL)	OnBase/Fax2mail	Will Attach to patient profile; move to typing directly if patient is recognized	patient >> Documents >> Folder : "New Rx"

- **Remove Unused Category from dropdown:-** Quick Pick up Reminder ,M3P Letter , Patient Inactivated , Request.

Benefits:

- Improves document organization with standardized categories.
- Automatically routes documents to the correct Patient or Facility folders, reducing manual effort.
- Ensures documents are associated with the correct patient or facility, improving accuracy and consistency.
- Simplifies Inbox processing and makes documents easier to locate and manage.

19. Inbox- hold option

Introduced a new "Hold" status in the Inbox to allow users to temporarily pause processing of items that need additional information or clarification. When an item is placed on Hold, a reason must be provided. The item remains on Hold until the required information is available.

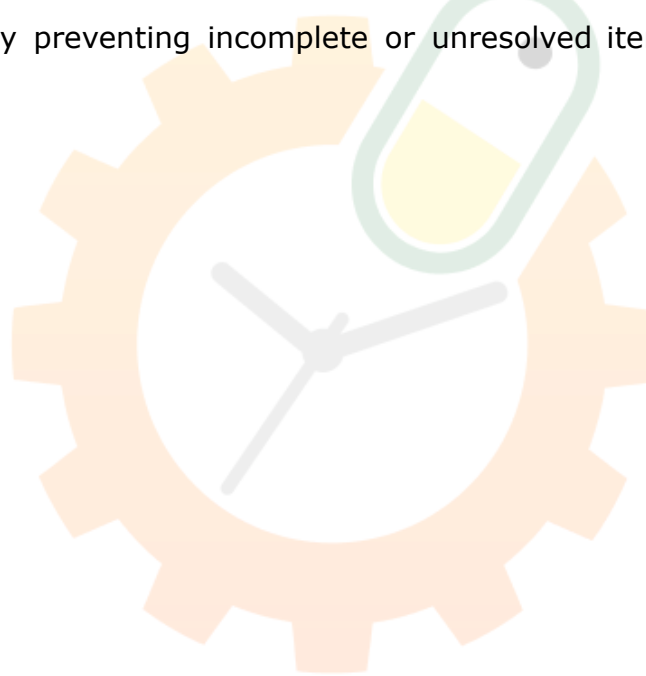

Key Enhancements:

- Added a new "Hold" option to the Inbox status dropdown
- Allows users to temporarily pause processing of Inbox items that require additional clarification or follow-up.
- Uses the existing Notes/Reason field to capture the reason for placing an item on hold.
- Makes the reason field mandatory whenever the Hold status is selected.

The screenshot displays the DosePacker Inbox form. At the top, there is a pagination bar showing '< 1 >' and '1 - 30 of 7777' with a '30' button. Below this are several filter sections: 'From' (Adam, Dency | 12...), 'Patient' (Search Patient -...), 'Status' (Hold), and 'Category*' (Other). Further down are 'Assign To', 'Message Priority' (Urgent), 'Delivery Mode', and 'Requested Document'. The 'Grievances' section has a checkbox and a dropdown. The 'Reason' dropdown is set to 'Account Balance'. A red rectangular box highlights the 'Note*' field, which contains the text 'reason for hold status'. At the bottom left, it says 'Modified By: bhatt, aliya', and at the bottom right is a purple 'Save' button.

Benefits:

- Improves control over Inbox processing by allowing items to be paused without losing track of them.
- Ensures every held item includes a documented reason, improving visibility and accountability.
- Reduces processing errors by preventing incomplete or unresolved items from progressing through the workflow.

20. Inbox: Reply to Emails Option

This enhancement introduces the Reply to Email functionality in the Inbox, allowing users to respond directly to received emails without leaving the application. The feature streamlines email communication by automatically populating the recipient information and providing a dedicated interface for composing and sending replies.

Key Enhancement:

- Added the ability to reply to received emails directly from the Inbox using the Reply Email option available in the Document tab.
- On clicking Reply Email, the system opens the email dialog with a description box to enter the reply message.
- Users can also reply to an email by selecting the record and clicking Reply Email from the More Options menu.
- The To email address is automatically populated with the recipient's email address.
- On clicking Send, the reply email is sent to the selected email conversation.

Key Enhancements

1. Reply to Email

A new **Reply Email** option has been added to enable users to reply to received emails directly from the **Inbox**.

Users can reply to an email by:

- Clicking **Reply Email** from the **Document** tab.
- Selecting an email record from inbox and clicking **Reply Email** from the **More Options** menu.

Behavior:

- On clicking **Reply Email**, the system opens the email dialog with a **Description** field for entering the reply message.
- The **To** email address is automatically populated with the recipient's email address from the selected email conversation.
- On clicking **Send**, the reply email is sent as part of the selected email conversation.

Benefits:

- Enables users to respond to emails directly from the Inbox.
- Eliminates the need to manually enter the recipient's email address.
- Simplifies and streamlines email communication within the application.
- Improves user efficiency by providing multiple access points for replying to emails

21. Inbox: Document attachment to patient received through Email

Enhanced the **Email Inbox** workflow to automatically associate received email documents with the corresponding patient profile. When an incoming email is mapped to a patient, its attachments are automatically saved under the patient's **Documents** section, providing centralized access to patient-related correspondence.

Key Enhancements:

- Added automatic patient document mapping for emails received in the **Inbox**.
- When an incoming email is successfully associated with a patient, all email attachments are automatically stored in the patient's **Documents** section.
- Eliminates the need for manual downloading and uploading of email attachments to the patient profile.
- Ensures patient-related documents received via email are centrally maintained within the patient's record.

The screenshot shows the 'Email Inbox' interface. At the top, there are navigation controls: '< 1 >' and '1 - 30 of 5342 30'. Below this is a form with several fields:

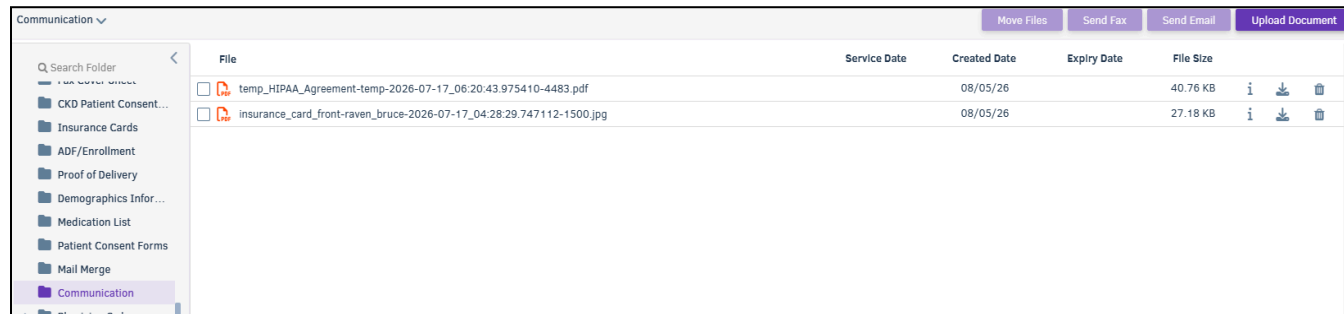

- From:** Patient (dropdown menu)
- Status:** Pending (dropdown menu)
- Category:** New RX (dropdown menu)
- Assign To:** (dropdown menu)
- Message Priority:** (dropdown menu)
- Delivery Mode:** (dropdown menu)
- Requested Document:** (dropdown menu)
- Grievances:** (checkbox)
- Reason:** (dropdown menu)
- Note:** (text area)

On the right side, there is a text block containing a disclaimer: 'The information contained in this transmission is privileged and confidential and/or protects under the law, including the Health Insurance Portability and Accountability Act of 1996, as use of the individual or entity to whom it is addressed. If you are not the intended recipient, printing or copying of this transmission is strictly prohibited and may subject you to criminal error, please contact the sender immediately in a separate email and delete this email and a'. Below this, there is a section titled 'Attachments' with two items:

- insurance_card_front-raven_bruce-2026-07-17_04:28:29.747112-1500.jpg
- temp_HIPAA_Agreement-temp-2026-07-17_06:20:43.975410-4483.pdf

At the bottom right, there is a 'Reply Email' button.

- Based on the category selected the document will be added in that particular folder.
 - Example: P&T approval is selected then that document will get attached to the patient > document > P&T Approval Folder.

- Example: An email containing a referral, prescription, or lab report is received in the **Inbox**. The email is mapped to **Patient John Smith**. The attached documents are automatically added to **John Smith's** → **Patient Profile** → **Documents** section for future reference.

22. Fax Transfer Between Store Locations

Enhanced the **Fax Send** workflow to allow pharmacy staff to forward documents that are received at the wrong store (i.e received from at TN for FL store) to the appropriate store location. Users can now select the destination store from the **Sending Store** field in the Fax Send window and transmit the document directly without requiring external fax handling.

Key Enhancements:

- Enhanced the **Fax Send** window to support transferring documents between pharmacy store locations.
- Allows users to select the appropriate destination store using the **Sending Store** field before sending the fax.
- Enables pharmacy staff to quickly forward documents that were mistakenly received at one location to the correct store.
- Continues to use the existing Fax Send workflow, eliminating the need for manual or external document forwarding.

- Example: A prescription or document intended for the **Florida (FL)** pharmacy is accidentally received by the **Tennessee (TN)** pharmacy.
The TN user can open the **Fax Send** window, select the **Florida** store in the **Sending Store** field, and send the fax directly to the correct location.

23. Account Filter – Display Associated Patients for Guarantor Accounts (Lisa's Point: Item 23)

The **Account Filter** has been enhanced to improve visibility into **patient-guarantor relationships** across the application. A new **Patient (#Chart)** column has been added to the **Account Filter** dropdown. When an account is configured as a guarantor for a patient in **Patient** → **Contacts** → **Guarantor**, the associated patient name is displayed in this column.

		jones, noa - AC44897 (Self)		☒			
01/01/20		jones, nick - AC44898	CMS LOW INCOME	☐			

Key Enhancements:

1. Patient Name Highlight Based on Guarantor Status

The **Patient (#Chart)** column will display the patient name based on the status of the associated guarantor record.

Behaviour:

- If an Active guarantor record exists (the Active checkbox is checked in Patient → Contact → Guarantor), the patient name will be displayed in the default color.
- If an **Inactive** guarantor record exists (the **Active** checkbox is unchecked), the patient name will be displayed in **red**.

Note: If multiple records exist for the same guarantor in the **Patient** → **Contact** → **Guarantor** grid, the system will consider the **latest date range record** to determine whether the patient name is displayed in the default color or red.

2. Account Auto-complete Enhancements

The **Account Auto-complete** search results will be updated with the following changes:

- Add a new **Patient (#Chart)** column to the right of the **Name** column.
- Rename the **Name** column to **Account**.
- Rename the **Phone** column to **Acc. Phone**.
- Rename the **Address** column to **Acc. Address**.

Account	Priority	Dispense Date		
All				
Account	Patient(#chart)	Acc. Phone	Acc. Address	Note
P Homenick, Dana - AC42059	Self (PT34362)		100 Main St, Dallas, TX, 85001	
P jones, nick - AC44898	Self (PT37513)		Ponte de Rialto, Venezia Centro, Ven...	
	jones, noa (PT37512)			

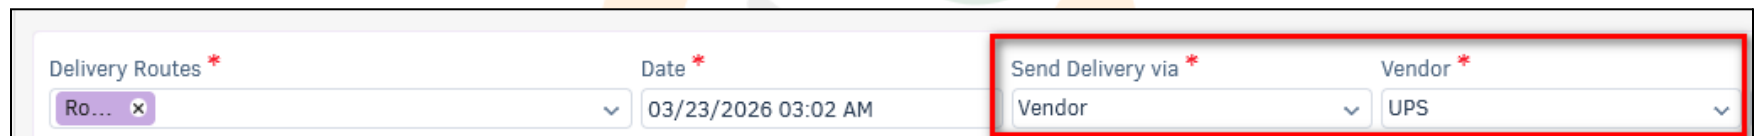

24. UPS Delivery Workflow

Added support for UPS as a delivery partner, enabling users to generate UPS shipments directly from the application. The enhancement includes shipment rate calculation, transit time estimation, delivery address validation, and automatic generation of UPS tracking numbers.

Key Enhancements:

1. Delivery Vendor

- Added UPS as a supported delivery vendor under the Send Delivery Via option.
- Users can select UPS while creating a delivery request.

The screenshot shows a form with several fields. On the left, there is a 'Delivery Routes' field with a dropdown menu showing 'Ro...' and a 'Date' field with the value '03/23/2026 03:02 AM'. On the right, there is a 'Send Delivery via' field with a dropdown menu showing 'Vendor' and a 'Vendor' field with the value 'UPS'. A red rectangular box highlights the 'Send Delivery via' and 'Vendor' fields.

2. Generate Delivery Screen

- Added a new UPS Rate action to calculate available UPS shipping rates.
- Added Time in Transit to estimate the expected delivery time for the selected shipment.
- Introduced four new shipment fields:
 - Weight
 - Length
 - Width
 - Height
- UPS Rate requires all four shipment dimensions (Weight, Length, Width, and Height).
- Time in Transit requires only the Weight field to retrieve the estimated delivery schedule.

- **Note:** For the InHouse delivery, this new action buttons and shipment fields will remain disabled.

Generate Delivery

Delivery Routes: Route 1 Date: 08/06/26 01:30 PM Send Delivery via: Vendor Vendor: UPS

Status: Delivery Ready Sequence: 1

3. Delivery Address Validation

- Added backend delivery address validation before shipment generation.
- The system validates the recipient's Street Address, City, State, and ZIP Code to ensure a valid UPS delivery address.
- Initial address validation support is available for California (CA) and New York (NY).

4. Shipment Generation

- Added support to generate UPS shipments directly from the Generate Delivery screen.
- Upon successful shipment creation, the system retrieves and stores the **UPS Tracking Number** for the delivery.
- Generated tracking information is available for shipment tracking and delivery status updates.

5. Tracking Information

- Added **Tracking Number** display in the following screens:

○ **Queue History:**

6. Scheduled Deliveries → Tote view

- Added Label Recovery to allow users to retrieve and reprint UPS shipping labels when required.
- Added Receipt Recovery to enable users to retrieve and reprint UPS shipment receipts directly from the Tote View.

- This Icon will be visible only for the vendor delivery and In-House delivery will work as it is working now.

The screenshot displays the DosePacker application interface. At the top, there's a header with 'carter, jon...' and 'Facility'. Below this, a sidebar on the left shows 'Route 1' with details like '08/07/26 01:30 PM' and 'carter, jones'. The main area shows 'Route 1 - 08/07/26 01:30 PM' with a 'Ground' status. Below this, there are fields for 'Delivery Routes', 'Data', 'Send Delivery via', 'Vendor', 'Status', 'Store', and 'Sequence'. A table of 'Packs' is shown with columns: Pack ID, Admin Date, Pack Type, Priority, PV2 Status, Filled By, Filled On, and No. of Rx. The table contains one record for 'TOTE271110' with a 'DL0963719' priority. A red box highlights an icon in the 'Admin Date' column of this record. The bottom right shows a 'Generate Delivery' button.

Benefits:

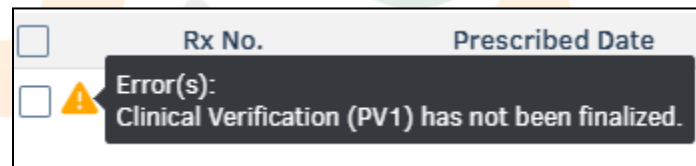

- Enables seamless UPS shipment creation from within the application.
- Improves shipment accuracy through address validation before generation.
- Allows users to compare shipping rates and estimated transit times before creating a shipment.
- Automatically generates and stores UPS tracking numbers, simplifying shipment tracking and follow-up.

25. Rx Transfer without PV1 Completion

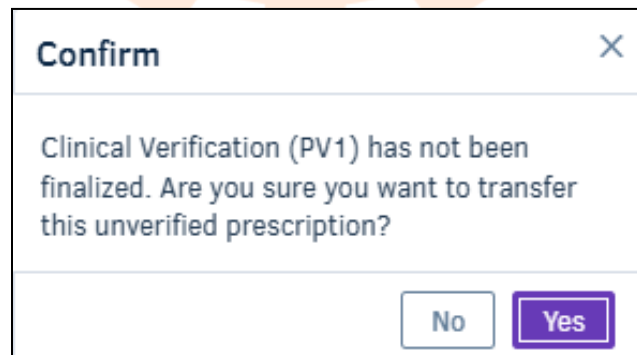

We have updated the system to make it easier to transfer prescriptions, even if Pharmacist Verification (PV1) hasn't been completed yet. We have updated the system to make it easier to transfer prescriptions, even if Pharmacist Verification (PV1) hasn't been completed yet.

Key Enhancements:

- Instead of a hard block, the system will now display a warning when PV1 is pending
- If there is no other hard blocking reason than PV1 then it will give a warning that Clinical Verification (PV1) has not been Finalized.

- Before Transfer also gave "Warning Prompt : Clinical Verification (PV1) has not been finalized. Are you sure you want to transfer this unverified prescription?" to confirm you are aware of this, and the system will let you proceed.

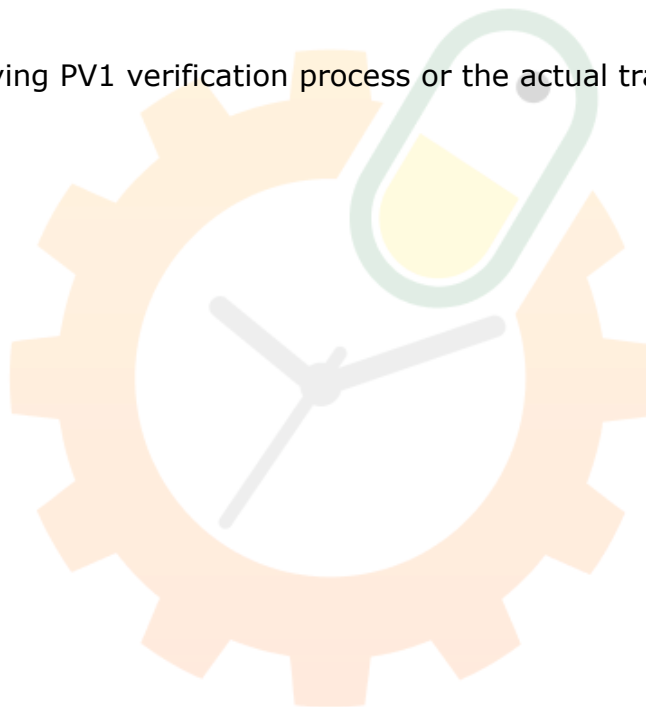

In Scope:

- FRx, LTC, and Retail environments. Modifications to the Rx Transfer validation modal and logging of unverified transfers.

Out of Scope:

- Changes to the underlying PV1 verification process or the actual transfer data mapping logic

26. Rx typing - NDC Display for Prescribed and Fill Drugs.

The **Rx Typing** screen by improving the visibility of **NDCs** for both the **Prescribed Drug** and **Filling Drug**. The enhancement enables users to easily identify the associated NDC directly within the fields and through hover tooltips.

- Displayed the **NDC** for both the **Prescribed Drug** and **Filling Drug** in the Rx Typing screen.
- Added **hover tooltips** to display the complete NDC for improved visibility and usability.
- Improved accessibility of NDC information without requiring users to navigate to additional screens.

The screenshot displays the Rx Typing interface. At the top, there are fields for 'Location' and 'DCA'. Below these are two dropdown menus: 'Drug *' and 'Fill Drug *'. The 'Drug *' dropdown is currently set to 'ZOLE 10 MG TABLET(43598096730)' and the 'Fill Drug *' dropdown is set to 'ARIPIRAZOLE 10 MG TABLET (43...'. Both dropdowns have search, question mark, and save icons to their right. A 'Sig:' field is partially visible below the 'Fill Drug *' dropdown. A red rectangular box highlights a hover tooltip that appears over the 'Fill Drug *' dropdown. The tooltip contains the following information: Drug Name: ARIPIRAZOLE 10 MG TABLET, NDC: 43598096730, RxNorm Code: 349545 (RxNorm Semantic Clinical Drug), MedId Description: aripiprazole 10 mg tablet, RxNorm Description: aripiprazole 10 MG Oral Tablet, Strength: 10 mg, ACQ Cost: 100, and Drug Caution: Reduce or avoid drinking alcohol Call doctor if unusual muscle movements occur Before use, important to read the Medication Guide May make you drowsy or dizzy. Drive with caution Tell doctor your complete medical history Discuss risk vs benefits of use during pregnancy. Below the tooltip, the 'Drug *' dropdown is now set to 'ARIPIRAZOLE 10 MG TABLET(435...x'.

27. Exclude Rejection Codes Filter Enhancement

Enhanced the **Exclude Rejection Codes** filtering logic to exclude claims **only when all rejection codes on the claim match the configured exclusion list**. Claims containing any additional rejection codes outside the exclusion list will continue to be displayed.

Key Enhancements:

- Updated the **Exclude Rejection Codes** filter to evaluate the complete set of rejection codes associated with a claim.
- Claims are excluded **only if all rejection codes** belong to the configured exclusion list.
- Claims containing one or more rejection codes **outside** the exclusion list will remain visible.
- Example:
 - **Configured Filter Exclude Codes:** 75, 50
 - **Claim with Rejection Codes:** 75, 50 → **Excluded**
 - **Claim with Rejection Codes:** 69, 75, 50 → **Displayed**

28. DUR Review and Refill Request Processing

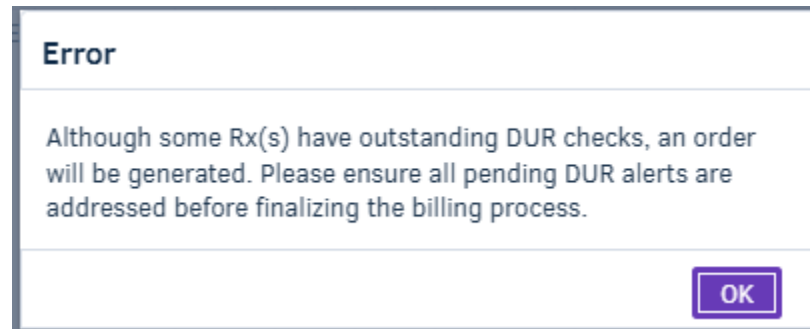

The refill request processing workflow has been enhanced by changing the sequence of queue creation and bill validation. The system now creates the processing queue before evaluating the conditions required for bill creation

Key Enhancements

- Updated the refill request processing flow to create the processing queue before performing bill creation validation.
- Previously, the system evaluated bill creation conditions first and created the queue only after successful validation.
- With the new workflow, the queue is created immediately after processing the refill request, followed by bill creation validation.
- If a Drug Utilization Review (DUR) alert is identified during bill creation:
 - The prescription is reverted to the **PV1** stage.
 - The prescription is routed to the **DUR Review** bucket for clinical review.
 - After the DUR review is completed and saved, the required data is updated, the prescription returns to the **PV1** bucket, and billing can proceed.
- If no DUR alerts are identified, the system proceeds directly with bill creation without reverting the prescription to the **PV1** stage.

Rx Refill Due / Refill Request process modal:

- On selection of the bill checkbox, if any outstanding DUR checks were present for the prescription.

- On hovering the warning icon in the Rx refill due modal system will show the DUR validation if any outstanding DUR checks were present.

Bill ☐	OD	Call	Service D...	Rx No.	Rx ...	AF	Filled Drug
Patie							
					Regular	☐	CELEBREX 100 MG (00025152031)
			08/05/26	930028526	Regular	☐	DICLOFENAC 2% PUMP (51672136)
			08/05/26	930028500*	Regular	☐	DIGOXIN 0.25 MG (60687055101)

Benefits

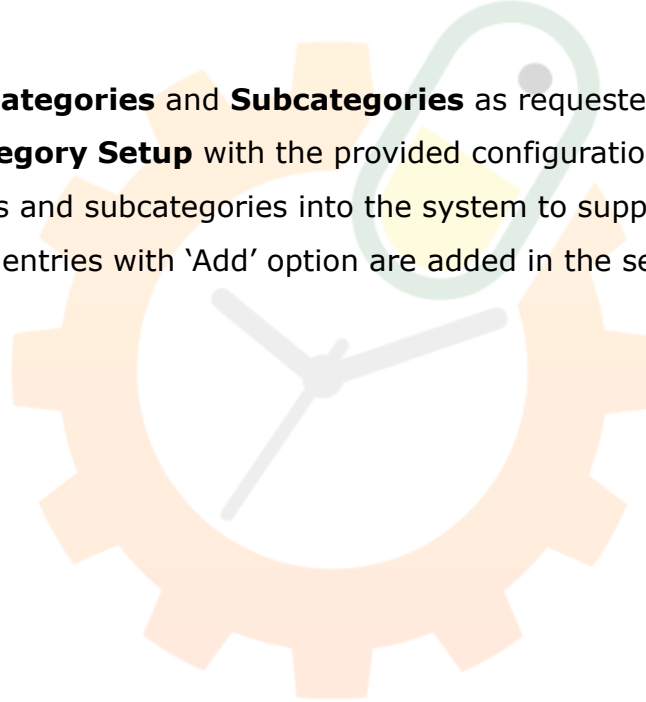

- Ensures the processing queue is created earlier in the workflow for improved prescription tracking.
- Provides a consistent workflow for prescriptions requiring DUR review.
- Improves processing efficiency by establishing queue visibility before bill creation validation.

29. Activity Category Setup Enhancement

Updated the **Activity Category Setup** by adding the newly requested **Activity Categories** and **Subcategories** to support the **Activity Notes to Retain by Category/Subcategory** configuration.

Key Enhancements

- Added the new **Activity Categories** and **Subcategories** as requested by the FRx team.
- Updated the **Activity Category Setup** with the provided configuration entries.
- Loaded the new categories and subcategories into the system to support activity note retention.
- From the below sheet the entries with 'Add' option are added in the setup.
- [Category List](#)

30. MS Entra Integration

Users can now sign in using their Microsoft account through Microsoft Entra integration.

Prerequisite:

- The email address associated with the user's Microsoft account must be configured as the **Username** in the **User List**.

Key Enhancements

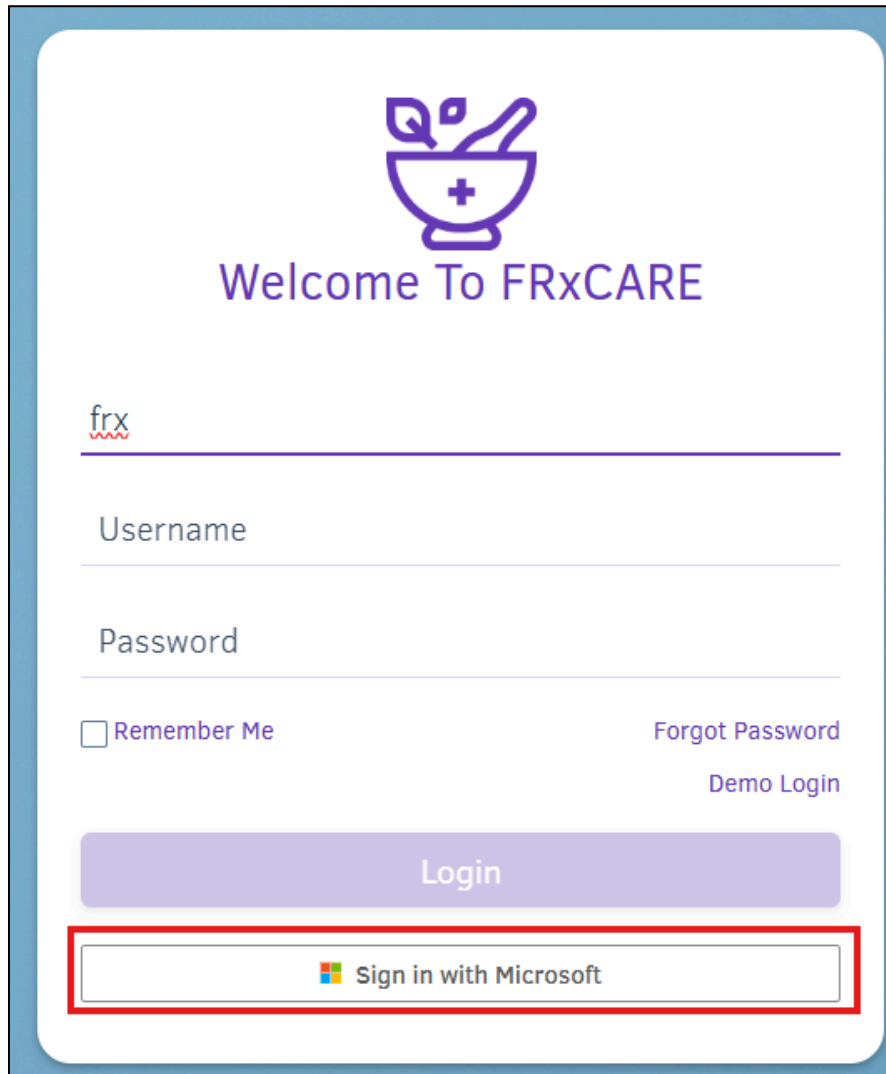

- A **Sign in with Microsoft** option has been added to the login screen below the Login button.
- The Sign in with Microsoft option is enabled only after a Clinic Code is entered.
- To access the portal using Microsoft Sign-In, the email address linked to the Microsoft account must match the Username configured in the User List.

User Configuration:

- Enable the **MS Entra Login** checkbox to designate a user as a Microsoft Entra user.
- Once MS Entra Login is selected, the Password and Confirm Password fields are automatically disabled.
- The Username must be set to the email address associated with the user's Microsoft account.
- After the MS Entra Login setting is saved, the checkbox cannot be unchecked or removed for that user.

User Information

☒ MS Entra Login	☐ External	Employee *	Username *
		Pandya, Shivam	shivam.p@meditab.com
Time Zone	Job Roles	Security Groups	
(UTC-07:00) PST - America/Los Angeles	Pharmacist x		☐ Locked
☐ Dual Monitor			

The image shows a login interface for FRxCARE. At the top, there is a purple icon of a mortar and pestle with a cross. Below it, the text "Welcome To FRxCARE" is displayed in purple. The login form includes a username field with "frx" entered, a password field, a "Remember Me" checkbox, a "Forgot Password" link, and a "Demo Login" link. A purple "Login" button is positioned below the password field. At the bottom, a red-bordered box highlights a "Sign in with Microsoft" button, which features the Microsoft logo.

frx

Password

☐ Remember Me [Forgot Password](#)

[Demo Login](#)

Login

 Sign in with Microsoft

Note : Entra can be used on FRx Env. only so setup can be done there only not in DP environment.

31. Queue: DC action on Prescription

Key Enhancement:

- When a user attempts to discontinue an Rx that is currently assigned to a queue, the system displays a prompt instructing the user to first remove the Rx from the queue before marking it as **Discontinued (DC)**.
- This validation has been introduced to prevent workflow inconsistencies. If an Rx is discontinued while it is still part of a queue, all associated billing data may be reversed. As a result, users working on an active pack for that Rx may lose visibility into its current processing stage.
- To avoid this scenario, the Rx must be removed from the queue before it can be marked as **Discontinued**.

32. Typing: Typist Validations

Enhanced Typing validations to help typists verify critical **patient address and allergy information** during prescription entry.

Key Enhancements

- While Rx Typing, a typist can validate the patient address which is stored in the patient and the one which is received via escript.
- From the Rx Typing if the prescription is received via Escript, and there is mismatch for the patient address in the document which is received and the address which is present in the patient then it will display a red indication along with the address in the escript document.

- A user can check the active allergies from the Patient Bar, and can verify the allergies.
- In case a user wants to update the patient's allergies, he can update it from the Patient Bar → Patient Wally Icon → Demographics → Clinical Information.

Benefits:

- Improves accuracy of patient information during prescription typing.
- Helps prevent address-related dispensing and delivery errors.
- Ensures patient allergies are reviewed and kept up to date.
- Provides clear visual indicators and accessible workflows for typists.

33. Vial Label Changes : Discard date , Remote Fill Address , Caution

We have made some changes to the FRx Pack Label, which we have released in the earlier build. The key points for the changes are listed below:

- We have added the Static Caution value in the pack label template.

Solvera Retail Pharmacy
7400 MacArthur Boulevard, Suite B
OAKLAND, CA 94605
930027744
BRAND IMTIAZ
POISE MICROLINERS
Generic For: Seni Soft Super Underpad
Chew 1 gum until it tingles then park between cheek and gum. When tingle is gone chew again until tingle returns.
NDC# 36000-0398-15 MFG: KIMBERLY-CLARK
Prescriber: SARA JAKA
2 Refills Until 02/08/2028 QTY: 30
Description:
Disp. by: Kahnwald, Jonas

(854)213-6977
CAUTION: Federal law prohibits the transfer of this drug to any person other than the patient for whom it was prescribed.
Discard After: 08/05/2027
Disp: 08/05/2026

Carle Retail Store 151 Farmington Avenue, WATERBURY, CT, 067101739, US

- Drug Caution tag are also added in the pack label, and now it will print the drug caution in the pack label.

Solvera Retail Pharmacy
7400 MacArthur Boulevard, Suite B
OAKLAND, CA 94605
930027719
BRAND IMTIAZ
ARIPIRAZOLE 10 MG TABLET
Generic For: Abilify
TAKE ONE IN THE MORNING AND ONE IN THE NIGHT.
NDC# 60505-2674-08 MFG: APOTEX CORP
Prescriber: SARA JAKA
0 Refills Until 07/01/2028 QTY: 10

Reduce or avoid drinking alcohol Call doctor if unusual muscle movements occur Before use, important to read the Medication Guide May make you drowsy or dizzy. Drive with caution Tell doctor your complete medical history Discuss risk vs benefits of use during pregnancy.

- Also, some changes related to the pack label size are also released in the build.
- Filling partner changes and Vial Expiry changes are also released which is mentioned in the FSD :
Lot & Vial Expiration Date Management in Filling and Labeling.

34. Patient Refund Check Letter – Print and Refund screen Enhancements

The **Refund Tracking** and **Refund Posting** workflows have been enhanced to improve receipt navigation and streamline patient refund communication. Users can now access refund receipts more efficiently and send or print refund letters directly from the **Refund Posting** screen. These enhancements reduce navigation between screens while providing a more consistent and user-friendly experience.

Key Enhancements

1. Refund Tracking Screen

Workflow Store Store Configurations Drug Inbox Retail Workflow Refund Tracking Scheduled Deliveries New Patient Prescription Solvera Retail Pha... 									
Filters List Print Reset Select Criteria Save Criteria Retrieve New Refund									
Receipt No. 	Refund To 	Date 	Refund Amount 	Payment Mode 	Payment Number 	Refund By 	Note	Actions	
REFUND29458	Murphy, Grayson	08/05/26	\$50.00	Check	1021930	Tye, Andrew			
REFUND29457	review, credit	08/05/26	\$17.00	Cash		support			
REFUND29456	james, James	08/05/26	\$2.00	Cash		support			
REFUND29455	james, James	08/05/26	\$1.00	Cash		support			
REFUND29454	review, credit	08/05/26	\$211.25	Cash		support			
REFUND29452	james, James	08/04/26	\$1.00	Cash		support	test		
REFUND29451	Montrose, Javier	08/03/26	\$10.00	Credit Card	1500210096	support

REFUND29438		07/30/26	\$10.00	Check		Tye, Andrew			

- Added support to open the **Refund Posting** screen in a modal window by double-clicking a refund record, allowing users to review and update refund details without leaving the **Refund Tracking** screen.

- Added support to open refund receipts in a separate tab using the **Pencil** icon or middle mouse click. The system prevents duplicate tabs from opening for the same receipt.
- Replaced the existing **Receipt** icon with a new **View Receipt** button while retaining the existing receipt viewing functionality.

2. Refund Posting Screen:

[Close](#)

- Added **Email**, **Fax**, and **Print Letters** actions, allowing users to send emails, send faxes, or print the **Patient Refund Check Letter** directly from the **Refund Posting** screen.
- Automatically attaches the refund receipt when sending emails or faxes, with the option to remove the attachment before sending.
- Email and Fax windows use the existing communication workflow, providing a consistent user experience.

Letter Template Setup

- Added a new system-defined **Patient Refund Check Letter** template under the **Account Refund Receipt** module.
- The template supports customization while remaining protected from deletion to ensure a standard refund communication format across all users.

Benefits:

- Improves navigation and accessibility to refund receipts.
- Reduces the time required to email, fax, or print refund letters.
- Eliminates unnecessary navigation between multiple screens.
- Provides a standardized patient refund letter while allowing organizations to customize the template.
- Improves overall user productivity and workflow efficiency.

35. Clinical Bifurcation Drug Mapping Update

Updated the **Clinical Bifurcation** configuration by adding the required drug mappings based on the drug list provided by the **FRx Team**. This ensures the required drugs are available for Clinical Bifurcation processing

Key Enhancements

- Added the drug list received from the **FRx Team** to the **Clinical Bifurcation** window.
- Configured the required drug mappings to support the Clinical Bifurcation workflow.
- Attaching the list for which the setup is done. The drugs marked in Red are not available in FDB.
- Have updated for FL Pharmacy and TN Pharmacy.

 FRxCare Trapping List

36. Clinical Severity in the Contraindication Check

The Contraindication Check has been enhanced to display the **Clinical Severity** of identified contraindications, enabling users to better assess the significance of clinical alerts during prescription processing.

Key Enhancements

- Added a **Clinical Severity** column to the Contraindication Check screen.
- Clinical severity is now displayed alongside each contraindication alert for improved clinical visibility.
- The following clinical severity values are supported:
 - **Contraindication**
 - **Severe Warning**
 - **Moderate Warning**

Benefits

- Provides clearer visibility into the severity of contraindication alerts.
- Helps pharmacists and clinicians prioritize their clinical review based on alert severity.
- Improves clinical decision-making by presenting severity information directly within the contraindication check.

Drug	Disease	Clinical Severity	Note	RPh Note	P. Status	Pr

37. Same CFI Drug Already Filled on New Prescription to be Shown in Filled Drug Tab

A new **Fill History** tab has been introduced across the prescription workflow to provide users with quick access to previously filled prescriptions for the same Central Fill Inventory (CFI) drug. This enables users to review prior fill details during prescription processing.

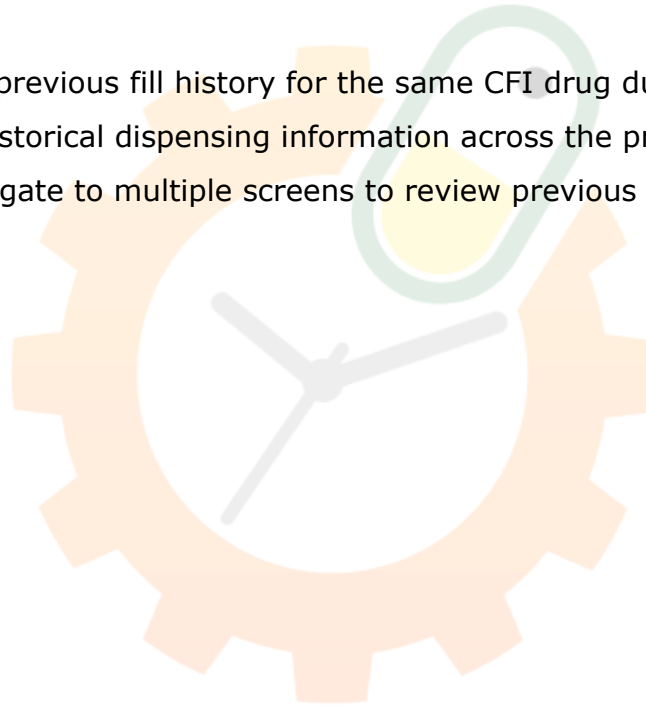

Key Enhancements

- Added a **Fill History** tab across the prescription workflow to display previously filled prescriptions for the same CFI drug.
- The **Fill History** tab is available from the following screens:
 - **Rx Typing** → Fill History
 - **PV1** → Fill History
 - **Fill** → Fill History
 - **PV2** → Fill Hx
- The **Fill History** tab displays the following information for each previously filled prescription:
 - Days Supply (DS)
 - Remaining Refills (RR)
 - Fill Quantity (FQ)
 - Administration From Date
 - Administration To Date
 - Pack #
 - Packing Type

- Filled By
- Filled On

Benefits

- Provides quick access to previous fill history for the same CFI drug during prescription processing.
- Improves visibility into historical dispensing information across the prescription workflow.
- Reduces the need to navigate to multiple screens to review previous fill details.

38. Filtering Through Specific Email Using "From" Value Filter in Inbox

The Inbox filtering capability has been enhanced to allow users to filter emails based on the **From** email address. This enhancement also supports saving the filter criteria as a workflow and extends the same filtering capability to received voicemail records.

Key Enhancements

- Added support for filtering Inbox emails using the **From** email address.
- Users can quickly locate emails received from a specific sender.
- Users can save the filter criteria by creating a workflow setup for repeated use.
- Extended the **From** email filter to support filtering of received voicemail records.

Benefits

- Enables faster identification of emails and voicemails from specific senders.
- Reduces the time required to search through Inbox records.
- Improves productivity by allowing users to save and reuse frequently used filter criteria.
- Provides a consistent filtering experience across both email and voicemail records.

39. Central Filling Enhancements for Accepted / Rejected Flow

The Central Filling acceptance workflow has been enhanced to validate prescriptions with multiple Filling Partner statuses within the same queue. Based on the combination of Filling Partner statuses, the system automatically updates the status of pending or accepted prescriptions to maintain a consistent queue state. Additionally, rejected prescriptions can now be resent for processing only from the Source Store.

Key Enhancements

- Added validation during queue acceptance when multiple Filling Partner statuses exist within the same queue.
- If **Accepted**, **Rejected**, and **Pending** Filling Partner statuses are present in the queue, the system updates the **Accepted** prescriptions to **Rejected**.

Confirm

Some prescriptions in the queue are currently marked as Accepted / Pending. Do you want to change all prescriptions in the queue to Rejected?

No Yes

- If **Rejected** and **Pending** Filling Partner statuses are present in the queue, the system updates the **Pending** prescriptions to **Rejected**.

Confirm

×

Some prescriptions in the queue are currently marked as Pending. Do you want to change all prescriptions in the queue to Rejected?

No

Yes

- If **Accepted** and **Pending** Filling Partner statuses are present in the queue, the system updates the **Pending** prescriptions to **Accepted**.

Confirm

×

Some prescriptions in the queue are currently marked as Pending. Do you want to change all prescriptions in the queue to Accepted?

No

Yes

- Prescriptions with a **Rejected** Filling Partner status can be resent to **Pending** only from the **Source Store** by clicking the **Resend** button available next to the Queue Number.

Benefits

- Ensures consistent Filling Partner status across all prescriptions within a queue.
- Eliminates status inconsistencies when processing queues with multiple prescriptions.
- Improves workflow accuracy by automatically applying the appropriate status based on queue conditions.
- Restricts the resend functionality to the Source Store, ensuring controlled reprocessing of rejected prescriptions.

40. Template: Insurance Not Contracted

A new system-defined **Insurance Not Contracted** email template has been added to support manual communication with dialysis clinics when FreseniusRx is not contracted with a patient's insurance provider.

Users can access this workflow from **Rx Claim** → **More Options** → **Send Email** by selecting the **Insurance Not Contracted** template. The system automatically populates applicable patient, prescription, and employee information into the email. Insurance Provider Name and Insurance Provider Phone Number are populated only when the latest rejected insurance claim contains one of the supported rejection codes (**40, 50, 05, 890, 52, 85, or NN**). For all other rejection codes, the remaining patient, medication, and employee information is still populated, but the insurance-related fields remain blank. Users can review and modify the email subject and body before sending.

Key Enhancements :

- Added a new **Insurance Not Contracted** system-defined email template.
- Integrated the template into the existing **Send Email** option on the **Rx Claim** screen.

The screenshot displays the 'Rx Claim' interface. At the top, there are dropdown menus for 'Patient', 'Bill No', 'Claim #', 'OD', and 'Svc Dt.'. Below these, a patient record is shown for 'patient two, Test (PT37560)' with associated identifiers 'BILL611946' and 'CLAIM578956', a checkmark, and the date '08/03/26'. A 'Status' dropdown is set to 'Print M3P Letter'. A 'Priority' dropdown is set to 'Primary'. A 'Claim Amount' field is present. A 'Send Email' button is highlighted with a red rectangle. Other buttons visible include 'Reject', 'Claim', and 'Print Letters'.

- Automatically populates:
 - Patient Name

- Patient Date of Birth
- Medication Name
- Logged-in Employee Name
- Insurance Provider Name *(only when the latest rejected insurance claim contains a supported rejection code: 40, 50, 05, 890, 52, 85, or NN)*
- Insurance Provider Phone Number *(only when the latest rejected insurance claim contains a supported rejection code: 40, 50, 05, 890, 52, 85, or NN)*
- When the latest rejected insurance claim contains any rejection code other than the supported codes, all applicable patient, prescription, and employee details are populated, while the Insurance Provider Name and Insurance Provider Phone Number fields remain blank.
- Users can review and modify the email subject and body before sending.
- Email sending is a manual action; the system does not automatically generate or send emails.
- The application does not validate or enforce qualifying rejection codes before sending the email. Users are responsible for verifying the applicable rejection code before sending the notification.
- After sending the email, users can view the sent email in **Communication History**.

Note:

- This template is currently accessible only from the Rx Claims screen. In an upcoming update, it will be available across all screens where the Send Email option is available.

Patient: Test patient two

Patient DOB: 12/03/1996

Medication: BACLOFEN 10 MG TABLET

Insurance Provider: AETNA

Insurance Phone: 1-916-518-0015

Hello Clinic Partners,

Currently, FreseniusRx is not contracted with our mutual patient's insurance provider. We have cancelled this order in our system. Please guide the patient in working with their insurance provider to find a convenient pharmacy that is contracted with their insurance. If the patient has already located a contracted pharmacy, please ask them to have the pharmacy call us at the number below to initiate the transfer of the prescriptions.

For additional questions, please call us at 1-800-947-3131.

Thank you.

41. Template: Invalid Patient DOB

A new system-defined **Invalid Patient DOB** email template has been added to support manual communication with dialysis clinics when a claim is rejected with **Rejection Code 7D** for discrepancies in patient's date of birth. Users can access this workflow from **Rx Claim** → **More Options** → **Send Email** by selecting the **Invalid Patient DOB** template. The system automatically populates applicable patient, prescription, and employee information into the email.

Key Enhancements :

- Added a new **Invalid Patient DOB** system-defined email template.
- Integrated the template into the existing **Send Email** option on the **Rx Claim** screen.

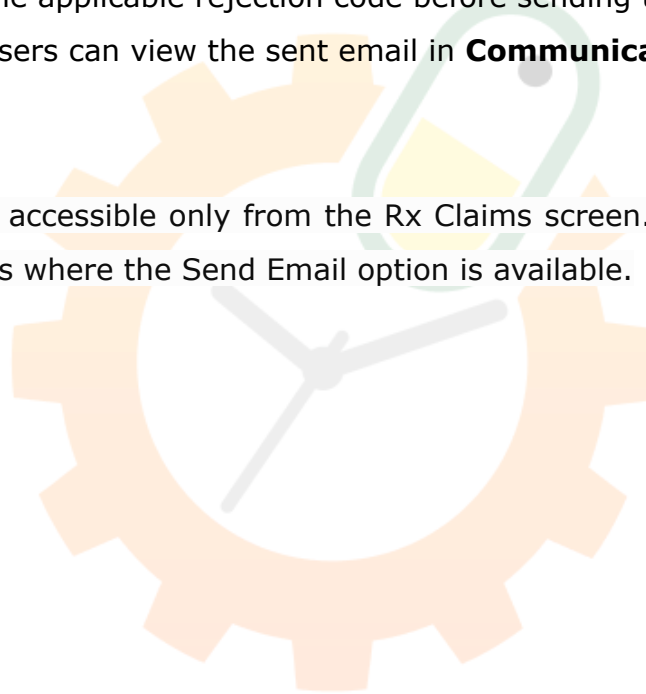

The screenshot displays the 'Rx Claim' interface. At the top, there are dropdown menus for 'Patient', 'Bill No', 'Claim #', 'OD', and 'Svc Dt.'. Below these, a patient record is shown for 'patient two, Test (PT37560)' with 'BILL611946' and 'CLAIM578956'. The 'Status' is 'Rejected' and the 'Priority' is 'Primary'. A 'Send Email' button is highlighted with a red box. Other buttons visible include 'Print M3P Letter', 'Print Letters', and 'Claim'.

- Automatically populates:
 - Patient Name
 - Patient Date of Birth
 - Medication Name
 - Response Date of Birth
 - Logged-in Employee Name

- Users can review and modify the email subject and body before sending.
- Email sending is a manual action; the system does not automatically generate or send emails.
- The application does not validate or enforce **Rejection Code 7D** before sending the email. Users are responsible for verifying the applicable rejection code before sending the notification.
- After sending the email, users can view the sent email in **Communication History**.

Note:

- This template is currently accessible only from the Rx Claims screen. In an upcoming update, it will be available across all screens where the Send Email option is available.

Patient: Test patient two
Patient DOB: 12/03/1996
Medication:BACLOFEN 10 MG TABLET

Hello Clinic Partners,

We need your assistance in confirming that we have the correct date of birth on file for the above mutual patient. The patient's insurance provider has the date of birth as 09/02/1980 which conflicts with what FreseniusRx records are showing 12/03/1996. Please verify the patient's date of birth from your records or have the patient verify their date of birth on their next visit. Once the DOB is confirmed, we will be able to resume billing for the medication.

If you have any questions, please call us at 1-800-947-3131.
Thank you,
Shivam Pandya, Pharmacist

42. Template: Terminated Insurance Coverage

A new system-defined **Terminated Insurance Coverage** email template has been added to support manual communication with dialysis clinics when a claim is rejected with **Rejection Code 68** or **69** for discrepancies in patient's date of birth. Users can access this workflow from **Rx Claim** → **More Options** → **Send Email** by selecting the **Terminated Insurance Coverage** template. The system automatically populates applicable patient, prescription, and employee information into the email.

Key Enhancements :

- Added a new **Terminated Insurance Coverage** system-defined email template.
- Integrated the template into the existing **Send Email** option on the **Rx Claim** screen.

The screenshot displays the 'Rx Claim' interface. At the top, there are dropdown menus for 'Patient', 'Bill No', 'Claim #', 'OD', and 'Svc Dt.'. Below these, a patient record is shown for 'patient two, Test (PT37560)' with 'BILL611946' and 'CLAIM578956'. The 'Status' is 'Rejected' and the 'Priority' is 'Primary'. A 'Send Email' button is highlighted with a red box. Other buttons visible include 'Print M3P Letter', 'Print Letters', and 'Claim'.

- Automatically populates:
 - Patient Name
 - Patient Date of Birth
 - Medication Name
 - Insurance Provider
 - Insurance Phone

- Response Termination Date
- Logged-in Employee Name
- Users can review and modify the email subject and body before sending.
- Email sending is a manual action; the system does not automatically generate or send emails.
- The application does not validate or enforce **Rejection Code 68** or **69** before sending the email. Users are responsible for verifying the applicable rejection code before sending the notification.
- After sending the email, users can view the sent email in **Communication History**. Users can review and modify the email subject and body before sending.

Note:

- This template is currently accessible only from the Rx Claims screen. In an upcoming update, it will be available across all screens where the Send Email option is available.

Hello Clinic Partners,

This notification is for the above mutual patient. We have a pending medication order that we are unable to process due to insurance coverage terminating on 12/31/2023. It may be beneficial for a social worker and or financial coordinator to speak with the patient about applying for alternative coverage. If the patient has obtained new insurance coverage, please provide the new insurance card information. We would appreciate you forwarding any updates to us via fax at 800-952-4488.

For additional questions, please call us at 1800-947-3131.

Thank you.

43. Template: Patient HealthWell Program Update

A new system-defined **Patient HealthWell Program Update** email template has been added to support manual communication with dialysis clinics when a claim is rejected with **Rejection Code 65** for a **Patient HealthWell Plan**. Users can access this workflow from **Rx Claim** → **More Options** → **Send Email** by selecting the **Patient HealthWell Program Update** template. The system automatically populates the patient name, patient date of birth, medication name and logged-in employee name into the email. Users can review and edit the subject and body before sending.

Key Enhancements :

- Added a new **Patient HealthWell Program Update** system-defined email template.
- Integrated the template into the existing **Send Email** option on the **Rx Claim** screen.

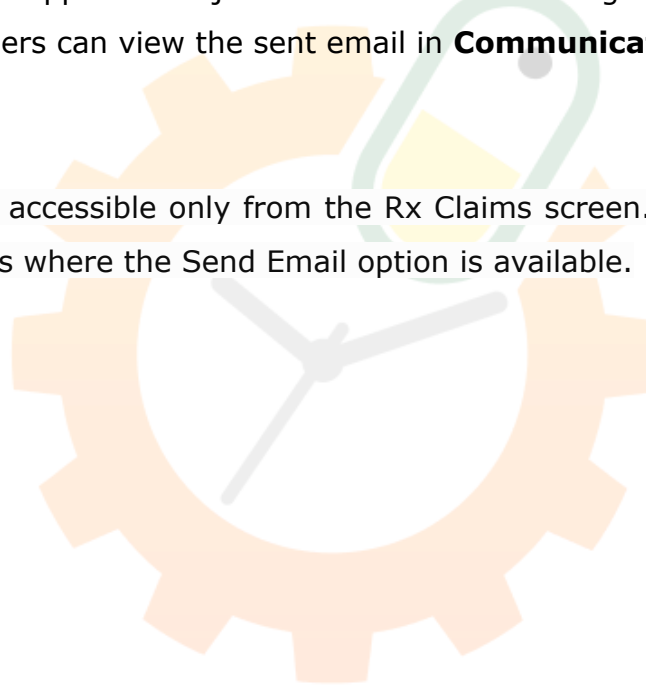

The screenshot displays the 'Rx Claim' interface. At the top, there are dropdown menus for 'Patient', 'Bill No', 'Claim #', 'OD', and 'Svc Dt.'. Patient: Test patient two

Patient DOB: 12/03/1996

Medication: BACLOFEN 10 MG TABLET

Hello Clinic Partners,

This notification is for the above mutual patient. The HealthWell Foundation financial assistance program has been updated. The patient's grant still has funding available, however, it is only accessible through a patient reimbursement form sent directly to Healthwell by the patient. The pharmacy card has been inactivated and the pharmacy is no longer able to bill the Healthwell grant. Please assist the patient by calling HealthWell at 800-675-8416 with any questions. The medication can be processed at the pharmacy level with the primary insurance only and the patient will be contacted regarding the Copay Amount.

If you have any questions, please call us 1-800-947-3131.

Thank you,

William R. Pham, MD

44. Template: Extra Help Application Status

A new system-defined **Extra Help Application Status** email template has been added to support manual communication with dialysis clinics for patients whose latest rejected insurance claim contains **Rejection Code 65 (Patient is Not Covered)**. Users can access this workflow from **Rx Claim** → **More Options** → **Send Email** by selecting the **Extra Help Application Status** template. The system automatically populates the patient name, patient date of birth, and logged-in employee name into the email. Users can review and edit the subject and body before sending.

Key Enhancements:

- Added a new **Extra Help Application Status** system-defined email template.
- Integrated the template into the existing **Send Email** option on the **Rx Claim** screen.

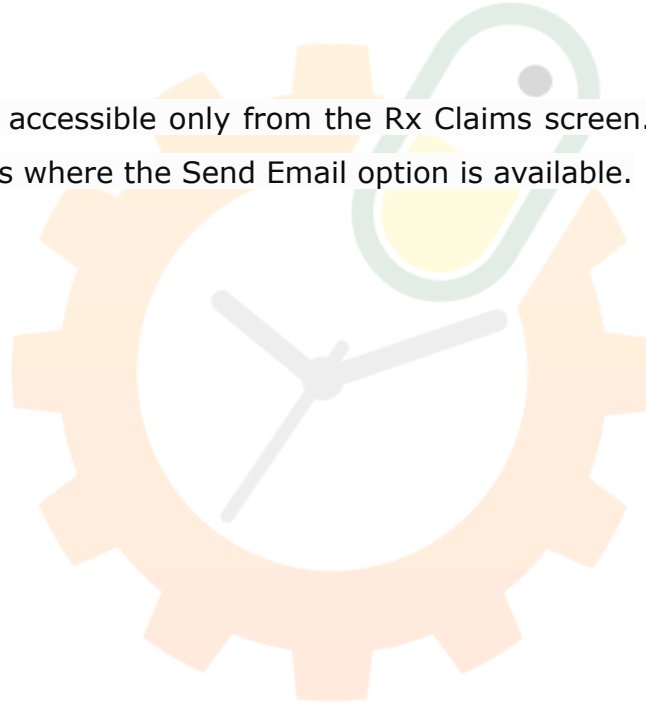

The screenshot displays the 'Rx Claim' interface. At the top, there are dropdown menus for 'Patient', 'Bill No', 'Claim #', 'OD', and 'Svc Dt.'. Below these, a patient record is shown for 'patient two, Test (PT37560)' with 'BILL611946' and 'CLAIM578956'. The 'Status' is 'Rejected' and the 'Priority' is 'Primary'. A 'Send Email' button is highlighted with a red box. A dropdown menu is open, showing 'Print M3P Letter' and 'Print Letters'.

- Automatically populates:
 - Patient Name
 - Patient Date of Birth
 - Logged-in Employee Name
- Users can review and edit the email subject and body before sending.

- Email sending is a manual action; the system does not validate or enforce the presence of **Rejection Code 65** before sending. Users are responsible for verifying the rejection code.
- Users can check the sent email in the communication window.

Note:

Patient: Jadey Roge

Patient DOB: 01/01/2001

Hello Clinic Partners,

We need your assistance in determining FreseniusRx Indigent Waiver program eligibility for the above mutual patient. Please reply with confirmation that the patient has either applied for Extra Help with Medicare in the last 12 months and been denied or you have determined the patient's financials do not meet Extra Help guidelines.

To apply for Extra Help, you may call Social Security toll-free at 1-800-772-1213 (TTY 1-800-325-0778) or submit the application online at <https://www.ssa.gov/benefits/medicare/prescriptionhelp/>

Thank you,

aliya bhatt, Pharmacy Technician

45. Template: Unable to Bill Medication (Binder Medications Only)

A new system-defined **Unable to Bill Medication (Binder Medications Only)** email template has been added to support manual communication with dialysis clinics when a binder medication cannot be billed for a patient with Medicare Part D and no eligible alternative insurance is available. Users can access this workflow from **Rx Claim** → **More Options** → **Send Email** by selecting the **Unable to Bill Medication (Binder Medications Only)** template. The system automatically populates the patient name, patient date of birth, medication name and logged-in employee name into the email. Users can review and edit the subject and body before sending.

Key Enhancements:

- Added a new **Unable to Bill Medication (Binder Medications Only)** system-defined email template.
- Integrated the template into the existing **Send Email** option on the **Rx Claim** screen.

The screenshot displays the 'Rx Claim' interface. At the top, there are dropdown menus for 'Patient', 'Bill No', 'Claim #', 'OD', and 'Svc Dt.'. Below these, a patient record is shown for 'patient two, Test (PT37560)' with 'BILL611946' and 'CLAIM578956'. A date '08/03/26' is also visible. A 'Status' dropdown is open, showing options: 'Print M3P Letter', 'Send Email' (highlighted with a red box), 'Reject', and 'Claim'. Other fields include 'Priority' set to 'Primary' and 'Claim Amount'.

- Automatically populates:
 - Patient Name

- Patient Date of Birth
- Medication Name
- Logged-in Employee Name
- Users can review and edit the email subject and body before sending.
- Email sending is a manual action. The system does not validate binder eligibility, insurance coverage, or rejection codes before sending. Users are responsible for verifying eligibility and insurance coverage.
- Users can check the sent email in the communication window.

Note:

- This template is currently accessible only from the Rx Claims screen. In an upcoming update, it will be available across all screens where the Send Email option is available.

46. Template: E-Mail/Email/Patient Status Update

A new system-defined **E-Mail/Email/Patient Status Update** email template has been added to support manual communication when Clinic sends an email to inform any Rx status (e.g. Rx got dc) , to ack clinic that team have taken required actions after this mail. Users can access this workflow from **Patient Icon** → **Send Email** by selecting the **E-Mail/Email/Patient Status Update** template.

Key Enhancements:

- Added a new **E-Mail/Email/Patient Status Update** system-defined email template.
- Integrated the template into the existing **Send Email** option on the **Patient Icon**.
- Automatically populates:
 - Patient Name
 - Patient Date of Birth
 - Logged-in Employee Name
- Users can review and edit the email subject and body before sending.
- Users can check the sent email in the communication window.

Note:

- This template is currently accessible only from the Patient Icon > Send Email only. In an upcoming update, it will be available across all screens where the Send Email option is available.

47. Template: Disposal Form/Dispose/Destroy

A new system-defined **Disposal Form/Dispose/Destroy** email template has been added to support manual communication when clinics email the team if they want to return medication for disposal/destroy. This is the mail they respond to back to the clinic for this case. Users can access this workflow from **Patient Icon** → **Send Email** by selecting the **Disposal Form/Dispose/Destroy** template.

Key Enhancements:

- Added a new **Disposal Form/Dispose/Destroy** system-defined email template.
- Integrated the template into the existing **Send Email** option on the **Patient Icon**.
- Automatically populates:
 - Patient Name
 - Patient Date of Birth
 - Logged-in Employee Name
- Users can review and edit the email subject and body before sending.
- Users can check the sent email in the communication window.

Note:

- This template is currently accessible only from the Patient Icon > Send Email only. In an upcoming update, it will be available across all screens where the Send Email option is available.

Medication Return Request Process

B **I** **U** **”** **H1** **H2** **Normal** **Normal** **A** **Sans Serif**

Hello,

Regarding Patient (Ab, John), Patient DOB (02/27/2008)- Thank you for your return request. The Clinic FRx Electronic Delivery Log is now the appropriate application to submit for medication returns. The app is located on your desktop and is the same location used to sign in received medications. Select the Undeliverable Package Section and follow the prompts. Please get in touch with your leadership for process questions, log access, and technical issues.

Please let us know if you have any questions.

Thank you,

Jacob, Steve,

48. Template: ECS Enrollment Instructions

A new system-defined **ECS Enrollment Instructions** email template has been added to support manual communication when the Clinic emails a team that patient wants to enroll to the pharmacy after that team revert with steps to enroll on pharmacy with this template. Users can access this workflow from **Patient Icon** → **Send Email** by selecting the **ECS Enrollment Instructions** template.

Key Enhancements:

- Added a new **ECS Enrollment Instructions** system-defined email template.
- Integrated the template into the existing **Send Email** option on the **Patient Icon**.
- Automatically populates:
 - Patient Name
 - Patient Date of Birth
 - Logged-in Employee Name
- Users can review and edit the email subject and body before sending.
- Users can check the sent email in the communication window.

Note:

- This template is currently accessible only from the Patient Icon > Send Email only. In an upcoming update, it will be available across all screens where the Send Email option is available.

Hello,

Regarding Patient Name (Ab, John), Patient DOB (02/27/2008)-

Thank you for reaching out for assistance getting your patient set up with FreseniusRx to service their prescriptions.

There are 3 simple actions needed to ensure the correct enrollment steps are completed:

Step 1: Locate the FRx tab in the patient's profile in CareTeam Hub and select the FRx Easy Button.

Step 2: Go through the form with the patient present to select which services they are interested in receiving from us.

Step 3: Educate the patient that FreseniusRx will review their information and provide a 'Welcome Call' to review these services.

Thank you,

Jacob, Steve,

49. Template: No prescription on file

A new system-defined **No prescription on file** email template has been added to support manual communication when the Clinic may ask for status for any prescriptions' dispensing status or any other status then the team will respond back with this mail. Users can access this workflow from **Patient Icon** → **Send Email** by selecting the **No prescription on file** template.

Key Enhancements:

- Added a new **No prescription on file** system-defined email template.
- Integrated the template into the existing **Send Email** option on the **Patient Icon**.
- Automatically populates:
 - Patient Name
 - Patient Date of Birth
 - Logged-in Employee Name
- Users can review and edit the email subject and body before sending.
- Users can check the sent email in the communication window.

Phosphate Binder Prescription Needed via FERA

B **I** U “ H₁ H₂ ☰ ☷ ⌵ ⌶ ⌷ Normal ⌵ Normal ⌵ **A** Sans Serif ⌵ ☰

Hello,

We currently do not have a prescription on file for Patient Name (Ab, John) and (02/27/2008).

As of January 1, 2025, Medicare requires that phosphate binders be covered under Medicare Medical Benefits (part B). The prescription must first be submitted via the Formulary Exception Request Application (FERA), in eCube Clinicals. If you're unaware of this new process and need assistance, please speak with your Clinic Manager and/or contact Clinical Services at 877-567-6397, clinicalservices@fmc-na.com.

Thank you,

51. Template: Email request for prescription to be held that is not yet received

A new system-defined **Email request for prescription to be held that is not yet received** email template has been added to support when specifically for phosphate binders when clinic asks to put those prescriptions on hold, but team is not seeing that recorded on patient profile then team will revert with this response. Users can access this workflow from **Patient Icon** → **Send Email** by selecting the **Email request for prescription to be held that is not yet received** template.

Key Enhancements:

- Added a new **Email request for prescription to be held that is not yet received** system-defined email template.
- Integrated the template into the existing **Send Email** option on the **Patient Icon**.
- Automatically populates:
 - Patient Name
 - Patient Date of Birth
 - Logged-in Employee Name
- Users can review and edit the email subject and body before sending.
- Users can check the sent email in the communication window.

Prescription Hold Request - Instructions

B I U " H₁ H₂ [List Icon] [List Icon] [List Icon] [List Icon] [List Icon] Normal Normal A [Image Icon] Sans Serif [List Icon]

Dear,

We are reaching out regarding the prescription for [Medication and Dosage] for [Patient Name (Ab, John), Patient DOB(02/27/2008)], which has not yet been received.

As part of our transition to receiving orders from the new eCC order form, we've identified a limitation that prevents us from placing prescriptions on hold in a consistent and timely manner. As a result, we can accommodate hold requests only if they are sent shortly after the prescription is signed by the prescriber and electronically sent to the pharmacy.

To minimize disruption, the following approaches work best:

Call us once the physician has signed the order and it is actively on its way.

If the patient doesn't need the medication yet, please wait to send the prescription closer to the time it's needed.

52. Template: Refill Denial due to A/R Balance

A new system-defined **Refill Denial due to A/R Balance** email template has been added to support specifically for phosphate binders when Team received Refill request through mail or through api for OTC/Vitamins and its falling into refill payment threshold where they cannot dispense until that outstanding balance gets clear. Users can access this workflow from **Patient Icon** → **Send Email** by selecting the **Refill Denial due to A/R Balance** template.

Key Enhancements:

- Added a new **Refill Denial due to A/R Balance** system-defined email template.
- Integrated the template into the existing **Send Email** option on the **Patient Icon**.
- Automatically populates:
 - Patient Name
 - Patient Date of Birth
 - Logged-in Employee Name
- Users can review and edit the email subject and body before sending.
- Users can check the sent email in the communication window.

53. Feature: OCC Override for COB Segment Generation

This enhancement introduces the **OCC (Other Coverage Code) Override** feature to improve the submission of claims to **Secondary onwards Insurance**. It allows users to manually override Coordination of Benefits (COB) information used during claim submission, ensuring the secondary claim is transmitted with the intended values instead of relying solely on the Primary Insurance claim response.

Key Enhancements:

A new **OCC Override** option has been added to the **Billing Modal** for secondary claim submission.

Behavior:

- When the **OCC Override** checkbox is **unchecked**,
 - The system will automatically generate the COB segment using values derived from the **Primary Insurance Claim Response**.
- When submitting a claim to Secondary Insurance and the **OCC Override** checkbox is **enabled**,
 - The system generates the COB (Coordination of Benefits) segment using the values selected in the OCC Override screen.
 - The selected override values are used instead of the values received in the Primary Insurance Claim Response.

- Eliminates dependency on Primary Insurance response values when an override is required.
- Improves claim accuracy for payer-specific and exception scenarios.
- Supports manual correction of COB data before claim submission.

54. Inventory Flow Enhancements:

GRN Quantity/Pack Calculation

The GRN creation process has been enhanced to simplify lot quantity entry during receiving. The **Quantity/Pack** field is now included in the PO mandate and is carried forward to the GRN as **Actual Quantity/Pack**.

- The **Actual Quantity/Pack** value is automatically populated from the corresponding PO line when creating a GRN.

A	B	C	D	E	F	G	H	I	J	K	L	M	N
Order Date	Site	PO Number	Line	NDC	UPC	Drug Description	Order Qty	Package P	Package u	Vendor Account No	Estimated Delivery D	Quantity Per Pack

7/27/2026	7776655	PO0s005	26	832102500		BACLOFEN 20MG TABLET	300	20	3	006906614D	7/30/2026	100	
7/27/2026	7776655	PO0s005	27	48102000735		BACITRACIN 500 UNIT/GM OPHTHALMIC OINTMENT	400	20	20	006906614D	7/31/2026	20	
7/27/2026	7776655	PO0s005	28	38779041905		CAFFEINE POWDER	300	20	6	006906614D	8/1/2026	50	
7/27/2026	7776655	PO0s005	29	68001066504		DASATINIB 140 MG TABLET	300	20	6	006906614D	8/2/2026	50	
7/27/2026	7776655	PO0s005	30	59762505001		GABAPENTIN 250 MG/5 ML SOLN	940	15	2	006906614D	8/3/2026	470	

- The user is no longer required to manually calculate and enter the lot quantity for every received bottle.
- The user only needs to enter the number of bottles received in the **Pack Received** field.
- The system automatically calculates the **Lot Quantity** based on the Actual Quantity/Pack and Pack Received values.

Create GRN

PO Number: PO123 GRN Number: GRN00000127 Status:

NDC: Lot Number: Expiration Date:

NDC	UPC	Drug	Ordered Pack	Ordered Qua...	Price/Pack	Actual Cost/Pack	Actual Quantity/Pack	Received Qu...	Discarded Q...	Pack Received	Lot Number	Expiration Date	Lot Quantity	Purchase Cost		
59148000913		ABILIFY 15 MG TABLET	6	300	20	20	50	50		1	Lot6734	12/31/26	50	20		

Lot Quantity = Actual Quantity/Pack × Pack Received

For example, if the PO specifies **50 units per pack** and the user receives **2 packs**, the system will automatically calculate the Lot Quantity as **100**.

The **Actual Quantity/Pack** field remains editable in the GRN to accommodate cases where the physical pack size received differs from the quantity specified in the PO. If the user updates the Actual Quantity/Pack value, the system recalculates the Lot Quantity accordingly.

This enhancement reduces manual data entry during receiving while providing flexibility to accurately capture variations in the physical inventory received.

Direct Access to Drug Master from GRN

The **NDC** displayed in the GRN is now available as a hyperlink, allowing users to directly navigate to the corresponding **Drug Master** record.

By selecting the NDC, users can open the associated Drug Master details to **review or update drug information** when required, without having to leave the GRN and manually search for the NDC in the Drug Master.

Cycle Count Completion

A new **Cycle Count Completion** adjustment type has been introduced to support inventory reconciliation during cycle counts, including cases where the physical inventory matches the quantity currently recorded in the system.

- Users can record the **current on-hand quantity** for a specific lot after completing a physical cycle count.

Drug Adjustment

Scan:

Adjustment Date	Drug *	Drug On Hand Qty.	Adjustment Type *	Lot Number *	Ex
08/05/26	NITROGLYCERIN 0.4 MG TABLET SL (712...	30280	Cycle Count Completion Drug Damaged Drug Destroyed Drug Donation Drug Expired Drug Recall Return To Vendor Slow-Moving Drug	Adjustment Type is required	

- The entered quantity is compared with the system's current lot quantity:
 - If the counted quantity is **greater** than the system quantity, the system increases the lot quantity accordingly.
 - If the counted quantity is **less** than the system quantity, the system decreases the lot quantity accordingly.
 - If the counted quantity is **0**, the lot quantity is updated to zero.
 - If the counted quantity is **the same as the system quantity**, no inventory quantity change is required, but the cycle count completion is still recorded as an inventory transaction.

- The system therefore allows a cycle count to be completed and documented **even when there is no quantity adjustment**.
- Each Cycle Count Completion is recorded in **Inventory Detail** with the corresponding transaction information, providing an audit trail of completed cycle counts and any resulting inventory changes.

Order Details in Inventory Detail

A new **Order** section has been added to the **Inventory Detail** screen to provide a consolidated view of purchase orders associated with the selected NDC.

The Order section displays the relevant PO-level information, including:

- Ordered Date
- PO#
- Wholesaler
- Ordered Pack
- Ordered Quantity
- Received Qty
- On Order Balance
- Ordered Price/Pack
- Total Price

Inventory Detail

X

NDC: 71205048225

Strength: 0.4 mg

Drug: NITROGLYCERIN 0.4 MG TABLET SL

Pack Size: 25 x 1

Quantity on Hand: 30250

Manufacturer: PROFICIENT RX L

Schedule: 0

AllOrderPurchaseDispenseAdjustment

Ordered Date	PO#	Wholesaler	Ordered Pack	Ordered Quantity	Received Qty	On Order Balance	Ordered Price/Pack	Total Price
07/27/26	PO000322	Amerisource Bergen	6	600	600	0	20	120
07/27/26	PO000321	Amerisource Bergen	6	600	0	600	20	120
07/21/26	PO-150021-260721	SmartSource	1	30000	30000	0	2	2

Users can now view all POs corresponding to an NDC along with the quantities ordered, quantities received, outstanding **On Order Balance**, and associated pricing. This provides better visibility into the purchasing history and outstanding quantities for each NDC directly from the Inventory Detail screen.

Security Rights for Inventory

Security rights have been introduced for the **Inventory Purchase** and **Inventory Tracking** screens to provide controlled access based on user permissions.

The available permissions include:

- **Inventory Purchase Order**
 - View
 - Delete
 - Create GRN
 - Upload PO
- **Inventory Tracking**
 - View
 - Drug Adjustment

▼		☒ View	☒ Create	☒ Update	☒ Delete
▼	Inventory	☒ View			☒ Delete
☒ Select All	Inventory Purchase Order	☒ View			☒ Delete
		☒ Create GRN	☒ Upload PO		
☒ Select All	Inventory Tracking	☒ View			
		☒ Drug Adjustment			

These permissions allow administrators to control which users can access inventory functions and perform specific actions such as uploading POs, creating GRNs, and making inventory adjustments.

55. Inventory : Central fill price consideration Flow

The Central Fill workflow has been enhanced to support **filling partner-specific inventory and pricing** throughout the prescription filling process. This allows the system to determine the appropriate Fill Drug, applicable pricing, and inventory source based on the filling partner selected for the prescription.

Filling Partner-Based Inventory and Pricing

Prescriptions are entered through an **internal/source store** and, based on the configured **Fill & Ship Criteria**, are assigned to an appropriate filling partner. The selected filling partner can be either an **internal filling partner** or an **external filling partner**.

Once the filling partner is determined, the system uses the applicable inventory and pricing configuration for that partner to determine how the prescription should be filled.

Internal Filling Partner

When an **internal filling partner** is selected, the system uses the inventory maintained for that specific filling partner to determine the appropriate Fill Drug.

- The system evaluates the available inventory for the selected filling partner.
- Where multiple eligible lots are available, **FEFO logic** is applied to determine the appropriate lot for dispensing.

- Once the prescription is filled, the corresponding quantity is **deducted from the selected filling partner's inventory**.
- Pricing is determined based on the **Acquisition Cost / AWP** configured in Drug Master for that specific filling partner store.

This ensures that the prescription is filled against the inventory of the actual internal pharmacy responsible for the fill, rather than the source store where the prescription was originally entered.

External Filling Partner

Central Fill also supports external filling partners such as **HealthDyne and McKesson**.

Since external partner inventory is not maintained as physical inventory within the system, the system uses the **Consigned NDC** configuration to determine the available Fill Drug and applicable pricing.

The Consigned NDC screen allows users to maintain the NDCs supported by each external filling partner along with their corresponding pricing. Users can **add new NDCs or update existing NDC and pricing information** as required.

Add new row

When an external filling partner is selected:

- The system identifies the applicable Fill Drug from the NDCs maintained for that partner.
- The corresponding price is retrieved from the partner's **Consigned NDC** configuration.
- No physical inventory deduction is performed against the internal inventory records for the external partner.

This provides a controlled mechanism for representing the products and pricing available through external filling partners without treating their inventory as internally managed stock.

Filling Partner Change During Rx Typing

- The workflow also supports situations where the **Filling Partner is manually changed during Rx Typing**.

- When the filling partner is changed, the system reevaluates the Fill Drug and applicable pricing based on the newly selected partner.
- For an **internal filling partner**, the system evaluates the inventory available at that partner and applies **FEFO** logic to determine the Fill Drug/lot. The applicable pricing is retrieved from the Drug Master configuration for that filling partner.
- For an **external filling partner**, the system uses the partner's **Consigned NDC** configuration to determine the applicable Fill Drug and retrieves the corresponding price maintained for that partner.
- As a result, changing the Filling Partner ensures that the **Fill Drug, inventory source, and pricing are aligned with the newly selected partner**, rather than continuing to use the configuration of the previously selected partner.

Overall Benefit

These enhancements establish a partner-specific approach to Central Fill inventory management, ensuring that:

- **Internal fills** use the selected partner's inventory and FEFO logic.
- **Internal pricing** is based on the selected partner's Drug Master configuration.
- **External fills** use the partner-specific Consigned NDC configuration.
- **External pricing** is maintained and retrieved through the Consigned NDC setup.
- Changes to the Filling Partner during Rx Typing automatically result in the applicable **Fill Drug and pricing being reevaluated**.

This provides greater consistency between the selected filling partner, the inventory or NDC availability used for the fill, and the pricing applied to the prescription.
