39. Sig description to be mandatory on prescription.....	133
40. Inventory Flow Enhancements:.....	135
41. Removed Hold Validation When Adding Insurance.....	139

Enhancement Overview

1. Internal plan - Restriction to bill to other Medications

The Drug Setup enhancement introduces the ability to configure drug-level exclusions for specific insurance plans. This prevents restricted medications from being billed to unauthorized or internal insurance plans and automatically routes prescriptions to **Insurance Needed** when no valid billing option is available.

Key Enhancements:

- Added **Exclude CFI** and **Exclude NDC** configuration fields to the Drug/Insurance Setup.

Store *	Drug/CFI	NDC	Exclude CFI	Exclude NDC
(29466) Solvera Retail Pharmacy	DIGOXIN 125 MCG TABLET			
(29466) Solvera Retail Pharmacy	CINACALCET HCL 30 MG TABLET			
(29466) Solvera Retail Pharmacy	GABAPENTIN 800 MG TABLET			
(29466) Solvera Retail Pharmacy	HALOPERIDOL 10 MG TABLET			

- Supports exclusions at both:
 - CFI level** - On adding CFI it will include all CFI of the same drug.
 - NDC (Specific Drug) level** - On adding specific NDC it will exclude the specific NDC of that CFI.
- Added **All** option in the Exclude CFI field to apply the restriction across all drugs for the selected insurance plan.

Exclude CFI	Exclude NDC	Reason *
All		

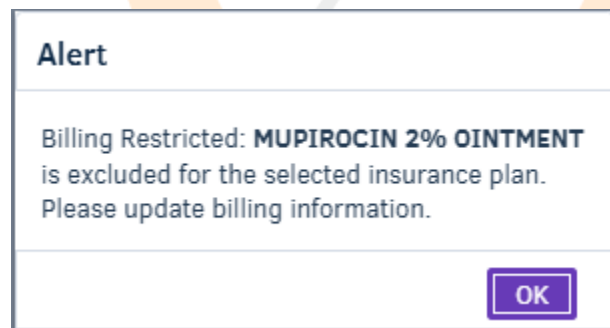

- When **Exclude CFI = All** is selected, all drugs will be restricted for that insurance plan **except drugs/CFIs specifically configured in the Include field**.
 - **Example:** If **GABAPENTIN** is included and **All** is selected under Exclude CFI, GABAPENTIN can still be billed to that insurance, while all other drugs remain excluded.
- The **Exclude NDC** dropdown dynamically filters NDCs based on the selected Exclude CFI.
- When only Exclude entries are added at that time it will not allow the user to select the P&T checkbox.
- Drugs/CFIs and NDCs configured in the **Include** fields are not considered for exclusion.
- Added validation requiring at least one of **Drug/CFI, NDC, Exclude CFI, or Exclude NDC** to be configured before saving.

466) Solvera Retail Pharmacy

At least one of Drug/CFI, NDC, Exclude CFI or Exclude NDC is required

- Prevents users from selecting an excluded insurance plan for billing when the prescription matches the configured exclusion.
- Displays the following message when billing is restricted:
 - "Billing Restricted: This drug is excluded for the selected insurance plan. Please update billing information."

- Automatically moves the prescription to **Insurance Needed** when the only available insurance is excluded for the drug.
- Users can manually unhold the prescription.

Followup ...

☒ Hold ☐ Error

Hold Date *: 08/12/26 To ...

Hold Reason *: Insurance Need

Hold Note: Billing Restricted: This drug is excluded for the available insurance plan.

Other Details

Summary Section

Created By: Bhatia, Megha on 08/12/26 05:06 AM

Last refill Approved on 08/12/26 by 1630IELD, Surgeon

IN Hold

- Applies the same exclusion validation when an excluded insurance is selected from the **Bill** screen, consistent with the validation in **Rx Typing**.

Details

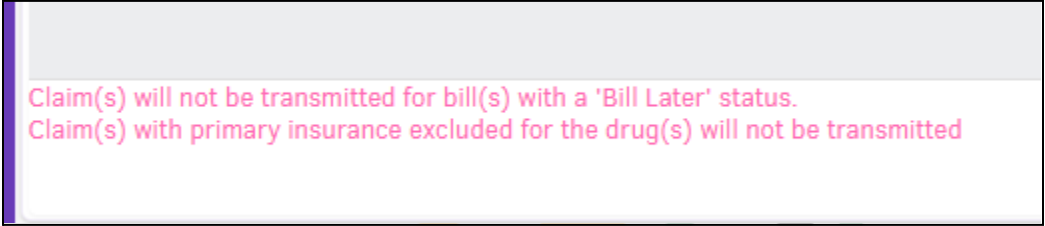

Alert

Billing Restricted: **MUPIROCIN 2% OINTMENT** is excluded for the selected insurance plan. Please update billing information.

OK

AWP Cost: \$163.64

- In **Rx Claims**, when a single excluded Rx is selected, the system displays the billing restriction validation.
 - Have added a note for the same in the Rx Claims window.

Claim(s) will not be transmitted for bill(s) with a 'Bill Later' status.
Claim(s) with primary insurance excluded for the drug(s) will not be transmitted

- When multiple Rxs are selected in **Rx Claims**, the system skips the Rxs affected by the exclusion rule and proceeds with transmission of the remaining eligible Rxs.

Benefits:

- Prevents restricted medications from being incorrectly billed to internal or unauthorized insurance plans.
- Reduces claim rejections and billing corrections.
- Improves billing accuracy through automated drug and insurance validation.
- Minimizes manual intervention by automatically routing prescriptions requiring a valid insurance option.

2. Queue Level Filling Partner Changes

We have implemented the ability to **change the Filling Partner at the Queue level**. Users can now update the Filling Partner for eligible queues, and the system will automatically apply the appropriate pricing based on the newly selected Filling Partner.

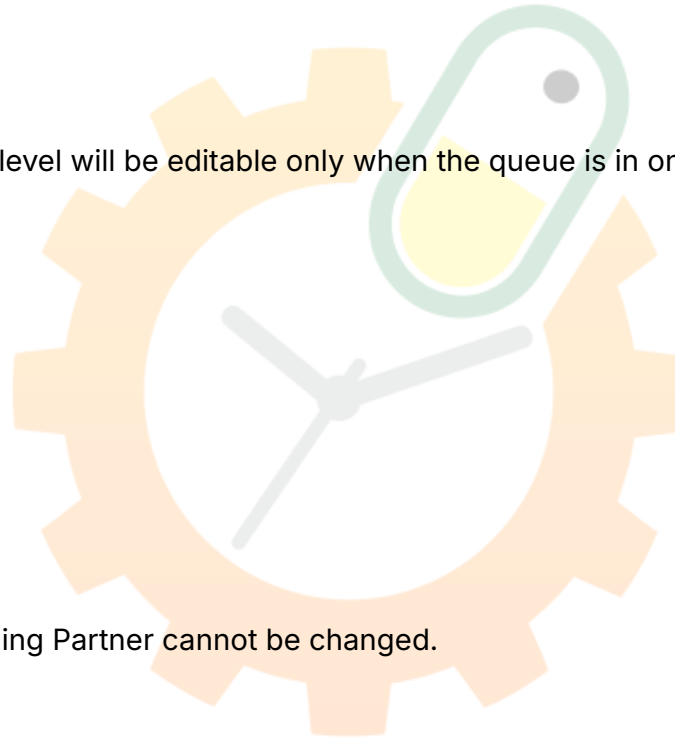

Key Enhancements:

Filling Partner Eligibility

The **Filling Partner** field at the Queue level will be editable only when the queue is in one of the following statuses:

- NOTBILLED
- INERROR
- BILLINGPENDING
- CREDITREVIEW
- QueueCancelled
- QueueRejected
- QueueInvalidResponse
- NOTFILLED

For queues in any other status, the Filling Partner cannot be changed.

< 1/4 >

Rebilling and Pricing Update:

When the Filling Partner is changed for an eligible queue:

- All Rx billing associated with the queue will be **reversed and deleted**.
- The Rxs will then be **re-billed**(new bill creation) using the pricing applicable to the newly selected Filling Partner.
- The updated pricing will be based on the Drug pricing configuration of the selected Filling Partner.

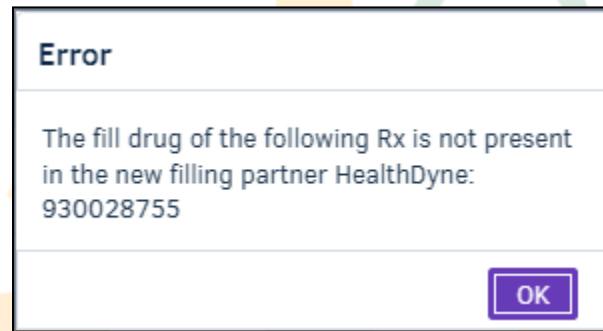

Example:

If the Filling Partner is changed from Filling Partner 1 to Filling Partner 2, all applicable Rxs will be reversed, deleted and re-billed using the pricing configured for Filling Partner 2.

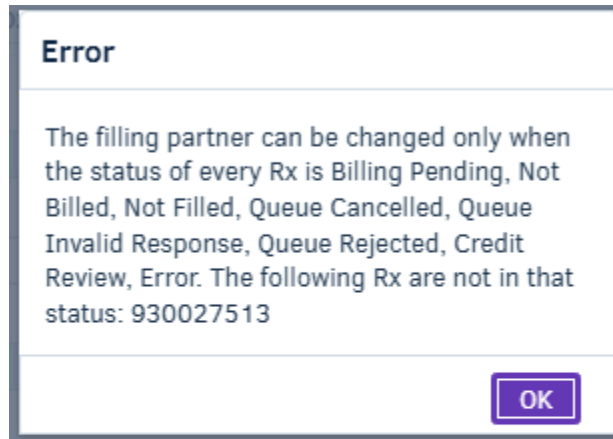

Rx Availability Validation:

Before changing the Filling Partner, the system will validate whether all Rx's in the queue are available at the newly selected Filling Partner.

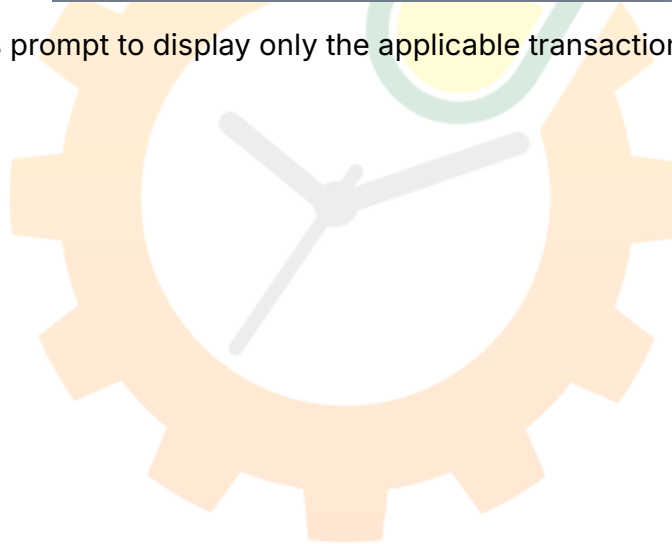

If any Rx is not available with the selected Filling Partner, the system will display a prompt informing the user that the Filling Partner cannot be changed.

When the queue status is other than the NOTBILLED,INERROR ,BILLINGPENDING,CREDITREVIEW,QueueCancelled ,QueueRejected,QueueInvalidResponse,NOTFILLED and user tries to change the filling partner users will be validated.

Note: We are updating the text for this prompt to display only the applicable transaction statuses. This change will be released in the next build.

3. Central Fill Pricing Changes

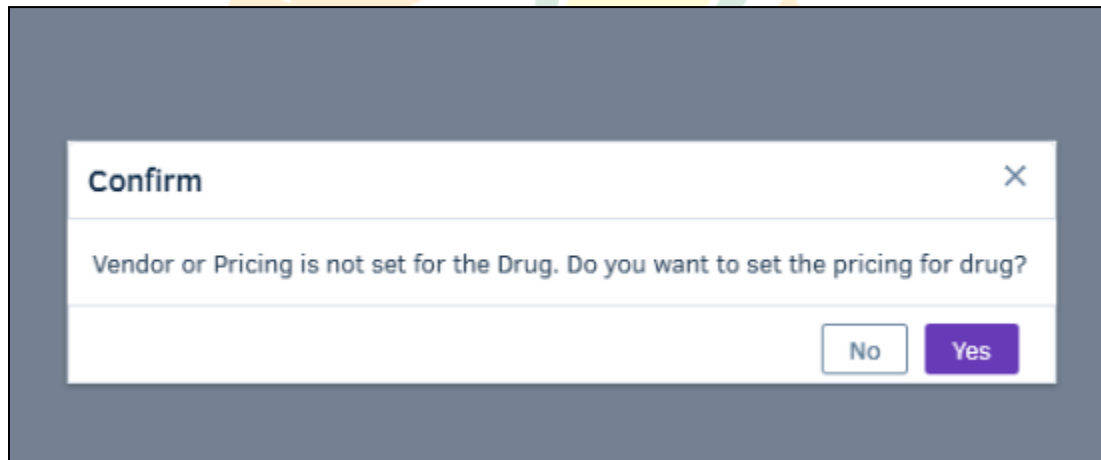

We have implemented the Pricing Required Prompt Behaviour where If price is not set in External store. Also implemented F4 behaviour changed where it redirects the Drug tab according to the filling partner.

Key Enhancement:

Central Fill Pricing Prompt

When saving a prescription for a drug without a set price, selecting "Yes" on the pricing prompt now follows this logic:

- If Filling Partner is not an External Store: Redirects to the standard Drug Setup.

[Add new row](#)

4. Central Fill Transmission Conditions

We have implemented new validation conditions for **Central Filling Transmission** to prevent a queue from being sent to the Central Filling partner when any blocking condition exists.

Key Enhancement:

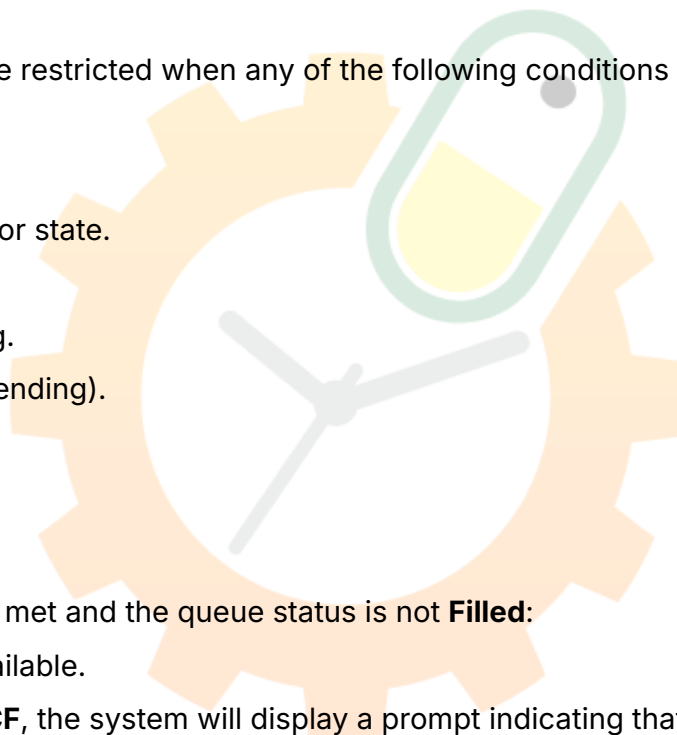

The **Send to CF** Icon action will now be restricted when any of the following conditions are met:

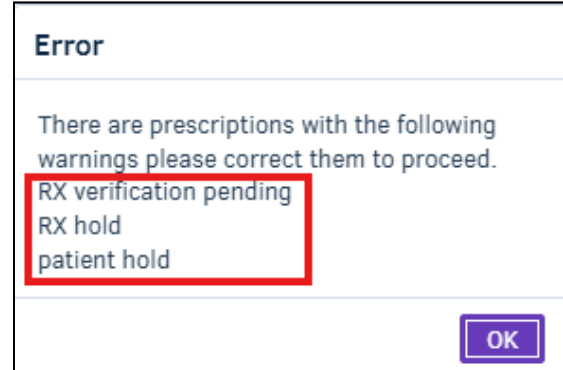

- The patient is on hold.
- Any Rx in the queue is on hold.
- Any Rx in the queue is in an error state.
- Any Rx PV1 is pending.
- Any Rx P&T approval is pending.
- Any Rx bill is rejected (Billing Pending).
- Any Rx in the queue is on DC.

Send to CF Behavior

When any of the above conditions are met and the queue status is not **Filled**:

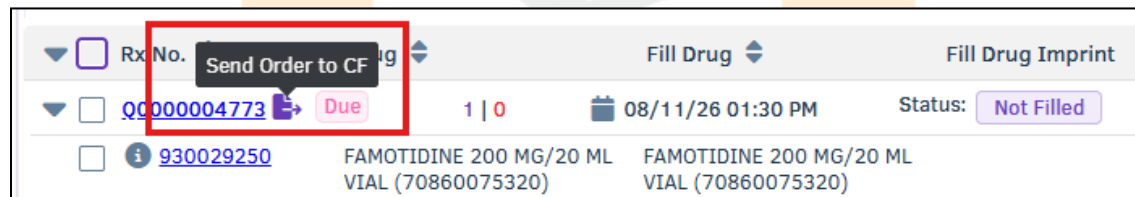

- The **Send to CF** icon will be available.
- When the user clicks **Send to CF**, the system will display a prompt indicating that the queue cannot be sent because one or more required conditions are still pending.
- The queue will not be transmitted until all blocking conditions have been resolved.

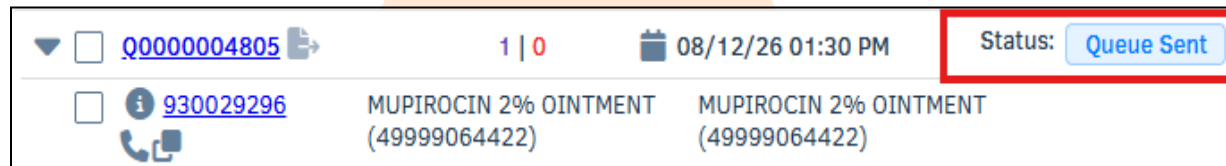

Manual Transmission

Once all blocking conditions are cleared, the user can manually send the queue to the Central Filling partner using the **Send to CF** button.

After successful transmission, the queue status will be updated to **Queue Sent**.

5. Auto Transmit Copay to Next Insurance- Hierarchy Rules

The **Auto Transmit Copay** enhancement introduces defined insurance hierarchy rules to determine the appropriate downstream insurance plan for automatic copay transmission. The system evaluates eligible insurance plans based on the patient's primary insurance plan type, configured insurance priority, and applicable Internal Plan exclusions.

The automatic copay transmission will occur only when the Billing → Auto Transmit Copay to Next Insurance store configuration is enabled.

Key Enhancements:

- Implemented defined insurance hierarchy rules for **Auto Transmit Copay** based on the patient's primary insurance plan type.
- The system evaluates eligible downstream insurance plans based on the patient's primary insurance plan type.
- When multiple plans belong to the same insurance category, the system follows the order configured in the patient's Insurance Profile (Secondary → Tertiary → Quaternary).
- **Defined insurance plan precedence ensures** that copay is transmitted to the appropriate downstream insurance plan.
- Internal/system plans are excluded from automatic copay transmission where applicable.
- **Important:** These hierarchy rules apply only to **Auto Transmit Copay**. Manual copay transmission continues to follow the insurance priority configured in **Patient Demographics → Insurance**.
- The Auto transmission to next insurance happens based on the store configuration: Billing > Auto Transmit copay to next insurance.

Auto-Transmit Copay to Next Insurance: ☒ Upto: Other

- **Downstream Insurance Hierarchy and Excluded Insurance Plans:**

The system automatically excludes insurance types that are not eligible for downstream copay transmission based on the primary insurance and evaluates downstream insurance plans in the following order:

Primary Insurance	Insurance Plans Not Considered	Downstream Insurance Plan
Medicare Part D	Medicare Part A, Medicare Part B	Commercial → Tricare → Medicaid → FAP → IWP → M3P
Medicare Part B	Medicare Part A, Medicare Part D, M3P, FAP, IWP	Commercial → Tricare → Medicaid
Commercial	Medicare Part A, Medicare Part B	Commercial → Medicare Part D → Tricare → Medicaid → FAP → IWP → M3P
Tricare	Medicare Part A, Medicare Part B	Commercial → Medicare Part D → Tricare (excluding the primary Tricare plan) → Medicaid → FAP → IWP → M3P
Medicaid	All payer types except the permitted Medicaid → IWP flow	Medicaid → IWP
Insurance Plan	All external insurance plans	No automatic transmission to external insurance plans

- **Internal Plan Exclusions:**

The following internal/system plans are not considered for automatic copay transmission:

- FMC Bundle
- FMC Clinic Charge
- FKC Plan
- FKC Binder Plan

- FMC Injectables
- FKC Leadership Review

If an **Internal Plan** is the primary insurance, the Auto Transmit Copay process stops. The system does not automatically transmit copay to Commercial, Tricare, Medicare, Medicaid, FAP, IWP, or M3P plans.

- **Multiple Insurance Plans:** If the patient has multiple insurance plans within the same category, the system uses the order configured in the patient's Insurance Profile, such as **Secondary → Tertiary → Quaternary**.
 - For Example: If a patient has multiple Commercial insurance plans, the system selects the downstream plan based on the insurance priority configured in **Patient Demographics → Insurance**

- **Insurance Plan Type Classification**

The system groups insurance plans into the following hierarchy categories:

- **Commercial:** Commercial Insurance Co.
 - **Commercial Level Consideration:** Group Health Plan, Blue Cross/Blue Shield, Preferred Provider Organization (PPO), Health Maintenance Organization (HMO), Exclusive Provider Organization (EPO), Point of Service (POS), Indemnity Insurance, Mutually Defined, Other Federal Program, Other Non-Federal Programs
 - **Tricare:** CHAMPUS / Tricare
 - **Medicare:** Medicare Part A, Medicare Part B, Medicare Part D
 - **Medicaid:** Medicaid
 - **FAP:** Financial Assistance Programs (FAP)
 - **IWP:** Indigent Waiver Program (IWP)
 - **M3P:** Medicare Prescription Payment Plan (M3P)
- **FAP, IWP, and M3P Processing**
 - When both **FAP** and **IWP** are available as eligible downstream plans, FAP is considered before IWP.

- **M3P** is considered after IWP when applicable.
- M3P is skipped when it is excluded for the applicable primary insurance plan type.
- The system follows the defined payer hierarchy rather than simply selecting the next insurance by numeric priority.

Example – Medicare Part D as Primary:

If Medicare Part D is the primary insurance, the system evaluates downstream insurance in this order:

- Commercial → Tricare → Medicaid → FAP → IWP → M3P

For example, if the patient has:

- Medicare Part D – Primary
- Commercial – Secondary
- Medicare Part B – Tertiary
- FAP – Quaternary
- IWP – Additional insurance

The system will select **Commercial** as the next eligible insurance.

Medicare Part B will be skipped because it is not an eligible downstream payer when Medicare Part D is primary.

- If the hierarchy is stopped by the user for example in the above case if the user manually selected Tricare as secondary after Part D instead of Commercial then in auto transmit it will select commercial after Tricare instead of Medicaid.
- **Manual Copay Transmission:**
 - The above hierarchy rules are applicable only to automatic copay transmission.
 - For manual copay transmission, the system continues to use the insurance priority configured in the patient chart → Insurance. The Auto Transmit Copay hierarchy rules do not apply to manual transmission.

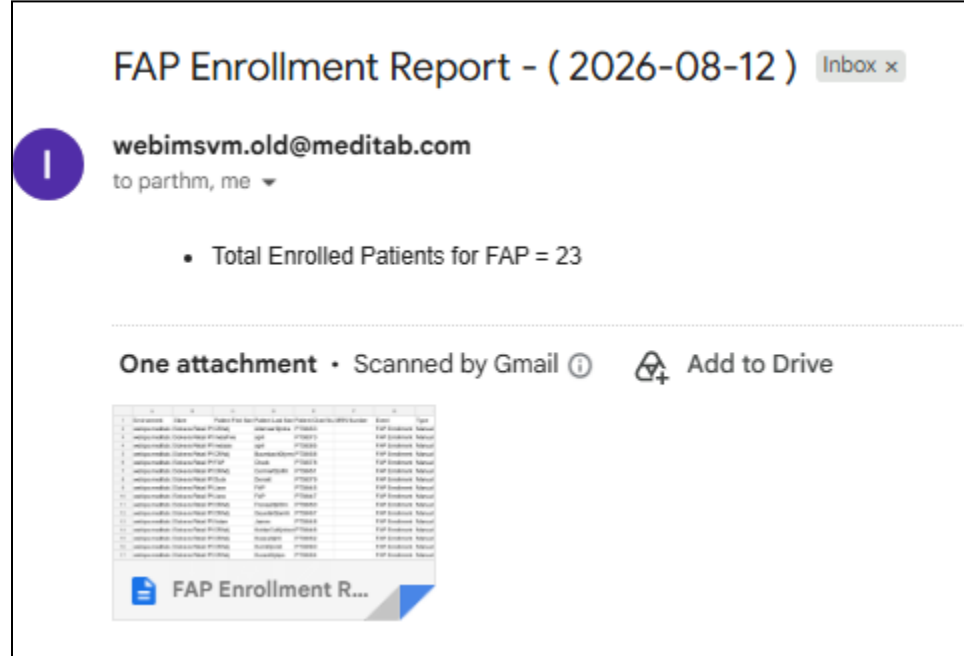

6. Report(Day End) - FAP(Enrollment, Disenrollment and Inactivity Disenrollment)

This enhancement introduces automated FAP event tracking, daily reporting, and standardized patient letter generation for the FreseniusRx Financial Assistance Program (FAP). The enhancement is designed to support CMS-required patient notifications when a patient's FAP enrollment status changes due to **Enrollment, Disenrollment, or 12-month Inactivity Disenrollment**. The solution automates the identification of these events, generates daily Excel reports for operational follow-up, and provides standardized letter templates that staff can review, edit, print, and fax to patients.

Key Enhancements:

1. Automated Email Generation & Distribution

- The system generates the applicable **FAP daily Excel reports automatically at End of Day (EOD)**
- Three separate reports are generated based on the FAP event:
 - **FAP Enrollment Report – [Date]**
 - **FAP Disenrollment Report – [Date]**
 - **FAP Inactivity Disenrollment Report – [Date]**
 - **Date** = The Date on which the report is generated.
- The generated reports are automatically emailed to the **recipient(s) configured in the Backend Table**.
- This eliminates the need for users to manually generate and distribute daily FAP event reports.
- Reports provide operational visibility into FAP status changes and support timely follow-up by the responsible teams based on the shared sheet in email.
- Total count of patients is also shown in the email in each of the reports.

2. FAP Enrollment Event Tracking

- The system automatically identifies an **FAP Enrollment** event when:
 - An FAP Plan is manually added to the patient's Insurance section.
 - An FAP Plan is added automatically through an Eligibility Response.
 - An inactive FAP Plan is manually reactivated.
 - An inactive FAP Plan is reactivated automatically through Eligibility Response.
- The system captures whether the update was **Manual** or **Automatic** and shows in the report in the type field.
- For manual updates, the employee who performed the update is recorded in the generated report.
- If there are multiple FAP Plans the entries will be added for each individual insurance when triggered.

- For automatic updates, the system records the updater as **System**.
- The update date and time are recorded according to the **store's time zone**.
- Fields that will be shown in the report:

3. FAP Disenrollment Event Tracking

- The system automatically identifies an **FAP Disenrollment** event when an FAP Plan is inactivated.
- The event will be triggered through:
 - Manual user action.
 - Automatic Eligibility Response.
- The system captures the event type, user/system responsible for the update, and the update date/time based on the store's time zone and the entry will be added to the report.

4. FAP Inactivity Disenrollment

- The system performs a scheduled evaluation to identify patients who have **not utilized their FAP Plan for 12 months**.
- The 12-month inactivity calculation is based on the **current date and the store's time zone**.
- Once the inactivity condition is met, an FAP Inactivity Disenrollment event is generated.
- This provides a consistent process for identifying patients who need to be notified due to FAP inactivity.

5. Automated Daily Excel Reports

The system generates the following reports at the end of each day:

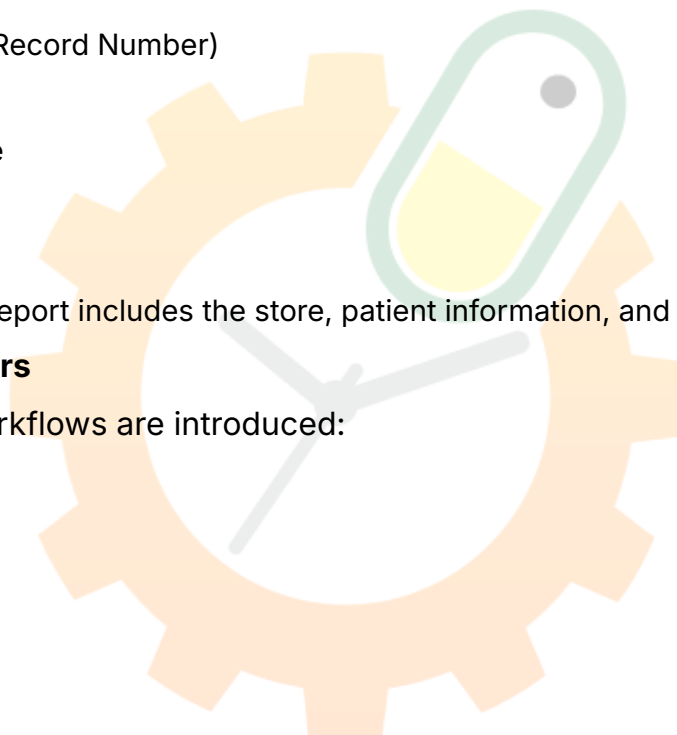

- **FAP Enrollment Report – [Date]**
- **FAP Disenrollment Report – [Date]**
- **FAP Inactivity Disenrollment Report – [Date]**

- Enrollment and Disenrollment reports include information such as:
 - Store
 - Patient First Name
 - Patient Last Name
 - Patient Chart Number
 - MRN Number(Medical Record Number)
 - FAP Event
 - Manual/Automatic Type
 - Updated By
 - Updated On
- The Inactivity Disenrollment report includes the store, patient information, and inactivity disenrollment event.

6. Standardized FAP Patient Letters

Three system-defined letter workflows are introduced:

- **FAP Enrollment Letter**

Dear stark

Congratulations! You are enrolled in the FreseniusRx Financial Assistance Program.

The FreseniusRx Financial Assistance Program is designed to eliminate the copayment amounts associated with Medicare Part D Extra Help which may vary between \$1.60, \$4.80, \$4.90 or \$12.15. You will enjoy the benefits of this program which eliminates these copayments for all your prescriptions covered by your Part D insurance. This program is valid for one year or until your Medicare Part D Extra Help eligibility changes. You will receive a new enrollment letter at the beginning of 2026 for another year of acceptance or a

¡Felicidades! Está inscrito en el Programa de Asistencia Financiera de FreseniusRx.

El Programa de Asistencia Financiera de FreseniusRx está diseñado para eliminar los montos de copago asociados con el programa Extra Help de Medicare Parte D, que pueden variar entre \$1.60, \$4.90, \$5.10 o \$12.65. Disfrutará de los beneficios de este programa que elimina estos copagos para todas sus recetas cubiertas por su seguro de Medicare Parte D. Este programa es válido por un año o hasta que cambie su elegibilidad para Extra Help de Medicare Parte D. Recibirá una nueva carta de inscripción a principios de 2027 para otro año de aceptación, o una carta de baja si ya no es elegible para el programa.

Dear stark

We regret to inform you that you do not qualify for the FreseniusRx Financial Assistance Program.

To qualify, you must have a current Medicare Extra Help prescription drug plan and have Tier Level 1, 2, or 3 copayments.

Please reach out to your Medicare Part D plan to confirm your eligibility. If at any time, you

Close Print Send Fax

- **FAP Inactivity Disenrollment Letter**
- Each applicable letter is available in **English and Spanish**
- The templates are system-defined and cannot be deleted. However, users can edit and save the template content to support operational flexibility.

7. Dynamic Patient Information

- When a letter is generated, the system automatically populates relevant patient information, including:
 - Patient Name
 - Primary Street Address
 - City, State, and ZIP Code
 - Patient Last Name
 - Letter Generation Date
- The letter generation date is based on the **store's time zone**, reducing the need for manual entry and helping maintain consistent patient communication.

8. Print and Fax Workflow

- Users can access the FAP letters through: **Patient Demographics → Fax Document**
- Users can:
 - Open the standard **Print Fax Document** modal.
 - Select the appropriate FAP letter template.
 - Review the system-populated information.
 - Edit the letter when required.
 - Print or fax the letter to the patient.
 - This workflow is available for Enrollment, Disenrollment, and Inactivity Disenrollment letters.

Note: To load all the FAP templates you must setup all the FAP letter templates to the template setup screen

Benefits:

- **Regulatory CMS Compliance:** Guarantees mandatory patient notification workflows for Medicare Part D LIS Extra Help copay adjustments across enrollment, disenrollment, and 12-month inactivity lifecycle events.
- **Operational Visibility:** Delivers automated daily EOD batch Excel reports directly to configured internal stakeholders, providing clear FAP plan update via manual vs. automatic eligibility status changes.
- **Data Accuracy & Standardization:** Auto-populates patient demographics (Name, Primary Address, DOB, Store Date) directly into system-defined templates, reducing manual data entry errors.
- **Workflow Flexibility:** Supports both manual staff update and automated Eligibility Response triggers (for email generation) while allowing users to review and edit letter template contents prior to printing it.
- **Configuration Flexibility:** Allows administrators to update the email template without application code changes.

Scope:

- **In Scope:**
 - FAP Event Tracking: Automatic detection of FAP plan creation, reactivation, inactivation (manual/eligibility response), and 12-month inactivity based on store timezone.
 - Automated Daily Reporting: End-of-Day (EOD) generation and email distribution of three Excel batch reports (Enrollment, Disenrollment, and Inactivity Disenrollment) to backend-configured recipients.
 - System-Defined Templates: Creation of three non-deletable system letter templates (FAP Enrollment Letter, FAP Disenrollment Letter, and FAP Inactivity Disenrollment Letter).
 - Dynamic Field Auto-Population: Automatic mapping of patient demographics (Name, Street Address, City, State, Zip, Patient Last Name) and store-specific Letter Generation Date.

- Print & Fax Workflow: Access and preview via Patient Demographics → Fax Document modal, allowing pharmacy staff to edit, print, and fax letters.

- **Out of Scope:**

- Automatic background printing FAP Enrollment / Disenrollment letters to patients without user intervention.
- Direct integration with third-party mail distribution vendors for auto-mailing physically printed letters.

7. Report(Day End) - IWP(Enrollment, Disenrollment and 60 Days Expiration Notice)

This enhancement introduces automated IWP lifecycle event tracking, daily reporting, and standardized patient letter generation for the **FreseniusRx Indigent Waiver Program (IWP)**. The enhancement is designed to support **CMS notification requirements** for IWP Enrollment, 60-Day Expiration, and Disenrollment events. The solution automates daily event identification and Excel report generation, emails reports to configured recipients, and provides standardized letters that pharmacy staff can review, edit, print, and fax to patients. It also introduces business rules to handle multiple IWP plans, coverage gaps, suppression conditions, and duplicate event prevention.

Key Enhancements:

1. Automated Email Generation & Distribution

- The system generates IWP lifecycle reports automatically through a scheduled **End-of-Day (EOD) process**.
- Three separate Excel reports are generated:

IWP Enrollment Report – [Date]

- **IWP Enrollment Report – Fields:** Store, Patient First Name, Patient Last Name, Patient Chart, Number, MRN Number, PT Mailing Address, Enrollment Type, Event, Updated By, Updated On

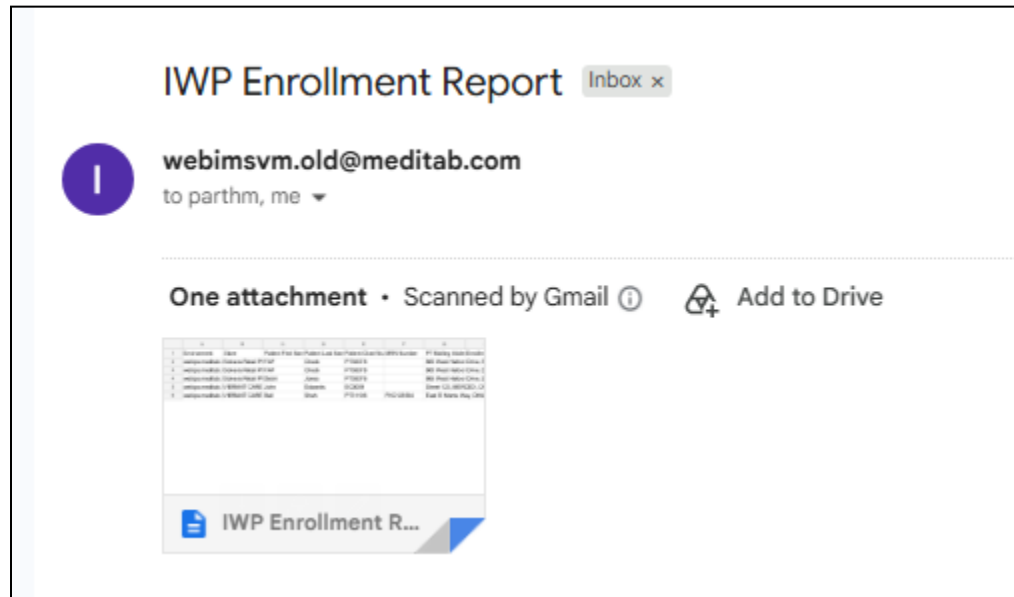

IWP 60 Day Expiration Report – [Date]

- **IWP 60 Day Expiration Report – Fields:** Store, Patient First Name, Patient Last Name, Patient Chart Number, MRN Number, PT Mailing Address, Event(60 Days expiration Notice)

IWP DisEnrollment Report – [Date]

- **IWP DisEnrollment Report – Fields:** Store, Patient First Name, Patient Last Name, Patient Chart Number, MRN Number, PT Mailing Address, Enrollment Type, Event(IWP Disenrollment)

- Date = The date when the report is generated.

- The generated reports are automatically emailed to the **recipient(s) configured in the Backend Configuration Table**.
- Reports provide operational visibility into IWP enrollment, upcoming expiration, and disenrollment activity.

2. IWP Enrollment Event Tracking

- The system automatically generates an **IWP Enrollment** event for applicable Type 2(has Clinic= IW) and Type 3(Enrolled via Application) enrollment scenarios.
- Enrollment events are triggered when:
 - An IWP Plan is manually added to the patient's Insurance section.
 - The **From Date and/or To Date** of an existing IWP Plan is updated.

- An **IWP Policy Renewal** is created under an existing IWP Plan.
- An inactive IWP Plan is manually reactivated.
- The system records the applicable Enrollment Type and event details for reporting and letter generation.
- If there are multiple IWP plans available for the patient at that time the entries will be reported for individual plans in the report when triggered based on the events.

3. IWP DisEnrollment Event Tracking

- The system generates an **IWP DisEnrollment** event when applicable IWP coverage ends.
- DisEnrollment can be triggered when:
 - An IWP Plan is set to **Inactive**.
 - An IWP Plan is **deleted** from the patient's Insurance section.
 - The IWP Plan has expired and there is **no active renewal policy covering the current date**.
- Renewal-policy suppression rules are also applied:
 - DisEnrollment is suppressed when a renewal policy starts exactly **one day after the current policy To Date**.
I.e If the Policy is ending today and the next policy date is from tomorrow at that time the entry won't be added in the report.
 - DisEnrollment is not suppressed when the renewal starts later than one day after the current policy To Date, as this represents a coverage gap.
I.e If the Policy is ending today and the next policy date is after 2 days at that time the entry will be added in the report as the policy is considered as inactive.

4. IWP 60-Day Expiration Notice

- The system automatically identifies patients whose IWP coverage is approaching expiration and generates an **IWP 60-Day Expiration Notice**.
- The event is triggered when:
 - The IWP Plan **To Date is exactly 60 days from the current date**
 - I.e To date in the policy is exactly 60 days from the current date at that time the notice will be sent.
I.e entry will be added in the report.
 - A newly created IWP Plan (creation date of the plan will be considered) has a To Date that is **less than 60 days away**.
 - The created policy has a To date that is less than 60 days at that time the report will be generated for this.
- The system also applies renewal-policy suppression rules:
 - The notice is **suppressed** when an active renewal begins exactly one day after the current plan's To Date.
 - The notice is **not suppressed** when the renewal begins later than one day after the current plan's To Date, because this represents a potential coverage gap.
 - Each qualifying event for each insurance (IWP Type) is included **only once per daily report**.

5. IWP Enrollment Types & Patient Letters

- The system supports two IWP Enrollment types:
 - **IWP Enrollment Type 2 – Has Clinic IW**

Dear Johnson

Congratulations! You are enrolled in FreseniusRx's Indigent Waiver Program until **2044-08-18**. You will enjoy the benefits of this program, which eliminates copays for all your kidney-related prescriptions covered by your Medicare Part D insurance.

Medications not covered by Medicare Part D may not qualify for this benefit. You will be notified by mail if your enrollment will be extended another year or if you will be disenrolled and must reapply.

You qualify for this program because you:

- Actively fill prescriptions through the FreseniusRx.

Estimado Johnson

¡Felicitaciones! Usted está inscrito en el Programa de Exención de Indigentes de FreseniusRx hasta el 2044-08-18. Usted disfrutará los beneficios de nuestro programa, el cual elimina los copagos para todas sus prescripciones renales cubiertas por su seguro.

Se le notificará por correo si su inscripción se extenderá otro año o si se le desafiliará y debe volver a presentar su solicitud.

Se ha confirmado que usted califica para este programa, ya que usted:

- Actualmente surte sus prescripciones con FreseniusRx.
- Está inscrito en el Programa de Exención de Indigentes de Fresenius Kidney Care.

File Name: * IWP Enrollment Type 3 (Enrolled via Application) -

Close Print Send Fax

- Separate system-defined letter templates are provided for each type in **English and Spanish**.
- The appropriate template can be selected from the **Patient Demographics → Fax Document** screen. The system automatically populates the patient information and allows staff to review, edit, and print the letter.

6. Dynamic Enrollment Letter Information

- Enrollment letters automatically populate:
 - Patient Name

- Street Address
- City, State, ZIP Code
- Letter Generation Date
- Patient Last Name
- **Expiration Date**
- The Expiration Date is taken from the **IWP Insurance Plan → To Date** associated with the plan that triggered the event. If multiple IWP plans exist, the system uses the To Date from the plan responsible for the current event.

7. IWP 60-Day Expiration Letter

- A new system-defined **IWP 60 Day Expiration Notice – Type 5** template is provided in English and Spanish.
- The letter automatically populates:
 - Patient Name
 - Street Address

- City, State, ZIP Code
- Letter Generation Date
- Patient Last Name
- IWP Expiration Date
- The letter informs the patient that their IWP enrollment is approaching expiration and instructs them to work with their social worker/pharmacy care team to begin the renewal process and provide the required documentation.

Dear Johnson

Your Indigent Waiver Program (IWP) enrollment will expire on 08/18/2044. The IWP helps cover your out-of-pocket cost of the medications you are receiving through our pharmacy.

Make sure your IWP enrollment does not expire. At your next dialysis appointment, talk to your social worker who can work with your pharmacy care team to get the renewal process started today. You will need to provide documents for qualification verification before 08/18/2044. Examples of the documents required are listed below:

Current Bank Statement Pay Stub
Social Security Award Letter
Copy of Direct Express Bank Card

Lamentamos informarle que usted no califica para el Programa De Exención Para Indigentes de FreseniusRx's.
Se le ha dado de baja por la siguiente razón:

- Su aplicación aprobada para el Programa de Excepción Para Indigentes de FreseniusRx ha caducado.

Si tiene alguna pregunta sobre el programa o nuestros servicios, llámenos al 1-800-947-3131.

Gracias,

Section 1/1 Page 1/1 Line 1 Column 0 English (United States)

File Name: * IWP DisEnrollment Type 3 (Enrolled via Application)

Close Print Send Fax

- Each type has system-defined **English and Spanish** templates.
- The appropriate template can be selected from **Patient Demographics → Fax Document**, where patient information is automatically populated and the user can review, edit, and print the letter.

9. Multiple Active IWP Plan Handling

- When a patient has multiple active IWP plans:
- The system evaluates only the **insurance plan that triggered the current event**.

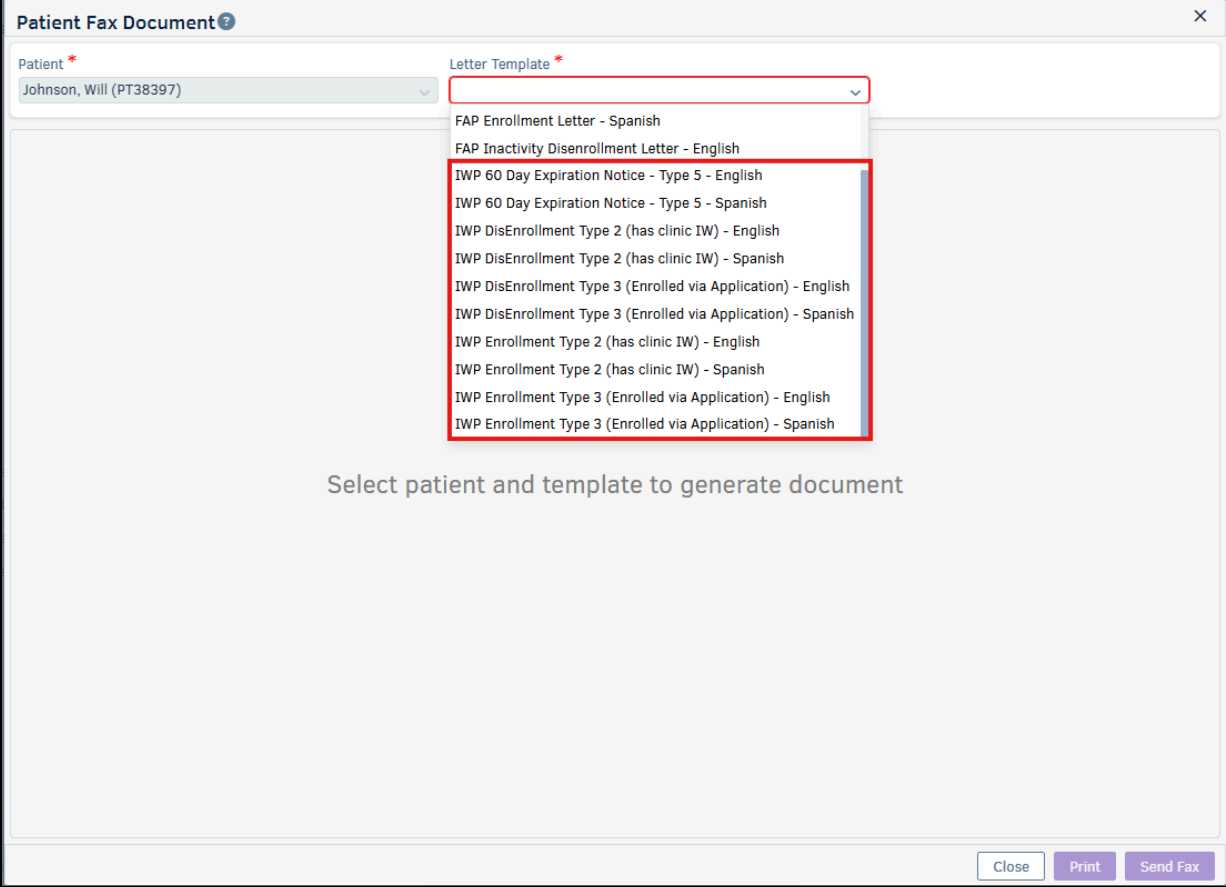

- If multiple plans independently satisfy the same event condition at the same time, each plan is processed independently.
- Separate events and report records are generated for each qualifying plan.

10. Duplicate Event Prevention

- Only **one Enrollment, Expiration, or DisEnrollment event per Insurance Plan per Event Type per day** is generated.
 - I.e If the IWP plan is enrolled today and disenrolled on the same day the latest entry i.e Disenrollment will be added in the report.
- Duplicate events for the same patient insurance plan are prevented.

11. Standardized Print & Fax Workflow

- All IWP letters are available through: **Patient Demographics → Fax Document**
 - Open the standard Fax Document modal.
 - Select the applicable IWP letter template.
 - Review system-populated patient information.
 - Edit the letter if required.
 - Print the letter.
 - This workflow applies to Enrollment, 60-Day Expiration, and DisEnrollment letters.

The screenshot shows a window titled "Patient Fax Document" with a close button (X) in the top right corner. Inside the window, there are two dropdown menus. The first is labeled "Patient" and has "Johnson, Will (PT38397)" selected. The second is labeled "Letter Template" and is open, showing a list of templates. The list includes:

- FAP Enrollment Letter - Spanish
- FAP Inactivity Disenrollment Letter - English
- IWP 60 Day Expiration Notice - Type 5 - English
- IWP 60 Day Expiration Notice - Type 5 - Spanish
- IWP DisEnrollment Type 2 (has clinic IW) - English
- IWP DisEnrollment Type 2 (has clinic IW) - Spanish
- IWP DisEnrollment Type 3 (Enrolled via Application) - English
- IWP DisEnrollment Type 3 (Enrolled via Application) - Spanish
- IWP Enrollment Type 2 (has clinic IW) - English
- IWP Enrollment Type 2 (has clinic IW) - Spanish
- IWP Enrollment Type 3 (Enrolled via Application) - English
- IWP Enrollment Type 3 (Enrolled via Application) - Spanish

Below the dropdown menus, the text "Select patient and template to generate document" is displayed. At the bottom right of the window, there are three buttons: "Close", "Print", and "Send Fax".

Note: To load all the IWP templates you must setup all the IWP letter templates to the template setup screen

Benefits:

- **Regulatory Compliance:** Adheres to CMS notification mandates by providing audit-ready records and timely patient disclosures regarding benefit status.

- **Operational Efficiency:** Automates daily event detection and report distribution, reducing manual tracking overhead for pharmacy staff and financial assistance teams.
- **Proactive Continuity of Care:** Minimizes coverage gaps by alerting patients 60 days prior to benefit expiration, facilitating timely document submission via clinic social workers.
- **Enhanced Data Precision:** Standardizes letter templates and dynamic population logic, reducing human error in patient communications.
- **Configuration Flexibility:** Allows administrators to update the email template without application code changes.

Scope:

In Scope:

- Automatic detection of IWP Events (Enrollment, Reactivation, Inactivation, 60 Day Expiration)
- Automated Daily Reporting: End-of-Day (EOD) generation and email distribution of three Excel batch reports (Enrollment, 60 Days Expiration Notice, and DisEnrollment) to backend-configured recipients.
- System-Defined Templates: Creation of ten non-deletable system letter templates in English and Spanish language. (IWP Enrollment Type 2, IWP Enrollment Type 3, IWP 60 Day Expiration Notice Type 5, IWP DisEnrollment Type 2 and IWP DisEnrollment Type 3).
- Dynamic Field Auto-Population: Automatic mapping of patient demographics (Name, Street Address, City, State, Zip, Patient Last Name) and store-specific Letter Generation Date.
- Print & Fax Workflow: Access and preview via Patient Demographics → Fax Document modal, allowing pharmacy staff to edit, print, and fax letters.

Out of Scope:

- Automatic background printing IWP Enrollment, 60 Day Expiration Notice, DisEnrollment letters to patients without user intervention.
- Direct integration with third-party mail distribution vendors for auto-mailing physically printed letters.

8. OCC Override support for Primary Insurance Claims

This enhancement introduces **OCC (Other Coverage Code) Override** support for **Primary Insurance** to improve claim submission by allowing users to manually override the Coordination of Benefits (COB) information included in the claim request. This provides greater flexibility for payer-specific requirements and exception scenarios.

Key Enhancements:

- Enabled the **OCC Override** checkbox for **Primary Insurance**.
- Users can now enable **OCC Override** and enter the appropriate segment values to generate the **Other Coverage Code (OCC)** segment when processing Primary Insurance claims.
- When the **OCC Override** option is enabled during claim submission:
 - The system generates the **Coordination of Benefits (COB)** segment using the values configured in the **OCC Override** screen.
 - The selected OCC override values are included in the **Primary Insurance Claim Request** COB segment.

Benefits:

- Enables COB segment submission for **Primary Insurance**.
- Improves claim accuracy for payer-specific and exception processing scenarios.
- Allows users to manually override COB information before claim submission when required.
- Provides greater flexibility in handling primary insurance claim submissions that require customized COB information.

9. Lock for Bills/Claims/Authorization at Bill Level

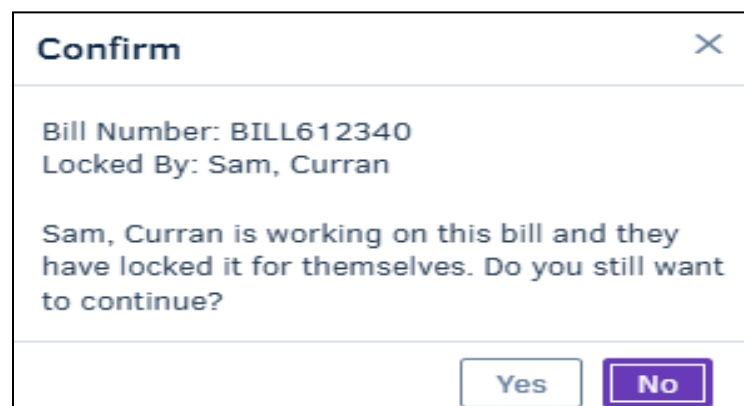

A user-controlled locking mechanism has been introduced for **Billing, Rx Claims, and Authorization Request Tracking**. Users can now manually lock an item while working on it, allowing other users to clearly identify who is currently working on the item. The lock status is displayed across relevant screens and is updated in real time to provide better visibility and coordination between users.

Key Enhancements

- **In Billing Modal :**
 - Added a **Lock/Unlock toggle** in the top-right corner of the Billing Modal.
 - When a bill is locked, a **"Locked by User Name on Date & Time"** indicator is displayed next to the lock icon.

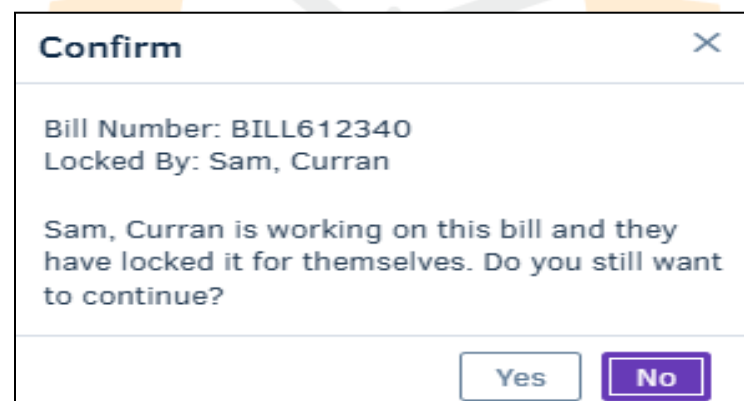

The screenshot displays the 'Billing' modal interface. At the top right, a red notification bar states 'Locked By Sam, Curran on 08/12/26 08:16 PM' next to a lock icon. The modal is divided into several sections: 'Patient Info' (Shah, Bell, PT31106, MR no.:FKC123564, Male, DOB: 01/17/1990, OC: \$389.46, ADF On File), 'Prescription Detail' (Prescribed Drug: IPOL VIAL (49...), NDC: 49281086078, Prescribed Date: 08/09/26, DAW: 0-No Selection), 'Other Details' (Fill Number: 0, Remaining Refill: 1, Facility: (29544) Testing Only), and 'Insurance Summary' (Insurance: AETNAPDP, Claim Priority: Primary, Claimed: \$208.00). Action buttons at the top right include Eligibility, Transmit, Request Auth, Cancel Changes, Delete, and Save. A status bar at the bottom right indicates '#BILL612340 Created By support on 08/10/26 12:17 AM'.

- When another user opens a bill that is locked by someone else, a confirmation prompt is displayed informing them who has locked the bill.

A screenshot of a 'Confirm' dialog box. The title bar says 'Confirm' with a close button (X) on the right. The main text area contains: 'Bill Number: BILL612340', 'Locked By: Sam, Curran', and a paragraph: 'Sam, Curran is working on this bill and they have locked it for themselves. Do you still want to continue?'. At the bottom right, there are two buttons: 'Yes' and 'No'.

- Users can continue to **edit the bill** even when it is locked by another user, however, confirmation is required before performing key actions such as **Transmit, Reverse, Save, Request Authorization, Delete**.

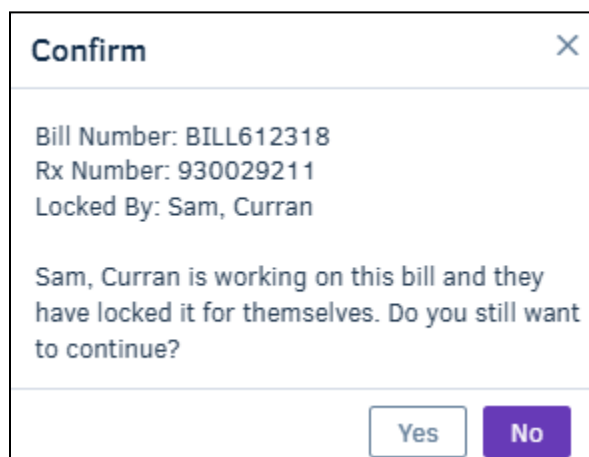

A screenshot of a 'Confirm' dialog box, identical to the one above. It contains the same text: 'Bill Number: BILL612340', 'Locked By: Sam, Curran', and the confirmation question. The 'Yes' and 'No' buttons are at the bottom right.

- Only the user who applied the lock can **unlock** the bill.
- **Rx Claims / Claims Tracking:**
 - Locked bills are clearly identified in the Rx Claims screen.

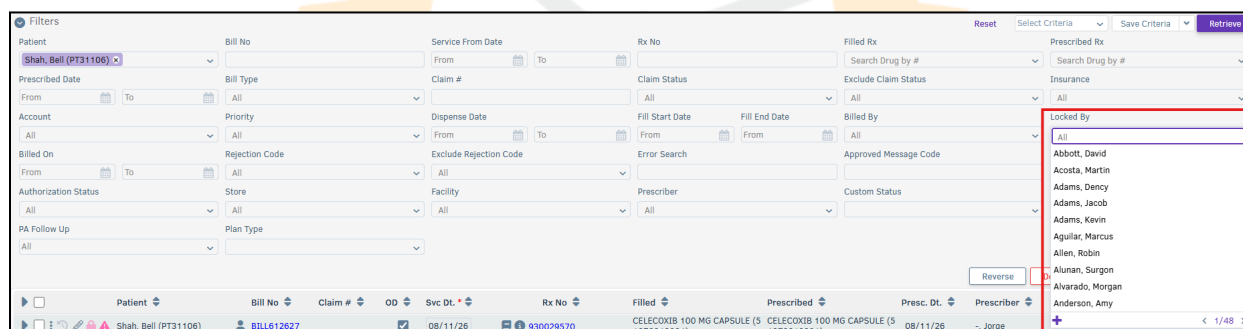

- Bills locked by another user are displayed with a **grayed-out appearance** for easier identification.
- The lock status is displayed beside the Open **Bill (Pencil)** icon and before the **Warning Sign**.
- The lock Symbol is also displayed beside **Auth Status**.

- When a user attempts to perform actions such as **Transmit, Reverse, Save, Request Authorization, or Delete** on a bill locked by another user, a confirmation prompt is displayed.
- The prompt provides the **Bill Number, Rx Number, and name of the user who has locked the bill**.

- Added a **Locked By** filter with a list of users to help identify and filter locked claims.

- **Authorization Request Tracking :**

- Authorizations associated with locked bills are identified as locked in Authorization Request Tracking.
- Locked authorization rows are displayed with a **grayed-out** appearance for better visibility.
- Lock status is displayed beside **follow up Flag icon** with additional lock information available on hover.

Benefits :

- Provides clear visibility into **who is currently working on a Bill**
- Reduces the risk of users unknowingly making conflicting updates.
- Improves collaboration when multiple users are working on the same items.
- Provides users with greater control over their work through **manual lock and unlock functionality**.
- Real-time status updates ensure users always have the latest lock information.

10. Patient Insurance - Add Benefit ID and Contract Number Fields

Enhanced Patient Insurance functionality to support **Contract Number** and **Benefit ID** information.

Key Enhancements:

- Added **Contract Number** and **Benefit ID** fields to Patient Insurance plans.
- Values are automatically populated from the **Insurance Plan Master** when an insurance plan is selected.

Policy Details

Insurance Plan*	Plan Number	Group Name	Group Number	Default Priority*
00672021-a				Primary
Contract Number	Benefit ID	Copay		
2323	35052			
Policy Renewal				

- Added **Contract Number** and **Benefit ID** columns to the Insurance selection dropdown.
- Enhanced Insurance search functionality to support:
 - & prefix for searching by **Contract Number**
 - \$ prefix for searching by **Benefit ID**

Insurance Plan*	Plan Number	Group Name
00672021-a		

Insurance Plan	BIN#	PCN	Contract No. &	Benefit Id \$

11. FAP Copay Rules : Rights Add in Security Rights Setup

Security rights have been introduced for the **FAP Copay Rules** screen to provide administrators with granular control over user access and actions. The **FAP Copay Rules screen** is now included under **Billing Configuration**.

Key Enhancements:

- Added Following Rights to access the FAP Copay Rules screen.
 - View
 - Create
 - Update
 - Delete

▼ Billing Configuration	☒ View	☒ Create	☒ Update	☒ Delete
☒ Select All Adjustment Category	☒ View	☒ Create	☒ Update	☒ Delete
☒ Select All Adjustment Code	☒ View	☒ Create	☒ Update	☒ Delete
☒ Select All Authorization Details	☒ View	☒ Create	☒ Update	☒ Delete
☒ Select All Authorization Request Tracking	☒ View			
☒ Select All Authorization Status History	☒ View			
☒ Select All Diagnosis List	☒ View	☒ Create	☒ Update	☒ Delete
☒ Select All Drug Bill To Setup	☒ View	☒ Create	☒ Update	☒ Delete
☒ Select All FAP Copay Rules	☒ View	☒ Create	☒ Update	☒ Delete

- **View Permission**

- Users with **View** permission can access and view the FAP Copay Rules screen.
- If View permission is not granted, the **FAP Copay Rules screen will not be visible or accessible** to the user, regardless of other permissions assigned.

- **Create Permission**

- Users with **Create** permission can add new FAP Copay Rules.
- If Create permission is not granted, the user can view the screen but **will not have the option to add** a new FAP Copay Rule.

- **Update Permission**

- Users with **Update** permission can modify existing FAP Copay Rules.
- If Update permission is not granted, the user can view the existing rules but **will not be able to make changes** to them.

- **Delete Permission**

- Users with **Delete** permission can delete existing FAP Copay Rules.
- If Delete permission is not granted, the **Delete option will not be available** to the user.
- When a permission is specifically configured for a user, the **User-level permission takes precedence** over Job Title and Security Group permissions.

Benefits

- Provides control over access to FAP Copay Rules.
- Helps ensure that users can perform only the actions permitted for their role.
- Reduces the risk of unauthorized creation, modification, or deletion of FAP Copay Rules.
- Simplifies permission management across different users and organizational roles.

12. Changes Regarding Duplicate Patient EMPI ID Generation Request.

Updated the EMPI patient matching process to send additional patient demographic and contact details for matching. The Match % received from EMPI is now displayed on the Patient Matching Records screen, so users can easily review the match percentage for each returned patient record.

Key Enhancements:

- On creating the patient, the system finds the patient matching records from the EMPI interface.
- **Following fields** will be sent to the EMPI for finding the patient matching records.
- Added patient demographic fields such as **Firstname, Lastname, Dob, SSN, Mrn, Home, Work, and Other addresses** to the EMPI matching request.
- Added the **Landline phone number and Extension** to the EMPI request.
- These additional patient details are now sent to EMPI for matching.
- EMPI returns a list of patients ranked based on the **match percentage calculated from the provided patient information**.
- The **Match %** is now displayed on the **Patient Matching Records** screen for each returned patient record, making it easier for users to review the matching results.

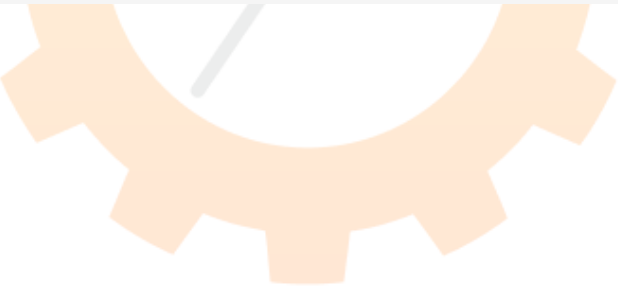

Patient Matching Record(s)

The following patients are already present in the system. If you want to use an existing patient, click "Select" button or double-click the desired row. To continue creating a new patient, click "Skip & Create New".

Match %	First Name	Last Name	EMPI Code	System Code	DOB	Gender	SSN	Address	Status	Update Date/Time	
70%	KARA	WHITESIDE	8002043679	FRXCARE	07/31/2008	Male		1254 MAPLE RIDGE DR, LITTLE ROCK, AR 72211	Active	08/06/26 03:34 AM	Select

Add To Queue	Alt+Q
Move To Queue	Alt+M

14. Account Receivable – Write-Off Confirmation Enhancement

The **Account Receivable** write-off process has been enhanced to improve user visibility and prevent accidental write-offs. The enhancement introduces total receivable amount display and confirmation dialogs for both bulk and single-record write-off operations, ensuring users can review the write-off amount before the adjustment receipt is generated.

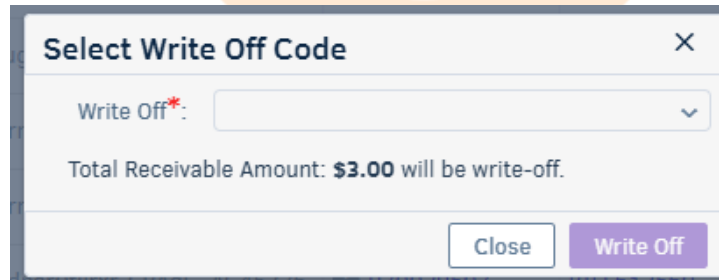

Key Enhancements

1. Bulk Write-Off

- When multiple receivable records are selected and the **Write Off** action is initiated, the **Select Write Off Code** modal now displays the following information below the **Write Off Code** field:

Total Receivable Amount: <<Amount>> will be write-off.

- The displayed amount represents the total receivable amount for all eligible records selected for the write-off operation.
- When the user clicks **Write Off**, the system displays the following confirmation message:

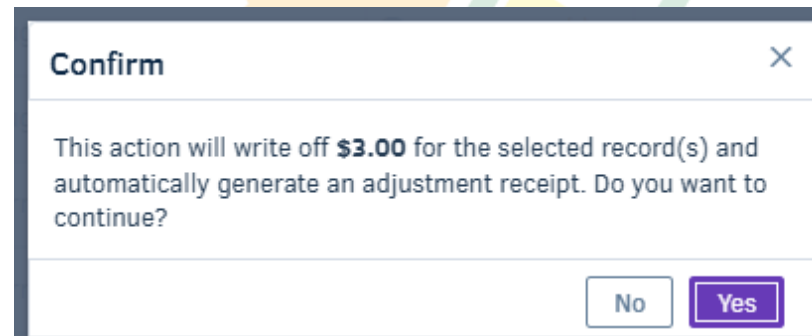

- Clicking **Yes** completes the write-off and automatically generates the adjustment receipt.

- Clicking **No** closes the confirmation dialog and returns the user to the **Select Write Off Code** modal without performing the write-off.

2. Single Record Write-Off

- When a single receivable record is written off using the **Add Write Off** modal, clicking the **Write Off** button displays a confirmation dialog before the transaction is completed.
- The confirmation dialog displays the write-off amount entered in the **Add Write Off** modal and informs the user that an adjustment receipt will be generated.

- Clicking **Yes** completes the write-off and automatically generates the adjustment receipt.
- Clicking **No** closes the confirmation dialog and returns the user to the **Add Write Off** modal without performing the write-off.

Exception: The confirmation dialog is not displayed when a write-off is initiated from:

- Account Payment Receipt → Write-Off overlay.
- Adjustment / Remark Codes modal.

Benefits:

- Improves user visibility by displaying the total receivable amount before a write-off is performed.
- Reduces the risk of accidental write-offs by introducing confirmation dialogs for both bulk and single-record write-off operations.
- Provides users with an opportunity to review and confirm the write-off amount before an adjustment receipt is generated.

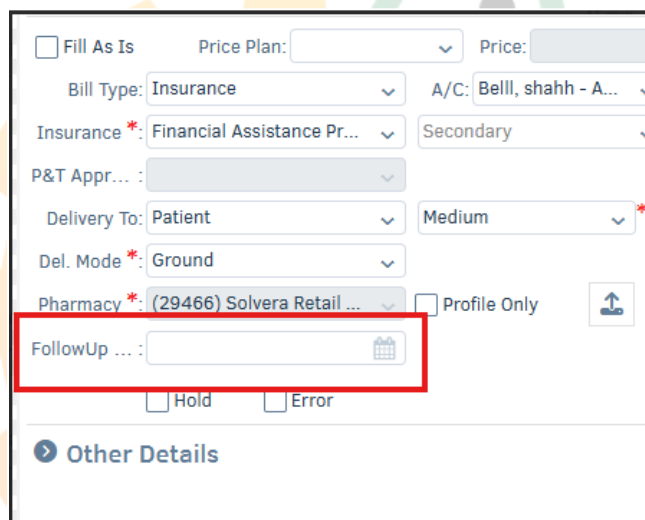

15. Prescription - Follow-Up Option

We have added a new Field followup date in Prescription and also the followup date will be shown in the retail workflow window.

Key Enhancements:

- **Prescription Entry:** A new Follow-up Date field has been added, located before the 'Hold' checkbox.

The screenshot displays the Prescription Entry form with various fields and checkboxes. A red rectangular box highlights the 'FollowUp ...' field, which includes a calendar icon for date selection. The form contains the following elements:

- ☐ Fill As Is
- Price Plan: [dropdown]
- Price: [text field]
- Bill Type: Insurance [dropdown]
- A/C: Belll, shahh - A... [dropdown]
- Insurance*: Financial Assistance Pr... [dropdown]
- Secondary [dropdown]
- P&T Appr...: [dropdown]
- Delivery To: Patient [dropdown]
- Medium [dropdown]
- Del. Mode*: Ground [dropdown]
- Pharmacy*: (29466) Solvera Retail ... [dropdown]
- ☐ Profile Only
- ☐ Hold
- ☐ Error
- FollowUp ...: [text field with calendar icon]
- Other Details [button]

- **Filtering Capability:** A new Follow-up Date filter is now available in the filter section to improve search and retrieval.

The screenshot shows the 'Filters' section of the application. It contains various filters for searching and retrieving data. The 'FollowUp Date' filter is highlighted with a red box. The filters are organized into columns and rows, with dropdown menus and date pickers for selection.

- **Retail Workflow:** The Follow-up Date is now displayed in the Retail Workflow window for better visibility.

The screenshot shows the 'Retail Workflow' window. It displays patient information, insurance, allergy, diagnosis, notes, and alerts. The 'FollowUp Date' column is highlighted with a red box. The table below shows the data for the patient.

ed By	Checked Date	Transaction Status	PV2 Status	Last Filled	Last PickedUp On	Bill (DS)	Total Bill Qty	Pt. Resp.	Prescriber Contact	RR	RFQ	On Order	Created Date	Transaction Date	FollowUp Date
		Not Billed	Pending						8122832949	1	24	No	06/30/2026	06/30/2026	08/01/26

16. Scheduled Deliveries Screen Enhancement

Enhancements have been implemented in the **Scheduled Deliveries** screen to provide a more streamlined and user-friendly experience. These changes reduce manual effort, simplify the delivery scheduling process, and improve overall operational efficiency.

Key Enhancements:

- The **Send Delivery Via** field has been disabled to prevent unnecessary user modifications.
- The **Sequence Number** has been removed from the **Scheduled Deliveries → Header Details** section following the Store field.
- All newly created delivery batches will be assigned to the **"Default Route"** automatically.
 - **Prerequisite:** A route named **"Default Route"** must be created in the **Route Master Setup**.
- The **Driver** selection option has been hidden from the **Route Master Setup**.
- The **Assign New Delivery / Driver** functionality in the Scheduled Deliveries screen has been updated to **"Assign/Add New Queue"** to align with the updated delivery workflow.

Assign/Add New Queue Functionality

- Users can move packs from one queue to another directly from the **Scheduled Deliveries → Left Panel** view.
- For the selected packs, the system will display existing queues that match the same **Filling Partner, Delivery Mode, and Delivery To** criteria in the **Assign/Add Queue** modal under the **Select From Patient Queue** dropdown.

Assign/Add New Queue

This patient already has open queues. Please choose one to continue.

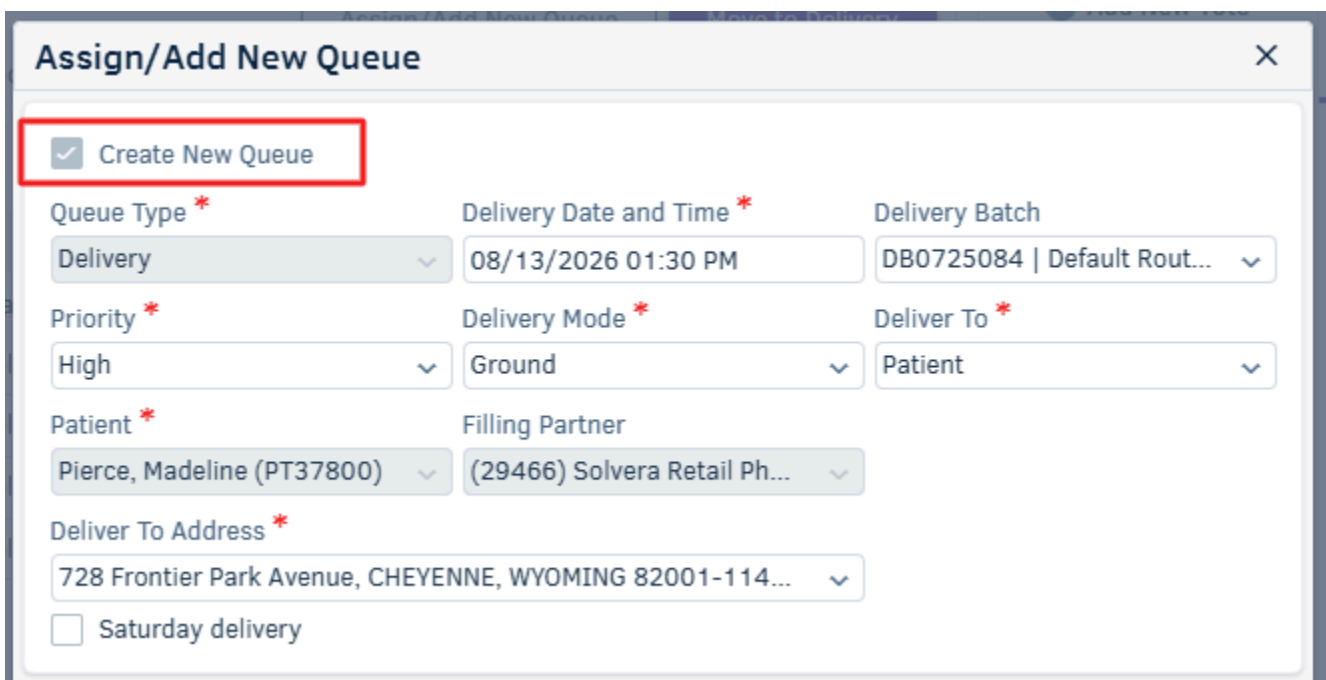

Select From Patient Queue : This field is required

☐ Create New Queue

Queue Number	Filling Partner	Deliver To	Delivery Mode	Priority	Date	Status
Q0000004688	(29466) Solvera Reta...	Patient	Ground	Urgent	08/07/26 07:24 AM	Not Filled

Close Save

- If the user prefers to create a new queue instead of moving the packs to an existing queue, they can select the **Create New Queue** checkbox.
 - When the **Create New Queue** checkbox is selected, the **Select From Patient Queue** option will be disabled, as the user has opted to create a new queue instead of assigning the packs to an existing queue.

The image shows a software modal titled "Assign/Add New Queue" with a close button (X) in the top right corner. At the top left, there is a checkbox labeled "Create New Queue" which is checked and highlighted with a red rectangular border. Below this, the form is organized into several sections with dropdown menus and text inputs, each with a red asterisk indicating a mandatory field. The first row contains "Queue Type" (set to "Delivery"), "Delivery Date and Time" (set to "08/13/2026 01:30 PM"), and "Delivery Batch" (set to "DB0725084 | Default Rout..."). The second row contains "Priority" (set to "High"), "Delivery Mode" (set to "Ground"), and "Deliver To" (set to "Patient"). The third row contains "Patient" (set to "Pierce, Madeline (PT37800)") and "Filling Partner" (set to "(29466) Solvera Retail Ph..."). Below these is a "Deliver To Address" field set to "728 Frontier Park Avenue, CHEYENNE, WYOMING 82001-114...". At the bottom left, there is an unchecked checkbox labeled "Saturday delivery".

- If no matching queue exists, the system will automatically select the **Create New Queue** option and populate the applicable mandatory details in the **Assign/Add New Queue** modal, reducing the need for manual data entry.

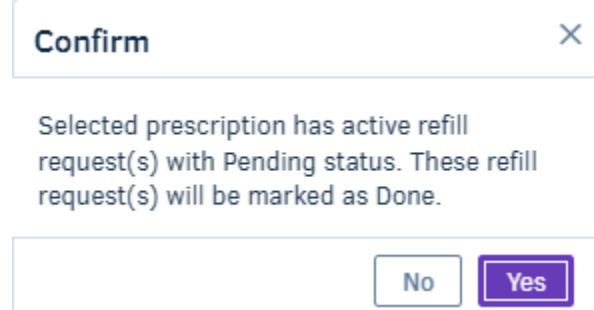

17. FSD - Refill Request Status Update for Discontinued/Changed

The Prescription Discontinuation enhancement has been implemented to automatically manage **Pending refill requests** when a prescription is **Discontinued or Changed**.

When a prescription is discontinued or changed, the system now identifies the associated refill requests with a **Pending** response status and automatically updates them to **Done**. This ensures that refill requests remain synchronized with the current prescription status and prevents discontinued / changed prescriptions from continuing through the refill workflow.

Key Enhancements

- Added an automated trigger when a prescription status is changed to **Discontinued / Changed**.
- System identifies refill requests associated with the specific **Rx Number**.
- Refill requests with **Response Status = Pending** are automatically updated to **Done**.
- Refill requests associated with other active prescriptions for the same patient remain unaffected.
- Refill requests that are already in a Response status such as **Approved / Approved with changes / Action required / Denied/Done** are not modified.
- When a patient is marked as **Inactive or Deceased**, the system marks all the active prescriptions that are with response status as pending and will be set to Done.
- Added an alert prompt before updating pending refill requests:
"Some prescription(s) have active refill requests with Pending status. These refill requests will be marked as Done."

- Maintain appropriate notes based on the prescription action:
 - **Discontinued:** "Prescription has been discontinued"
 - **Changed:** "Prescription has been changed to {New Rx}"
- The status update is a **one-way process**. Reactivating a discontinued prescription or changed medication does not revert the refill request from **Done** back to **Pending**.
- Refill requests with a response status other than **Pending** are excluded from the automatic update.

Benefits

- Reduces manual effort required to close pending refill requests after a prescription is discontinued or changed.
- Prevents staff from accidentally processing refill requests for medications that are no longer active.
- Keeps the Refill Processing workflow synchronized with the prescription's current status.
- Preserves the status and history of refill requests that are already in terminal states.
- Automatically removes obsolete pending refill requests from active processing.

18. FSD - Email Request for Phosphate Binders

The **Phosphate Binder Email Request** enhancement introduces a clinical exception in the Prescription Management / Refill Processing workflow for medications drug class classified as **Phosphate Binders**.

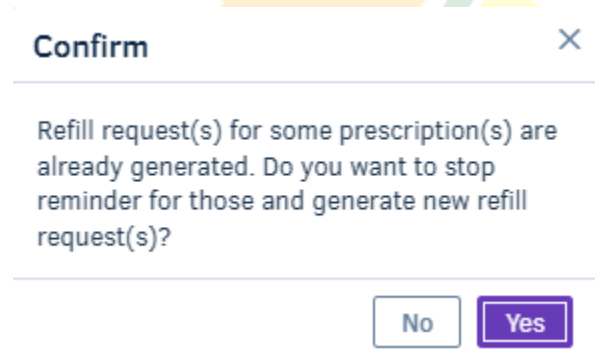

Instead of generating a standard **eScript or Fax renewal request**, the system now automatically generates an **Email notification** to the associated facility/clinic when initiating a refill request for Phosphate Binder prescription.

Key Enhancements

- Added a **Clinical Exception** to send Refill requests for prescriptions classified as **Phosphate Binders**.
- The following drug classifications are included in the email-based renewal workflow:
 - **Phosphate Binders - Iron-based**
 - **Phosphate Binders**
 - **Phosphate Binders - Calcium-based**
- Phosphate Binder prescriptions will **not generate an eScript or Fax renewal request**.
- The system generates an **Email notification** using the "**PhosphateBinder Email RefillRequest Template**" template.
- Email notifications are routed to the **Clinic/Facility Primary Email Address** stored in the Clinic/Facility Master.
- Added **Email** as a communication medium in the **Refill Request** screen and Medium dropdown.
- Email fields are automatically populated as follows:
 - **To:** Patient Facility → Patient → Primary Email Address
 - **Subject:** New Phosphorus Binder Prescription Needed
 - **Email Description:** Populated from the selected email template.

Note: The **To** field will be populated based on the following priority:

- **Patient Facility Email:** If a facility is associated with the patient, the facility's email address will be populated.
- **Patient Email:** If no patient facility is available, the patient's email address will be populated.
- **Blank:** If neither a patient facility email nor a patient email is available, the **To** field will remain blank.
- The Phosphate Binder email workflow is supported for both **automated refill queue renewal processing (Send All)** and **manual renewal process**.
- Added validation to prevent duplicate renewal requests when an existing request is in **Pending** or **Waiting Response** status.

- Existing renewal routing based on the **Original Rx Source** continues to apply for non-Phosphate Binder prescriptions:
 - **eScript Original:** eScript renewal with Fax fallback.
 - **Fax / Verbal Original:** Direct Fax renewal.
 - **Clinical Exception:** Email notification for Phosphate Binders.

Hello Clinic Partners,

The following Medication for (Reasons, Multiple Hold, ()) is expiring within 30 days or is out of refills. Please send a new prescription via eCube at your earliest convenience to prevent a gap in therapy.

Patient: Reasons, Multiple Hold
Medication: VELPHORO 500 MG CHEWABLE TAB
SIG: 1 in th emorning
Qty: 30
DS: 30

If you have any questions, Please call the pharamcy at 800-947-3131 to speak a member of the team or simply respond to this email.

Thank you,

FreseniusRx
A Fresenius Medical Care company

Pharmacy Phone: 800-847-3131 | Pharmacy Fax: 8009524488

Close

Send

Benefits

- Continuity of Care: Helps ensure timely renewal of Phosphate Binder prescriptions and reduces the risk of therapy interruption.
- Improved Communication: Automatically notifies the appropriate clinic or facility through email.
- Operational Efficiency: Eliminates manual follow-up and reduces the effort required to initiate renewal communication.

- Accurate Routing: Ensures renewal requests follow the appropriate workflow based on the Original Rx Source and drug classification.
- Reduced Errors: Automatically populates the sender, recipient, subject, and template content, minimizing manual data-entry errors.
- Streamlined Workflow: Provides a dedicated email-based workflow for Phosphate Binders while preserving the existing eScript and Fax workflows for other prescriptions.

19. Write-Off Adjustment Code Ordering Enhancement [Lisa's Request-MISC #3 Tab-Point 2]

As part of the **MISC #3 – Write-Off Adjustment Codes** enhancement, the display order of **Adjustment Codes** has been updated to improve usability and make commonly used FRxCare adjustment codes easier to locate across the application.

Key Enhancements:

- Adjustment codes included in the approved **FRxCare Adjustment Codes** list are now displayed at the top of the dropdown list.
- The remaining adjustment codes are displayed in the following order:
 - Adjustment code created from the attached sheet.
 - System-generated adjustment codes.
 - All other custom adjustment codes.
- The existing **Active/Inactive** functionality remains unchanged and continues to work as per the current application behavior.
- The updated adjustment code ordering is applied consistently across all applicable areas of the application.

Impacted Areas:

The updated adjustment code ordering is reflected in the following screens:

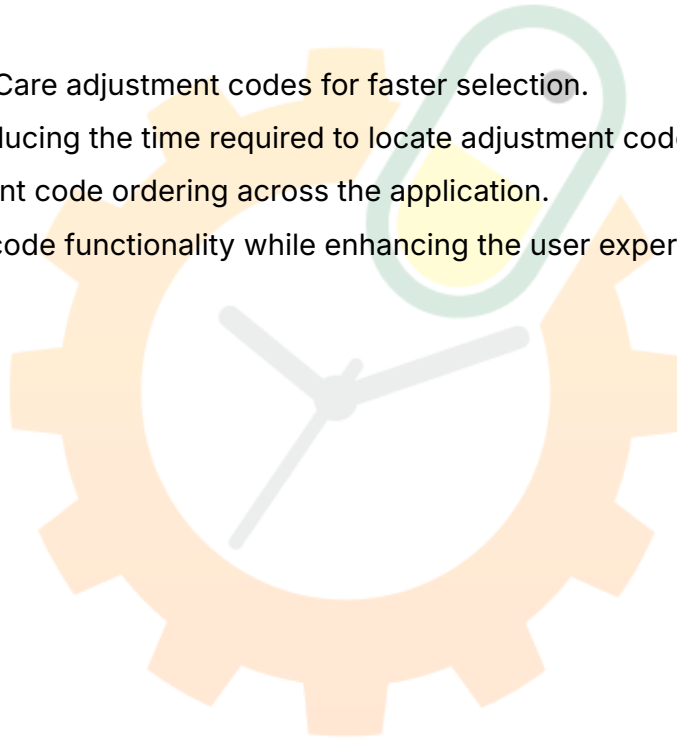

- Insurance Payment Receipt
- Patient Payment Receipt
- Accounts Receivable
- Write-Off Code Filter

Note:

- This enhancement changes only the **display order** of adjustment codes and does not change their existing functionality.
- The accompanying  Adjustment Codes for FRXCARE.xlsx document contains the list of adjustment codes that are prioritized and displayed at the top of the dropdown list.

Benefits:

- Prioritizes frequently used FRxCare adjustment codes for faster selection.
- Improves user efficiency by reducing the time required to locate adjustment codes.
- Provides a consistent adjustment code ordering across the application.
- Maintains existing adjustment code functionality while enhancing the user experience.

20. Account Receivable – Total PR Summary Enhancement [Lisa's Request - Item 13]

The **Account Receivable** detail views have been enhanced to display a **Total PR** summary in the bottom summary section. This enhancement provides users with immediate visibility into the total patient responsibility amount for the records present in the grid.

Key Enhancements:

- Added a **Total PR** summary to the bottom summary section of the following detail views:
 - Patient Receivable → Detail View
 - Patient Payment Pending → Detail View
 - Patient Payment → Detail View.
- **Total PR** is calculated as the sum of the **Total PR Amt** column for all records currently displayed in the grid after applying filters.
- The **Total PR** summary is positioned to the left of the existing **Total Receivable** summary.
- If the **Total PR Amt** column is hidden using the column toggler, the **Total PR** summary is also hidden, consistent with the existing behavior of the **Total Receivable** summary.

Total PR Amount : \$287,532.44							Total Receivable : \$285,206.69	

1 - 50 of 319 50

Benefits:

- Provides quick visibility into the total patient responsibility amount for filtered records.
- Improves financial reconciliation by displaying **Total PR** alongside **Total Receivable**.
- Delivers a consistent user experience by aligning the summary behavior with existing column visibility toggler.
- Enhances the readability and presentation of the bottom summary section.

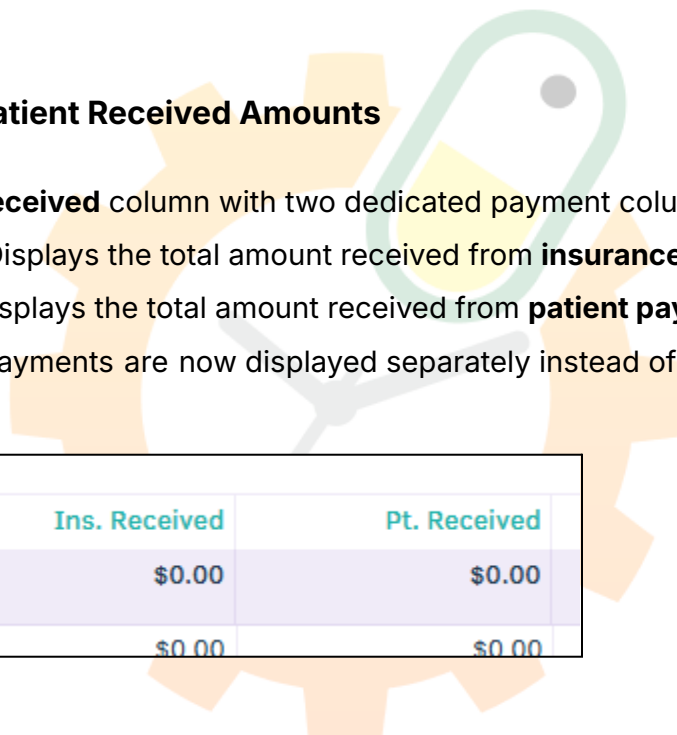

21. Patient Ledger-Insurance and Patient Received Amt Separation [Lisa's Request-Item 16]

The **Patient Ledger** has been enhanced to provide clearer visibility into payment sources by separating insurance and patient payment amounts. The existing **Received** column has been replaced with dedicated **Ins. Received** and **Pt. Received** columns, allowing users to easily distinguish between payments received from insurance and those received directly from patients.

Key Enhancements:

1. Separate Insurance and Patient Received Amounts

- Replaced the existing **Received** column with two dedicated payment columns:
 - Ins. Received** – Displays the total amount received from **insurance payments**.
 - Pt. Received** – Displays the total amount received from **patient payments**.
- Insurance and patient payments are now displayed separately instead of being combined into a single **Received** amount.

Ins. Received	Pt. Received
\$0.00	\$0.00
\$0.00	\$0.00

2. Patient Level Summary

- Updated the **Patient Level Summary** section to display:
 - Ins. Received**
 - Pt. Received**

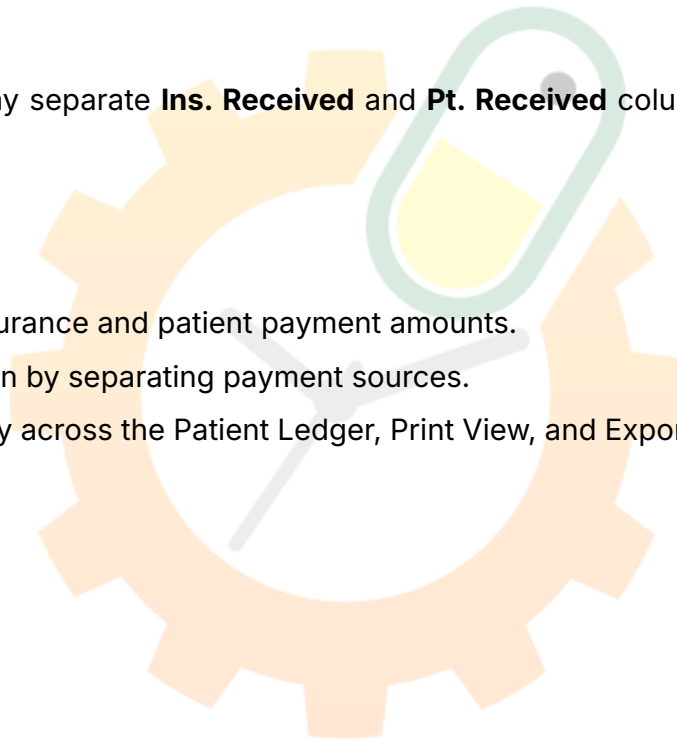

- The summary reflects the respective insurance and patient payment totals associated with the patient ledger.

3. Print View and Export File

- The payment separation is consistently reflected in all Patient Ledger output formats:
 - **Print View**
 - **Export File**
- Both outputs now display separate **Ins. Received** and **Pt. Received** columns instead of the combined **Received** column.

Benefits

- Provides clear visibility into insurance and patient payment amounts.
- Improves payment reconciliation by separating payment sources.
- Enhances reporting consistency across the Patient Ledger, Print View, and Export File.

22. Patient Ledger – Multi-Store Filter Enhancement [Lisa's Request - Item 21]

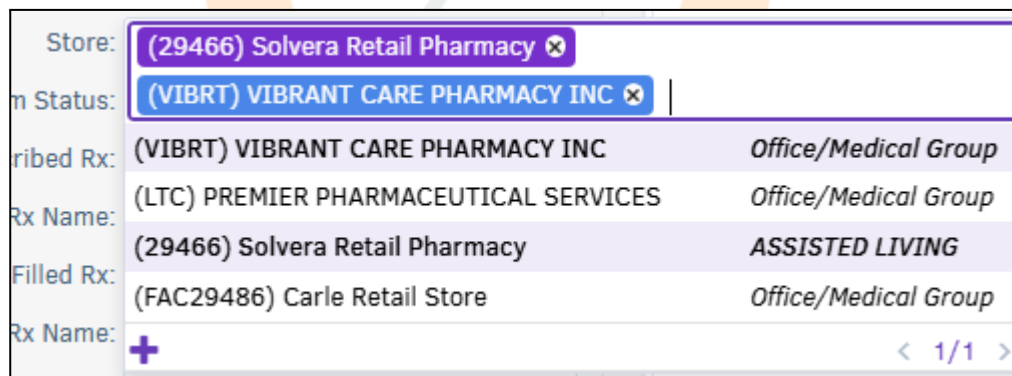

This enhancement improves the **Patient Ledger** by enabling the **Store** filter, allowing users to select and view ledger information for multiple pharmacies/stores from the Patient Ledger screen.

The enhancement addresses the requirement raised in **Lisa's email (Item 21)**, where users were unable to select multiple stores from the Patient Ledger.

Key Enhancements:

1. Store Filter Enabled in Patient Ledger

- Enabled the **Store** filter on the Patient Ledger screen.
- Users can now select **multiple stores** when filtering Patient Ledger information.
- Users can select both stores when required instead of being restricted to a single store.

The screenshot displays the 'Store' filter section of the Patient Ledger interface. It shows two selected stores: '(29466) Solvera Retail Pharmacy' and '(VIBRT) VIBRANT CARE PHARMACY INC'. Below the filter, a list of pharmacies is shown with their respective categories. The interface includes a search bar, a list of selected stores, and a table of pharmacy details.

Store:	Category
(29466) Solvera Retail Pharmacy	Office/Medical Group
(VIBRT) VIBRANT CARE PHARMACY INC	Office/Medical Group
(LTC) PREMIER PHARMACEUTICAL SERVICES	Office/Medical Group
(29466) Solvera Retail Pharmacy	ASSISTED LIVING
(FAC29486) Carle Retail Store	Office/Medical Group

2. Workflow / Data Component Update

- The multi-store filtering capability has been implemented through:

- **Workflow Setup** → Data Component: Patient Ledger
- The selected store(s) are applied when retrieving Patient Ledger information, ensuring that the displayed results correspond to the stores selected by the user.

Service/Party	Total Charges	Ins. Received	Pt. Received	W/O	Balance
08/12/26 - 930025576 - JANUVIA 100 MG TABLET(00006027782)	\$51.67	\$0.00	\$0.00	\$0.00	\$51.67
Account - Manye, Ruddle (AC38856)	\$51.67	\$0.00	\$0.00	\$0.00	\$51.67
Bill BILL609290	Total Charges: \$51.67				08/12/26 08:41 AM
07/23/26 - 930021392 - JAKAFI 5 MG TABLET(50881000560)	\$662.00	\$0.00	\$0.00	\$0.00	\$662.00
Account - Manye, Ruddle (AC38856)	\$662.00	\$0.00	\$0.00	\$0.00	\$662.00
Bill BILL611144	Total Charges: \$662.00				07/23/26 11:38 PM
07/23/26 - 930027429 - GABAPENTIN 100 MG CAPSULE(67877022205)	\$15.20	\$0.00	\$0.00	\$0.00	\$15.20
Account - Manye, Ruddle (AC38856)	\$15.20	\$0.00	\$0.00	\$0.00	\$15.20
Bill BILL611145	Total Charges: \$15.20				07/23/26 11:39 PM
05/14/26 - 930021393 - HALOPERIDOL 10 MG TABLET(68382008001)	\$33.92	\$0.00	\$0.00	\$0.00	\$33.92
Account - Manye, Ruddle (AC38856)	\$33.92	\$0.00	\$0.00	\$0.00	\$33.92
Bill BILL605969	Total Charges: \$33.92				05/14/26 12:22 AM

Benefits:

- **Improved User Experience:** Users can easily filter Patient Ledger data by one or multiple stores.
- **Multi-Store Visibility:** Allows users to review ledger information across multiple pharmacies without repeatedly changing the filter.
- **Consistent Behavior:** Aligns the Patient Ledger Store filter with existing Rx Claim and AR screen behavior.
- **Reduced Manual Effort:** Eliminates the need to review or switch between stores individually.
- **Better Workflow Efficiency:** Makes it easier for users managing patients associated with multiple pharmacies/stores to review ledger information.

23. Patient Ledger – Multi-Store Filter Enhancement [Lisa's Request - Item 26]

This enhancement addresses **Lisa's Patient Ledger Item 26** regarding the inability to find a patient from the **Florida pharmacy** when the patient has prescriptions and billing activity associated with another store, such as the **TN pharmacy**. The Patient Ledger displays billing information from other selected stores consistently with the corresponding individual screens.

Key Enhancements:

1. Cross-Store Patient Ledger Data

- The Patient Ledger can display patient billing information associated with **other selected stores**.
- When a patient has activity at multiple pharmacies/stores, selecting the applicable stores should allow the user to view the corresponding billing data.
- This includes billing information such as:
 - **Bills**
 - **Claims**
 - **Payment Receipts**

Store:	(29466) Solvera Retail Pharmacy ✕
in Status:	(VIBRT) VIBRANT CARE PHARMACY INC ✕
cribed Rx:	(VIBRT) VIBRANT CARE PHARMACY INC Office/Medical Group
Rx Name:	(LTC) PREMIER PHARMACEUTICAL SERVICES Office/Medical Group
Filled Rx:	(29466) Solvera Retail Pharmacy ASSISTED LIVING
Rx Name:	(FAC29486) Carle Retail Store Office/Medical Group
	+ < 1/1 >

2. Multi-Store Search and Filtering

- Users can select the required stores and search for the patient from the Patient Ledger.
- If the patient has data in both TN and FL pharmacies and the user selects both the pharmacies in the store filter at that time it will show the data of both the pharmacies data associated with that patient.

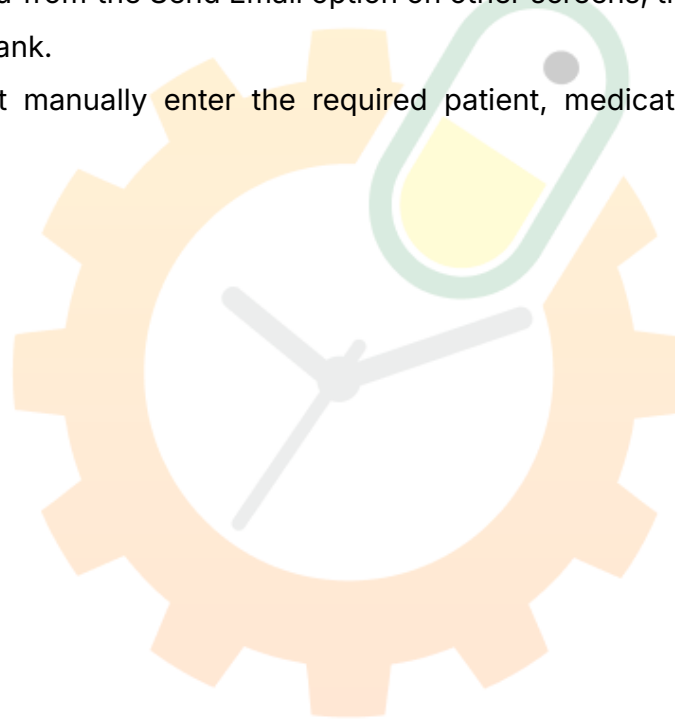

3. Cross-Store Billing Data Access

- Billing records from other stores not only will be displayed but will also be **accessible/openable from the Patient Ledger**.
- Users will be able to open the applicable:
 - Bills
 - Claims
 - Payment Receipts

24. Enable Template Selection from Every Screen Where the Send Email Option Is Available

- All system-defined email templates are now available from the Send Email option throughout the application.
- The Patient Name, Patient DOB, Medication Name, Insurance details and Logged-in Employee Name will be automatically populated only when the template is accessed from the Rx Claim screen.
- When the template is accessed from the Send Email option on other screens, these patient, medication, insurance and employee details will remain blank.
- In such cases, the user must manually enter the required patient, medication, and employee information before sending the email.

25. Template: Patient Access Network Update

A new system-defined **Patient Access Network Update** email template has been added to support manual communication with dialysis clinics when a claim is rejected with **Rejection Code 65 (Patient Not Covered)** for a Patient Access Network (PAN) plan. Users can access this workflow from **Rx Claim** → **More Options** → **Send Email** by selecting the **Patient Access Network Update** template. The system automatically populates applicable patient and logged-in employee information into the email.

Key Enhancements:

- Added a new **Patient Access Network Update** system-defined email template.
- Integrated the template into the existing **Send Email** option on the **Rx Claim** screen.

The screenshot shows the 'Rx Claim' screen for a patient named 'Willy, jack (PT37943)' with ID 'BILL612233' and claim number 'CLAIM579288'. The date is '08/07/26'. The 'Status' is 'Rejected' and the 'Priority' is 'Primary'. The 'Claim Amount' is '\$10.20'. A dropdown menu is open, showing 'Send Email' highlighted in a red box. Other options in the menu include 'Print M3P Letter' and 'Print Letters'.

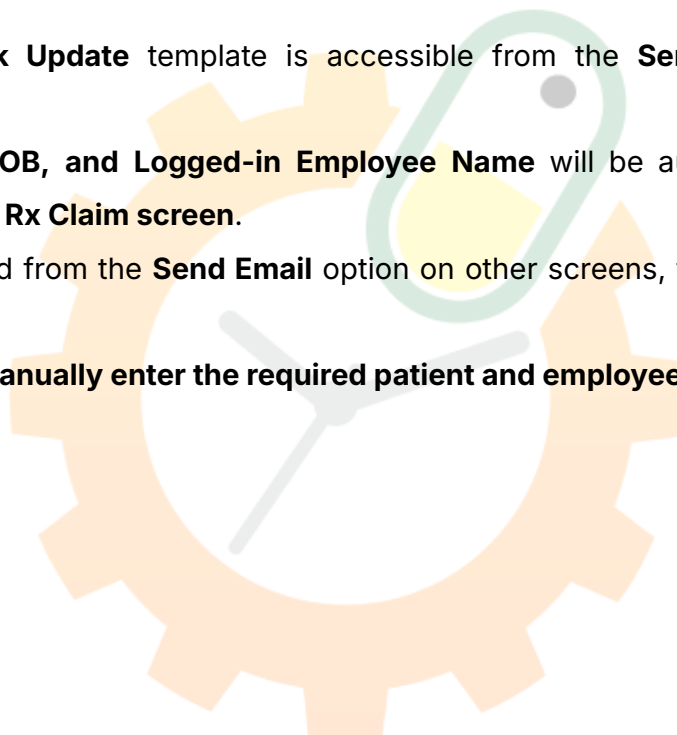

- Automatically populates:
 - Patient Name
 - Patient Date of Birth
 - Logged-in Employee Name
- Users can review and modify the email subject and body before sending.
- Email sending is a manual action; the system does not automatically generate or send emails based on Rejection Code 65.

The application does not validate or enforce **Rejection Code 65** before allowing the email to be sent. Users are responsible for verifying the applicable rejection code and PAN plan before sending the notification.

- After sending the email, users can view the sent email in **Communication History**.

Note:

- The **Patient Access Network Update** template is accessible from the **Send Email** option available across the application.
- The **Patient Name, Patient DOB, and Logged-in Employee Name** will be automatically populated **only when the template is accessed from the Rx Claim screen**.
- When the template is accessed from the **Send Email** option on other screens, these patient and employee details will **remain blank**.
- In such cases, the user must **manually enter the required patient and employee information** before sending the email.

Patient: jack Willy

Patient DOB: 08/16/2000

Hello Clinic Partners,

This notification is to inform you that the Patient Access Network (PAN) has closed for the above mutual patient. The patient may be able to apply for the following programs through the below websites.

Assistance Fund: https://enroll.tafoares.org/TAF_ProgramInformation?Id=Bs7NDkm2laeEHR4366LqHDxvXNOKiEGENhjeeUnMS35CLJBCbB4M02Pj17vqARKv

HealthWell: <https://www.healthwellfoundation.org/>

If the patient has been enrolled in one of these programs in the past, please reply to this email or fax the BIN, PCN, Group, & Card# to FreseniusRx at 800-952-4488.

If you have any questions, please call us at 1-800-847-8434

26. Template: Plan benefit Exclusion

A new system-defined **Plan Benefit Exclusion** email template has been added to support manual communication with clinic partners when a claim is rejected with **Rejection Code 70**. For claims involving a **Nephrologist prescriber**, users can access this workflow from **Rx Claim** → **More Options** → **Send Email** by selecting the **Plan Benefit Exclusion** template. The system automatically populates applicable patient, medication, and logged-in employee information into the email.

Key Enhancements:

- Added a new **Plan Benefit Exclusion** system-defined email template.
- Integrated the template into the existing **Send Email** option on the **Rx Claim** screen.

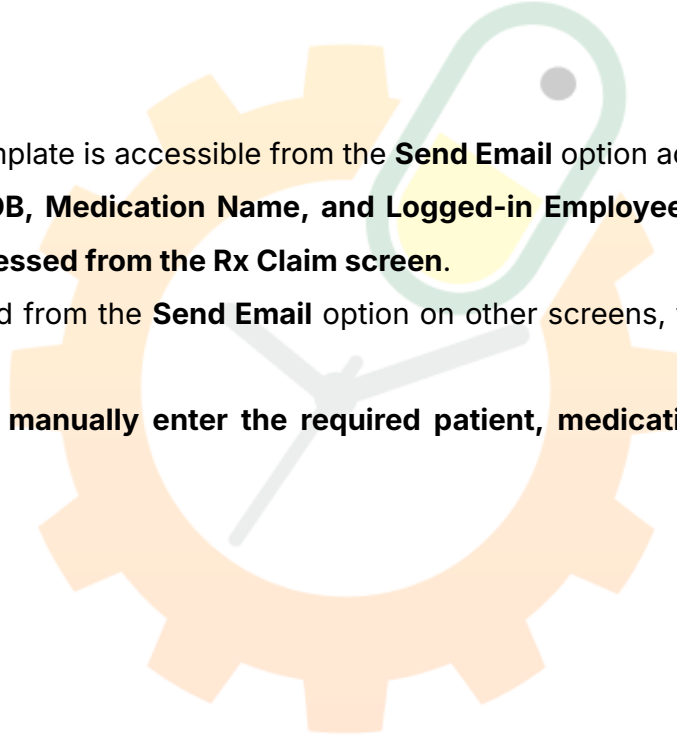

The screenshot shows the 'Rx Claim' interface for a patient named 'Willy, jack (PT37943)'. The interface includes a header with user information (BILL612233), claim number (CLAIM579288), and a date (08/07/26). Below the header, there are several fields: 'Status' (set to 'Rejected'), 'Priority' (set to 'Primary'), and 'Claim Amount' (set to '\$10.20'). A dropdown menu is open under the 'Status' field, showing options: 'Print M3P Letter', 'Send Email' (highlighted with a red box), and 'Print Letters'. The 'Send Email' option is the focus of the enhancement.

- Automatically populates:
 - Patient Name
 - Patient Date of Birth
 - Medication Name
- Logged-in Employee Name
- Medication Name is populated from the **Filled Drug Name** of the selected Rx Claim Service Line.
- Users can review and modify the email subject and body before sending.

- Email sending is a manual action; the system does not automatically generate or send emails based on **Rejection Code 70**.
- The application does not validate or enforce **Rejection Code 70** or prescriber specialty before allowing the email to be sent. Users are responsible for verifying the rejection reason and prescriber specialty.
- After sending the email, users can view the sent email in **Communication History**.

Note:

- The **Plan Benefit Exclusion** template is accessible from the **Send Email** option across applicable screens.
- The **Patient Name, Patient DOB, Medication Name, and Logged-in Employee Name** will be automatically populated **only when the template is accessed from the Rx Claim screen**.
- When the template is accessed from the **Send Email** option on other screens, these patient and employee details will **remain blank**.
- In such cases, the user must **manually enter the required patient, medication, and employee information** before sending the email.

Medication: ABILIFY 10 MG TABLET

Hello Clinic Partners,

This notification is regarding the above mutual patient. This prescription has been cancelled for a plan benefit exclusion. To ensure that our patient receives their medication timely, please have the prescriber submit a new prescription for a covered alternative.

Thank you for supporting our efforts to improve health outcomes by ensuring patients receive their medications timely.

If you have any questions, please call us at 1-800-947-3131.

Thank you,

aliya bhatt, Pharmacy Technician

27. Template: Sensipar / Cinacalcet Not Covered Under Part D

A new system-defined **Sensipar/Cinacalcet Not Covered Under Part D** email template has been added to support manual communication with clinic partners and prescribers when applicable payer rejection codes are received for **Cinacalcet (Sensipar)** claims. For FKC plans, the workflow applies to claims with rejection code(s) **52, 600, or 52, 68**, where the user determines that the patient is not FKC billable. For Humana Managed Medicare plans, the applicable rejection codes are **A4, 75, 569, 76, or A6**. Users can access this workflow from **Rx Claim → More Options → Send Email** by selecting the **Sensipar/Cinacalcet Not Covered Under Part D** template. The system automatically populates applicable patient, medication, and logged-in employee information into the email.

Key Enhancements:

- Added a new **Sensipar/Cinacalcet Not Covered Under Part D** system-defined email template.
- Integrated the template into the existing **Send Email** option on the **Rx Claim** screen.

The screenshot shows the 'Rx Claim' interface. At the top, there's a header bar with user information: 'Willy, jack (PT37943)', 'BILL612233', 'CLAIM579288', a checkmark, and the date '08/07/26'. Below this, there's a table with columns: 'Status *', 'Priority *', and 'Claim Amount *'. The 'Status *' column has a dropdown menu open, showing options: 'Print M3P Letter', 'Send Email' (highlighted with a red box), and 'Print Letters'. The 'Priority *' column has a dropdown menu with 'Primary' selected. The 'Claim Amount *' column shows '\$10.20'. There are also buttons for 'Reject' and 'Claim'.

- Automatically populates:
 - Patient Name
 - Patient Date of Birth
 - Medication Name as **Cinacalcet (Sensipar)**

- Logged-in Employee Name

- Users can review and modify the email subject and body before sending.
- Email sending is a manual action; the system does not automatically generate or send emails based on rejection codes.
- The application does not validate or enforce the specified rejection codes, payer plan, or FKC billability before allowing the email to be sent. Users are responsible for verifying the applicable rejection code, plan, and billability criteria.
- After sending the email, users can view the sent email in **Communication History**.

Note:

- The **Sensipar/Cinacalcet Not Covered Under Part D** template is accessible from the **Send Email** option across applicable screens.
- The **Patient Name, Patient DOB, Medication Name, and Logged-in Employee Name** will be automatically populated **only when the template is accessed from the Rx Claim screen**.
- When the template is accessed from the **Send Email** option on other screens, these patient and employee details will **remain blank**.
- In such cases, the user must **manually enter the required patient, medication, and employee information** before sending the email.

Patient: jack Willy

Patient DOB: 08/16/2000

Medication: Cinacalcet (Sensipar)

Hello Clinic Partners,

We have received a prescription for the above mutual patient. Due to CMS guidelines Cinacalcet (Sensipar) will no longer be separately reimbursable under the Medicare Part D benefit when administered for hemodialysis. Instead, members with ESRD may be able to continue to receive coverage for Cinacalcet (Sensipar) therapy from their dialysis center within the bundled hemodialysis payment.

Members who are receiving Cinacalcet (Sensipar) as part of their hemodialysis treatment should be referred to their prescriber to discuss treatment options.

If you have any questions, please call us at 1-800-947-3131.

28. Template: Other Insurance Coverage Primary

A new system-defined **Other Insurance Coverage Primary** email template has been added to support manual communication with clinic partners when a claim receives **Rejection Code 41 (Submit claim to Other Payor)** and the user determines, after eligibility review, that no active alternative insurance plan is available. Users can access this workflow from **Rx Claim → More Options → Send Email** by selecting the **Other Insurance Coverage Primary** template. The system automatically populates applicable patient, medication, and logged-in employee information into the email.

Key Enhancements:

- Added a new **Other Insurance Coverage Primary** system-defined email template.
- Integrated the template into the existing **Send Email** option on the **Rx Claim** screen.

The screenshot shows the 'Rx Claim' interface. At the top, there is a header bar with user information: 'Willy, jack (PT37943)', 'BILL612233', 'CLAIM579288', a checkmark, and the date '08/07/26'. Below the header, there is a table with columns: 'Status *', 'Priority *', and 'Claim Amount *'. The 'Status *' column has a dropdown menu open, showing options: 'Print M3P Letter', 'Send Email' (highlighted with a red box), and 'Print Letters'. The 'Priority *' column has a dropdown menu with 'Primary' selected. The 'Claim Amount *' column shows '\$10.20'. The 'Status *' column also has a 'Reject' button and a 'Claim' link.

- Automatically populates:
 - Patient Name
 - Patient Date of Birth
 - Medication Name
 - Logged-in Employee Name
- Medication Name is populated from the **Filled Drug Name** of the selected Rx Claim Service Line.

- The **Secondary Insurance/Provider details** are not automatically populated and must be entered manually by the user in the email body, as required by the workflow.
- Users can review and modify the email subject and body before sending.
- Email sending is a manual action; the system does not automatically generate or send emails based on **Rejection Code 41**.
- The application does not validate or enforce **Rejection Code 41** before allowing the email to be sent. Users are responsible for verifying the rejection code and completing the required eligibility review.
- After sending the email, users can view the sent email in **Communication History**.

Note:

- The **Other Insurance Coverage Primary** template is accessible from the **Send Email** option across applicable screens.
- The **Patient Name, Patient DOB, Medication Name, and Logged-in Employee Name** will be automatically populated **only when the template is accessed from the Rx Claim screen**.
- When the template is accessed from the **Send Email** option on other screens, these patient and employee details will **remain blank**.
- In such cases, the user must **manually enter the required patient, medication, employee, and secondary insurance/provider information** before sending the email.

Insurance Provider:

Insurance Phone:

Hello Clinic Partners,

This notification is regarding a pending prescription order for the above mutual patient. The insurance provider is stating the patient's insurance coverage pays secondary to a terminated [secondary provider] plan. We are seeking assistance from a social worker and or financial coordinator to see if there is another insurance plan we should be billing. The patient may need to coordinate a change with their insurance provider to become the primary rather than secondary payer. If you have obtained updated insurance information including the prescription card, please fax it to 800-952-4488.

29. Template: Dual Secondary Insurance

A new system-defined **Dual Secondary Insurance** email template has been added to support manual communication with clinic partners when an Rx Claim receives **Rejection Code 41 (Submit Claim to Other Payor)** and no additional active insurance plan is identified after eligibility review.

Users can access this workflow from **Rx Claim → More Options → Send Email** by selecting the **Dual Secondary Insurance** template. The system automatically populates applicable patient, medication, and logged-in employee information into the email.

Key Enhancements:

- Added a new **Dual Secondary Insurance** system-defined email template.
- Integrated the template into the existing **Send Email** option on the **Rx Claim** screen.

The screenshot shows the 'Rx Claim' screen for a claim with ID 'CLAIM579288'. The status is 'Rejected' with a rejection code of 'RX3'. The priority is 'Primary' and the claim amount is '\$10.20'. A dropdown menu is open, showing the 'Send Email' option highlighted with a red box. Other options in the menu include 'Print M3P Letter' and 'Print Letters'. The user 'Willy, jack (PT37943)' is logged in, and the date '08/07/26' is displayed.

- Automatically populates:
 - Patient Name
 - Patient DOB
 - Medication Name
 - Insurance Provider [manually added by user]
 - Insurance Phone [manually added by user]
 - Logged-in Employee Name

- Medication Name is populated from the **Filled Drug Name** of the selected Rx Claim Service Line.
- Secondary Insurance/Provider details are **not automatically populated** and must be entered manually by the user in the email body.
- Users can review and modify the email subject and body before sending.
- Email sending is a manual action; the system does not automatically generate or send emails based on **Rejection Code 41**.
- The application does not validate or enforce **Rejection Code 41** before allowing the email to be sent. Users are responsible for verifying the rejection code and completing the required eligibility review.
- After sending the email, users can view the sent email in **Communication History**.

Note:

- The **Dual Secondary Insurance** template is available from the **Send Email** option on the applicable screens.
- Patient, medication, and employee information is automatically populated when the template is accessed from the **Rx Claim** screen.
- When the template is accessed from the **Send Email** option on other screens, these patient and employee details will **remain blank**.
- In such cases, the user must **manually enter the required patient, medication, employee, and secondary insurance/provider information** before sending the email.

30. Template: HealthWell Assistance Program Update

A new system-defined **Patient HealthWell Program Update** email template has been added to support manual communication with clinic partners when an Rx Claim billed **against a Patient HealthWell Plan** receives **Rejection Code 65 (Patient is Not Covered)**.

Users can access this workflow from **Rx Claim → More Options → Send Email** by selecting the **Patient HealthWell Program Update** template. The system automatically populates applicable patient, medication, dosage, and logged-in employee information into the email.

Key Enhancements:

- Added a new **Patient HealthWell Program Update** system-defined email template.
- Integrated the template into the existing **Send Email** option on the Rx Claim screen.

The screenshot shows the Rx Claim screen for a patient named Willy, jack (PT37943). The screen displays various fields including Status, Priority, Claim Amount, and a dropdown menu for 'Send Email'. The 'Send Email' option is highlighted with a red box. The 'Status' dropdown is currently set to 'Rejecte' and the 'Priority' dropdown is set to 'Primary'. The 'Claim Amount' is \$10.20. The date 08/07/26 is displayed in the top right corner. The 'Send Email' dropdown menu is open, showing options like 'Print M3P Letter', 'Send Email', and 'Print Letters'.

- Automatically populates:
 - Patient Name
 - Patient DOB
 - Medication Name
 - Dosage

- Logged-in Employee Name
- Medication Name is populated from the **Filled Drug Name** of the selected Rx Claim Service Line.
- Dosage is populated from the Total Billed Qty.
- Users can review and modify the email content before sending.
- Email sending is a manual action; the system does not automatically generate or send emails based on **Rejection Code 65**.
- After sending the email, users can view the sent email in **Communication History**.

Note:

- The **Patient HealthWell Program Update** template is available from the Send Email option on the applicable screens.
- Patient, medication, dosage, and employee information is automatically populated when the template is accessed from the **Rx Claim** screen.
- When the template is accessed from the **Send Email** option on other screens, these patient and employee details will **remain blank**.
- In such cases, the user must **manually enter the required patient, medication, and employee information** before sending the email.

Patient: jack Willy

Patient DOB: 08/16/2000

Medication: ABILIFY 10 MG TABLET

Hello Clinic Partners,

This notification is for the above mutual patient. The HealthWell Foundation financial assistance program has been updated. The patient's grant still has funding available, however, it is only accessible through a patient reimbursement form sent directly to Healthwell by the patient. The pharmacy card has been inactivated and the pharmacy is no longer able to bill the Healthwell grant. Please assist the patient by calling HealthWell at 800-675-8416 with any questions. The medication can be processed at the pharmacy level with the primary insurance only and the patient will be contacted regarding the Copay Amount.

If you have any questions, please call us 1-800-947-3131.

Thank you,

Robin Roy, Pharmacist

31. Template: MD Kidney Disease Assistance Program Update

A new system-defined **MD Kidney Disease Assistance Program Update** email template has been added to support manual communication with clinic partners when a claim billed to the **Maryland Kidney Disease Program (MD KDP)** receives **Rejection Code 69**. Users can access this workflow from **Rx Claim → More Options → Send Email** by selecting the **MD Kidney Disease Assistance Program Update** template. The system automatically populates applicable patient, medication, and logged-in employee information into the email.

Key Enhancements:

- Added a new **MD Kidney Disease Assistance Program Update** system-defined email template.
- Integrated the template into the existing **Send Email** option on the **Rx Claim** screen.

The screenshot shows the 'Rx Claim' screen for a claim with ID CLAIM579288. The user is 'Willy, jack (PT37943)' and the date is 08/07/26. The claim status is 'Rejected' with a rejection code of 'RX3'. The priority is 'Primary' and the claim amount is '\$10.20'. A dropdown menu is open under the 'Status' field, showing options: 'Print M3P Letter', 'Send Email' (highlighted with a red box), and 'Print Letters'. The 'Send Email' option is the focus of the enhancement.

- Automatically populates:
 - Patient Name
 - Patient Date of Birth
 - Medication Name
 - Logged-in Employee Name
- Medication Name is populated from the **Filled Drug Name** of the selected Rx Claim Service Line.
- Users can review and modify the email subject and body before sending.
- **Copay Amount is not automatically populated.** Users must manually enter the Copay Amount before sending the email.

- **From** and **To** email addresses are selected or entered manually by the user.
- Email sending is a manual action; the system does not automatically generate or send emails based on **Rejection Code 69**.
- After sending the email, users can view the sent email in **Communication History**.

Note:

- The **MD Kidney Disease Assistance Program Update** template is accessible from the **Send Email** option across applicable screens.
- The **Patient Name, Patient DOB, Medication Name, and Logged-in Employee Name** will be automatically populated **only when the template is accessed from the Rx Claim screen**.
- When the template is accessed from the **Send Email** option on other screens, these patient and employee details will **remain blank**.
- In such cases, the user must **manually enter the required patient, medication, and employee information** before sending the email.
- The **Copay Amount must be manually entered by the user** before sending the email, regardless of the screen from which the template is accessed.

Hello Clinic Partners,

This is a notification to let you know the above mutual patient's Maryland Kidney Disease Program (MD KDP) financial assistance has expired. We would appreciate your assistance in helping the patient re-enroll. We have placed the medication on hold and will reprocess once reenrolled. If it should take more than 4 business days to renew the MD KDP, the medication will be processed with the primary insurance plan only and the patient will be contacted regarding the Copay Amount of [Copay Amount].

If you have any questions, please call us at 1-800-947-3131.

Thank you,
aliya bhatt, Pharmacy Technician

32. Template: PA CRDP Assistance Program Update

A new system-defined **PA CRDP Assistance Program Update** email template has been added to support manual communication with clinic partners when a claim billed to the **Pennsylvania Chronic Renal Disease Program (PA CRDP)** receives **Rejection Code 69**. Users can access this workflow from **Rx Claim → More Options → Send Email** by selecting the **PA CRDP Assistance Program Update** template. The system automatically populates applicable patient, medication, and logged-in employee information into the email.

Key Enhancements:

- Added a new **PA CRDP Assistance Program Update** system-defined email template.
- Integrated the template into the existing **Send Email** option on the **Rx Claim** screen.

The screenshot shows the 'Rx Claim' screen for a patient named 'Willy, jack (PT37943)' with ID 'BILL612233' and claim number 'CLAIM579288'. The date is '08/07/26'. The 'Status' is 'Rejected' and the 'Priority' is 'Primary'. The 'Claim Amount' is '\$10.20'. A dropdown menu is open under the 'Status' field, showing options: 'Print M3P Letter', 'Send Email' (highlighted with a red box), and 'Print Letters'. The 'Send Email' option is the focus of the enhancement.

- Automatically populates:
 - Patient Name
 - Patient Date of Birth
 - Medication Name
 - Logged-in Employee Name
- Medication Name is populated from the **Filled Drug Name** of the selected Rx Claim Service Line.
- Users can review and modify the email subject and body before sending.
- **Copay Amount is not automatically populated.** Users must manually enter the Copay Amount before sending the email.

- **From** and **To** email addresses are selected or entered manually by the user.
- Email sending is a manual action; the system does not automatically generate or send emails based on **Rejection Code 69**.
- After sending the email, users can view the sent email in **Communication History**.

Note:

- The **PA CRDP Assistance Program Update** template is accessible from the **Send Email** option across applicable screens.
- The **Patient Name, Patient DOB, Medication Name, and Logged-in Employee Name** will be automatically populated **only when the template is accessed from the Rx Claim screen**.
- When the template is accessed from the **Send Email** option on other screens, these patient and employee details will **remain blank**.
- In such cases, the user must **manually enter the required patient, medication, and employee information** before sending the email.
- The **Copay Amount must be manually entered by the user** before sending the email, regardless of the screen from which the template is accessed.

33. Template: Specialty Pharmacy Required

A new system-defined **Specialty Pharmacy Required** email template has been added to support manual communication with clinic partners when an Rx Claim receives **Rejection Code 4W (Specialty Pharmacy Required)**. Users can access this workflow from **Rx Claim → More Options → Send Email** by selecting the **Specialty Pharmacy Required** template. The system automatically populates applicable patient, medication, insurance, and logged-in employee information into the email.

Key Enhancements:

- Added a new **Specialty Pharmacy Required** system-defined email template.
- Integrated the template into the existing **Send Email** option on the **Rx Claim** screen.

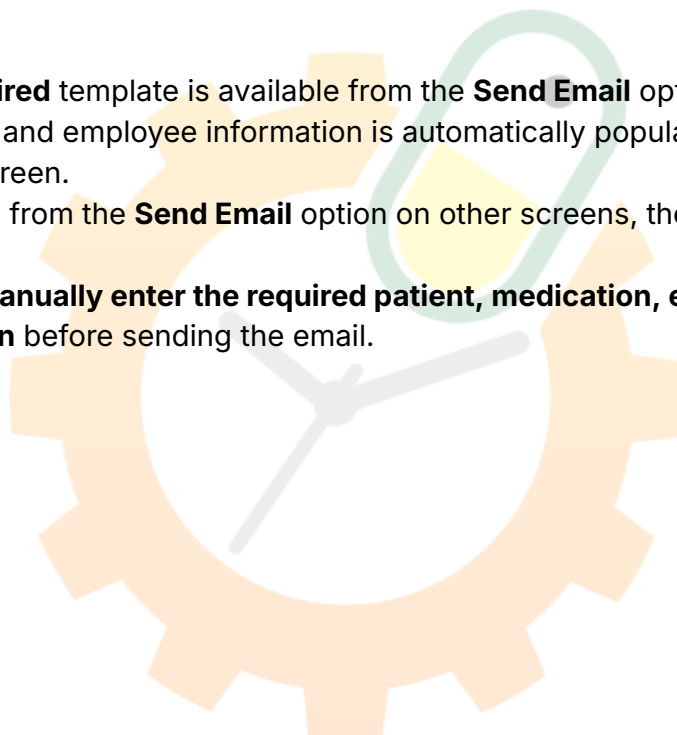

The screenshot shows the 'Rx Claim' screen for a patient named 'Willy, jack (PT37943)'. The screen displays various fields including 'Status' (Rejected), 'Priority' (Primary), and 'Claim Amount' (\$10.20). A dropdown menu is open, showing the 'Send Email' option highlighted with a red box. Other options in the menu include 'Print M3P Letter', 'Print Letters', and 'Claim'. The background features a large orange gear icon.

- Automatically populates:
 - Patient Name
 - Patient DOB
 - Medication Name
 - Dosage
 - Insurance Provider
 - Insurance Phone
 - Logged-in Employee Name
- Medication Name is populated from the **Filled Drug Name** of the selected Rx Claim Service Line.

- Insurance Provider and phone number are populated from the latest rejected insurance party with **Rejection Code 4W**.
- Users can review and modify the email subject and body before sending.
- Email sending is a manual action; the system does not automatically generate or send emails based on **Rejection Code 4W**.
- After sending the email, users can view the sent email in **Communication History**.

Note:

- The **Specialty Pharmacy Required** template is available from the **Send Email** option on the applicable screens.
- Patient, medication, insurance, and employee information is automatically populated when the template is accessed from the **Rx Claim** screen.
- When the template is accessed from the **Send Email** option on other screens, these patient, insurance and employee details will **remain blank**.
- In such cases, the user must **manually enter the required patient, medication, employee, and secondary insurance/provider information** before sending the email.

Hello Clinic Partners,

We have a prescription pending for the above mutual patient. Their prescription plan requires the medication to be filled through a specialty pharmacy. We have cancelled the prescription in our system. The specialty pharmacy may contact us to transfer the prescription to them, or the prescriber can send a new prescription to that pharmacy. The patient may also contact their insurance plan and speak with member services to further assist them with obtaining this medication.

Please note that the patient may be able to fill other medications through FreseniusRx. Specialty Pharmacy requirements are specific to the medication. If a patient is unable to fill a specific hindered medication due to a Specialty Pharmacy requirement, they may still be able to fill other

34. Template: Mail Order Pharmacy Required

A new system-defined **Mail Order Pharmacy Required** email template has been added to support manual communication with clinic partners when an Rx Claim receives **Rejection Code AD**.

Users can access this workflow from **Rx Claim → More Options → Send Email** by selecting the **Mail Order Pharmacy Required** template. The system automatically populates applicable patient, medication, insurance, and logged-in employee information into the email.

Key Enhancements:

- Added a new **Mail Order Pharmacy Required** system-defined email template.
- Integrated the template into the existing **Send Email** option on the **Rx Claim** screen.

The screenshot displays the 'Rx Claim' interface for a patient named 'Willy, jack (PT37943)'. The interface includes a header with user information (BILL612233), claim number (CLAIM579288), a checkmark, and a date (08/07/26). Below the header, there are several fields: 'Status' (with a dropdown menu open showing 'Print M3P Letter' and 'Send Email' highlighted in a red box), 'Priority' (set to 'Primary'), and 'Claim Amount' (\$10.20). The 'Status' dropdown is also labeled 'Rejection Code' and 'RX3'. At the bottom, there are links for 'Claim' and 'Print Letters'.

- Automatically populates:
 - Patient Name
 - Patient DOB
 - Medication Name
 - Dosage
 - Insurance Provider

- Insurance Phone
- Logged-in Employee Name
- Medication Name is populated from the **Filled Drug Name** of the selected Rx Claim Service Line.
- Insurance Provider is populated from the latest rejected insurance party with **Rejection Code AD**.
- Insurance Phone is populated from the primary phone number of the auto-populated insurance plan, when available.
- Email sending is a manual action; the system does not automatically generate or send emails based on **Rejection Code AD**.
- After sending the email, users can view the sent email in **Communication History**.

Note:

- The **Mail Order Pharmacy Required** template is available from the **Send Email** option on the applicable screens.
- Patient, medication, insurance, and employee information is automatically populated when the template is accessed from the **Rx Claim** screen.
- When the template is accessed from the **Send Email** option on other screens, these patient and employee details will **remain blank**.
- In such cases, the user must **manually enter the required patient, medication, employee, and secondary insurance/provider information** before sending the email.

35. Template: Patient Specific Pharmacy Required

A new system-defined **Patient Specific Pharmacy Required** email template has been added to support manual communication with clinic partners when an Rx Claim receives **Rejection Code 980 or M2**.

Users can access this workflow from **Rx Claim → More Options → Send Email** by selecting the **Patient Specific Pharmacy Required** template. The system automatically populates applicable patient, medication, and logged-in employee information into the email.

Key Enhancements:

- Added a new **Patient Specific Pharmacy Required** system-defined email template.
- Integrated the template into the existing **Send Email** option on the **Rx Claim** screen.

The screenshot displays the 'Rx Claim' interface for a patient named 'Willy, jack (PT37943)'. The interface includes a header with user information (BILL612233), claim number (CLAIM579288), a checkmark, and a date (08/07/26). Below the header, there are fields for 'Status *', 'Priority *', and 'Claim Amount *'. The 'Status *' field is set to 'Rejected' and has a dropdown menu open showing 'Print M3P Letter' and 'Send Email' (highlighted with a red box). The 'Priority *' field is set to 'Primary' and the 'Claim Amount *' field shows '\$10.20'. At the bottom left, there is a 'Claim' button and a 'Print Letters' button.

- Automatically populates:
 - Patient Name
 - Patient DOB
 - Medication Name
 - Dosage
 - Pharmacy Name, when applicable

- Logged-in Employee Name
- Medication Name is populated from the **Filled Drug Name** of the selected Rx Claim Service Line.
- Pharmacy Name in the email body will be entered by the user manually.
- Email sending is a manual action; the system does not automatically generate or send emails based on **Rejection Code 980 or M2**.
- After sending the email, users can view the sent email in **Communication History**.

Note:

- The **Patient Specific Pharmacy Required** template is available from the **Send Email** option on the applicable screens.
- Patient, medication, pharmacy, and employee information is automatically populated when the template is accessed from the **Rx Claim** screen.
- When the template is accessed from the **Send Email** option on other screens, these patient and employee details will **remain blank**.
- In such cases, the user must **manually enter the required patient, medication and employee** before sending the email.

36. Filling Partner pricing validation:

Pricing validation has been enhanced during **Rx Typing** to ensure that the required pricing is available for the selected **NDC** and **filling partner** before the Rx can proceed for fulfillment. The system validates the applicable pricing based on whether the Rx is routed to a **Remote** or **External Filling Partner**.

- **Remote Filling Partner:** If a remote filling partner is selected and pricing is not available for the selected NDC in the drug master of filling partner, the system will display a prompt. The user can navigate to **Drug Master** and add the required pricing. Once pricing is added, the user can proceed with the Rx.

- If the user skips the pricing entry, the Rx will still be saved but will be placed **On Hold** until the required pricing is available.

Hold Date *: 08/12/26 To By: support

Hold Reason *: Waiting on Insurance

Hold Note:

> Other Details

> Summary Section

Created By: support on 08/12/26 10:55 AM

Last refill Approved on 08/12/26 by -, Jorge

WI Hold P&T App. Req.

Reset Delete Bill Verify Save Save & New

- **External Filling Partner:** Similarly, If an external filling partner is selected and pricing is not available for the selected NDC in the **Consigned NDC** screen, the system will display the same prompt and redirect the user to the Consigned NDC screen, where the required pricing can be added.
- If the user skips the pricing entry, the Rx will be saved but will be placed **On Hold** until the required pricing is available.
- During **Auto Rx Typing**, if pricing is not available for the selected NDC, the Rx will be **saved and placed On Hold**. This allows the Rx to be retained while preventing it from proceeding until the required pricing is available.

Upcoming Release: In the upcoming release, the **Hold Reason** will be updated to **"Filling partner inventory unavailable"** when an Rx is placed on hold due to the unavailability of pricing detail at the selected filling partner.

37. Dosage check Enhancements based on the patient's age.

The Dosage Check validation has been enhanced to provide more accurate dosage recommendations based on the patient's age. Previously, for **Lasix 20 mg Tablet**, the system incorrectly displayed a minimum required dosage of **250 mg**, which was not clinically appropriate.

In the current build, the patient's **age is passed as part of the Dosage Check request**, allowing the system to evaluate dosage criteria applicable to the patient's age group.

Key Enhancements

- Added **patient age** as an input parameter for the Dosage Check validation.
- The system now evaluates dosage checks based on the applicable **age-specific dosage criteria**.
- For **Lasix 20 mg Tablet**, the Dosage Check now provides the following age-based dosage information:
 - **Minimum dosage:** 5.22 mg
 - **Maximum frequency:** 6 times per day
- Corrected the previous incorrect minimum dosage validation of **250 mg**.
- Dosage alerts are now generated based on the patient's age and the corresponding dosage criteria.

Benefits

- Improves the **accuracy of dosage check alerts**.
- Prevents incorrect dosage warnings caused by applying non-age-specific criteria.
- Provides **patient-specific dosage validation** based on age.
- Helps users make safer and more clinically appropriate prescribing decisions.
- Reduces false-positive dosage alerts and improves the overall reliability of the Dosage Check functionality.

38. Implementation of Multiple Hold Reason Support for Rx

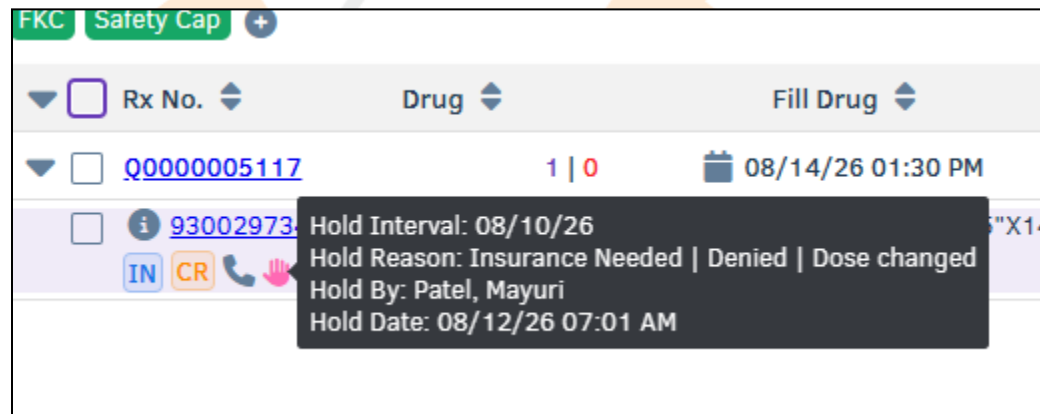

We have enhanced the Rx hold functionality to support **multiple hold reasons** for a single Rx. This allows users to clearly identify all applicable reasons why an Rx is currently on hold.

Along with multiple hold reason support, we have also improved the **Drug History** window to maintain and display a proper history of hold and unhold activities.

Key enhancements:

Multiple hold reasons:

- Users can now add and maintain multiple hold reasons for an Rx.
- Automatic hold conditions are also supported along with manually added hold reasons.
- Each applicable hold reason will be retained until the corresponding condition is resolved.
- The Hold icon will display all applicable hold reasons when the user hovers over it.

Example:

If an Rx has an automatic hold condition of Insurance Needed, and the user attempts to bill an OTC Rx up to \$250, an additional hold reason such as OTC Outstanding Balance will be added.

The Rx will therefore display both:

- Insurance Needed
- OTC Outstanding Balance

Auto Hold After Unhold:

- When an Rx is automatically unheld because the **Hold-To date has passed**, the system will re-evaluate all applicable automatic hold conditions.
- If any automatic hold condition is still active, the system will automatically place the Rx back on hold.
- The Rx will be placed on hold with the **appropriate hold reason** based on the active automatic hold condition.

Example:

If an Rx is placed on hold until a specific Hold-To date and the date expires, the system will automatically unhold the Rx. If the Insurance Needed condition is still applicable at that time, the system will automatically place the Rx back on hold with Insurance Needed as the hold reason.

Drug History Enhancement:

The **Drug History** window has been enhanced to provide a proper history of hold and unhold actions, including the applicable hold reasons.

This provides better visibility and traceability of changes made to an Rx's hold status.

This window can be accessed from multiple locations, including:

- Retail Workflow → Right-click options
- Rx Typing → More Options
- Patient Module → Prescriptions → Options → Drug History

Drug History

39. Sig description to be mandatory on prescription

The **SIG Description** validation has been enhanced to ensure that a prescription cannot be created without entering a SIG Description. This validation is now applied consistently across both the **Rx Typing** and **Prescription Bulk Entry** screens.

Key Enhancements

- Made the **SIG Description** field mandatory while creating a prescription from the **Rx Typing** screen.
- Added the same mandatory validation for **SIG Description** in the **Prescription Bulk Entry** screen.
- The system will prevent prescription creation when the **SIG Description** is not provided.
- Applied consistent SIG Description validation across both prescription entry workflows.
- If value not added system will throw the tooltip as 'SIG is Required'

Prescription Bulk Entry:

Drug *	DAW	Sig *	Description
JAKAFI 5 MG TABLET (50881000560)	0-No Selection		Mouth In

- An export and print button has been added to both inventory tracking and inventory detail screens

During GRN creation, if an **expired lot** is received, the system will display a prompt alerting the user that an expired item has been received.

The corresponding expired lot will also be **highlighted in the GRN** to make it easily identifiable and allow the user to take the necessary action.

Goats Received Note (GRN)

UPC-Based Inventory Tracking

Inventory tracking has been enhanced to support UPC-based inventory management for custom drugs where an NDC is not available but a UPC is available.

- During **GRN creation**, the UPC barcode can be scanned or manually entered in the **Scan Matrix** field.

Create GRN

PO Number: APO00042 GRN Number: GRN00000156 Status:

Scan Matrix: 305730161200 NDC:

NDC	UPC	Drug	Ordered Pack	Ordered Qua...	Price/Pack	Actual Cost/Pack	Actual Quantity/Pack	Received Qu...	Discarded Q...	Pack Receiv...	Lot Number	Expiration Date	Lot Quantity	Purchase Cost
	3057301612...	Advil Liqui-Gels	1	100	10	10	1	0					0	0

- For UPC-based items, **Lot Number** and **Expiration Date** will be entered manually during GRN creation.
- The system will maintain and track inventory based on the **UPC** when an NDC is unavailable.

- In **Inventory Tracking**, users can search for the item using the **Drug Name** to view the corresponding inventory details.

41. Removed Hold Validation When Adding Insurance

The hold validation that was triggered when a user added insurance and prompted the user to remove eligible prescriptions from hold has been removed from the insurance addition workflow.

Key Enhancements:

- When insurance is added to the patient profile, the system will no longer perform the Rx hold validation.
- The system will no longer prompt the user to remove prescriptions from hold as part of the insurance addition process.
- Adding insurance can now be completed without triggering an Rx unhold prompt.
- Users will need to manually unhold the prescriptions.
